THE NIGHTINGALE IN NATURE AND CAPTIVITY.

(Continued from page 199.)

By the kindness of a reader, Mr. O. S. Manners, Stapleford, Notts., we are enabled to republish the following interesting article, which appeared in a work published in 1799. The wording is reproduced exactly as printed, and we have thought it as well to add an occasional foot note.

How to Bring Up Young Nightingales Without the Cock or Hen.

GET a nest of the first layer, as being the most stout and vigorous birds, the best singers, and the least liable to fail in their moulting. You must not take the nest till the birds are pretty strong, and when taken, they should be carried home in a dark basket, with only a few breathing holes. It is a nice point to feed them properly, for to give them too much or too little is equally dangerous. Their gaping wide is no indication that they want victuals, for this they will do whenever you come nigh them, or touch their nest; provided you understand well their language, their cry would be the most significant token; but if you do not, it will be the best to observe the following directions.

About half an hour after sun-rising, give them their first feed, the second an hour after, and so on by the hour till sun-set; the last feed should be somewhat more plentiful than the rest. They should be fed by a skewer flatted at the end; give them but four mouthfuls at a time, though they would take more; you must take care not to mistake one for another, else some may be starved and others ready to burst.

At a month's end, or sooner, if they are of the first lay, they will be able to feed themselves, which you may know by presenting a small meal-worm to them; you may then separate them in different cages.

The young ones being so far brought up, you may, for perfecting their song, carry them into the country to hear the old Nightingales sing, else they will scarce answer the trouble which you have taken about them.

There is, however, another, and more easy way, for such as are already provided with old Nightingales taken with the trap, and kept a whole twelvemonth or longer; it is this:

Take a nest of young ones, and place them in the same chamber with an old Nightingale. Begin to feed the young ones with the skewer, and leave the old one's cage open day and night, taking care to place a small pot of the young one's meat close to his own feeding-trough; if you suffer the young ones to cry a little while, before you go to feed them, you soon will perceive the old bird go out of his cage, chirp to the young ones, fill his bill with their meat and feed them.

When in the morning you find that he has been distributing meat to the young ones, you may entirely entrust him with that business; for when once he has undertaken it, he will feed them till they can feed themselves, or you may afterwards have the pleasure of seeing them eat with him at the same pot, and follow him into the cage; you then put them in separate cages. By this method you will save yourself a good deal of trouble and fatigue. The old bird will take as good or better care of them than you can, and besides, will teach them to sing.

If you choose to bring them up in this way, it will be best to provide yourself with a hen, and keep her a whole year in a cage, in order to be a nurse; under which management she never fails to prove one; whereas a cock often fails in this point, nor doth he sing whilst engaged.

Of Teaching Young Nightingales Tunes by Whistling or by the Flageolet.

A Nightingale is possessed of such a variety of modulations of voice that he is of all other birds the best qualified for learning and performing different sorts of tunes; and though it must be allowed his natural song outdoes anything that can be added to it by art, yet if you would, out of curiosity, teach him a tune or two, you must proceed after the following manner.

Perceiving, by the chirping of a young one, that he is a cock, put him into a cage covered with green serge, and let him hang in a chamber, quite out of the hearing of Nightingales, as well as other birds; let him for the first week be kept near the window, or the lightest part of the room; then remove him by degrees backward to the darkest part, where you let him remain all the time of his learning; nor must he be annoyed or diverted by any kind of noise whatever, nor disturbed by people coming near him.

His tune should not be whistled or piped to him too often; half a dozen lessons a day will be sufficient, two in the morning, two at noon, and two in the evening. Two several tunes are enough for one bird. The flageolet should be of the softest and mellowest tone, and not of too high a pitch.

You ought not to be discouraged, though you have constantly kept on whistling or piping to a bird, even to his moulting time, without hearing anything from him in return, but only a little chirping. The bird's voice is seldom formed before ensuing spring, and therefore his lesson should be continued without intermission. When that season arrives, you will, with an agreeable surprise, find that your scholar has not forgot his instructions.

It has been observed that it is naturally more easy for a Nightingale to learn to sing than to speak; however, we have an instance related by Pliny of talking Nightingales; he assures us that the Emperor Clandius's children had some which spoke Greek and Latin, and had some new discourse every day; he adds, that to bring them up to this they must be instructed in secret, where they can hear none but their teacher's voice.*

How to Make Nightingales Resort to Places Unfrequented by Them Before.

Find a nest in the month of May, of the first layer, but do not take it till the young ones are at least a week old; then go early in the morning, and set two traps, baited with meal-worms, near the nest, and you will easily get father and mother in your possession in less than an hour; when you have caught them, put them in separate silk bags, and so bring them to the place where you design to fix them.

Take also with you two small square cages, covered with thick green serge, without wires or perches. In taking the nest, do not separate it from the branches which support it, but cut them off, and bring away the nest and them, together; and it will be best to remove the whole tree if it be a small one.

Having brought it to the intended place, plant it in the same aspect as before; the nest you are to cover with wool or cotton in the transporting, to keep the young ones from getting out, or taking cold.

Having fixed the nest, place the two cages, with an old one in each, so that the nest may be between them, at twenty or thirty paces distance, and let the doors of the cages be turned towards the nest. To each door must be fastened a thread forty or fifty yards long, whose ends you hold together in your hands, and concealing yourself behind some tree or hedge, pull open the doors, and suffer the old ones to escape from their cages, with the following precautions, viz., let the young ones grow hungry and chirp for their food, before you let the old ones escape, who then will readily find them; release the hen first, and afterwards the cock; then carry off the cages as quietly as you can, and come no more there that day. Thus from your window you may entertain yourself with the pleasure of seeing the old ones bring up their young, which will themselves be sure to breed upon the same spot the next year.†

Of the Tokens of Health and Sickness in Nightingales, and How to Cure Them.

A Nightingale may be looked upon to be in a good state of health: 1. If he sings much 2. If he often feathers himself. 3. If he be brisk and alert, and jerks his wings much. 4. If he roosts on one leg only, and is greedy of meal-worms; but when on the contrary, a Nightingale sleeps on his belly at the bottom of his cage, it is a sign he is either sick or sullen, provided his feet are not clogged up with dung; in which case a little warm water in a saucer placed in his cage soon relieves him.

Sometimes a little imposthume is on the bird's rump, which should be snipped with the point of a pair of scissors, and the matter squeezed out, giving him a few meal-worms to cherish him, or a spider or two, which never should be omitted at the beginning of March, be they sick or well; if he grows lean through his singing, mix poppy-seeds in his meat.

When his song and moulting is over, he is apt to grow fat, then you forbear giving him any poppy-seeds. If he be very lean, feed him with raw sheep's heart, well cleared of all its skin and fat; mince it very small, and mix it with an equal quantity of the paste hereafter described. If he be bound up, give him four or five meal-worms; and if he dungs too loose and often, sheep's heart and poppy-seeds will bring him to rights.

The cramp often afflicts them, which, if it once attacks a young one, it is sure to kill him; in old ones it is generally occasioned by being too much exposed to the cold, and a warmer place will cure them.

There is an odd disorder which this bird is very liable to, and may be called the falling sickness; after a few precipitate motions, he will drop from the perch on his back at once, with his legs stretched upwards, and his eyes distorted, when, without speedy relief, he soon breathes his last. The only remedy for this is to take him in your hands, and, with a pair of scissors, cut off the hinder claws so near to the heel as to draw a drop or two of blood; then wash his feet in white wine, of which if he does not soon revive, make him swallow a drop warm, and he will be quite restored in an hour or two. To conclude, if you would secure a Nightingale in a healthy constitution, do not fail in the month of March to purge him with half a dozen of black spiders, one every day.

On the Proper Food for Nightingales.

All meat agrees with a Nightingale, provided it be mixed with flesh, without which he will not be nourished. He is naturally inclined to feed and live on spiders, wood-lice, ant eggs, flies, and worms, which agree with his constitution; this has put many upon preparing compositions proper to be substituted in the room of his natural food.

The most common is an equal part of hemp-seed, crumb of bread, and minced boiled fresh beef, well mixed together; this agrees very well with them, but it is very troublesome, since it must be prepared fresh every day in the summer; wherefore make the following composition of a paste, which will keep good a long time, be liked, and agree with them.

Recipe for the Paste.

Take two pounds of lean beef-steaks, Spanish or chick pease, husket, millet-seeds, poppy-seeds, sweet almonds, of each half a pound; wheat flour, two ounces; virgin-honey a pound; saffron in powder, a drachm and a half: the yolks of twelve new-laid eggs; fresh butter, the quantity of a hen's egg.

First, let the pease and millet seeds be powdered and sifted. The poppy-seeds must be only well bruised, because their oiliness will not admit of sifting. The beef must be either finely minced, or pounded in a marble mortar, and cleared of all the fat and skin; the almonds must likewise be pounded, after blanching, in hot water; and they must be brought to a perfect paste, otherwise the birds cannot digest them; then break the eggs, and separate the yolks into a broad, clean, earthen dish, and add the honey and saffron.

When these three are well mixed, incorporate therewith successively the beef, almonds, meal, and flour, stirring the whole with a wooden spatula till no clods remain; then turn the mixture into another glazed earthen dish, whose inside has been rubbed over with butter; set it on a gentle fire, stirring it continually, especially the bottom, to keep it from burning; continue it on the fire till the paste will no longer stick to your fingers, and has acquired the stiffness of a new-kneaded biscuit. This done, remove it from the fire, and let it cool in the dish; afterwards put it into a tin box close covered, and keep it in a dry place for use.

The preparation is very difficult at first trial; the proper dryness therefore must be found by experience; when over dry it loses its substance, and sheep's heart must be often mixed with it, else the birds will grow lean; on the other hand, if it be under-dried it will turn mouldy in keeping, if you have not a good number of birds to feed; for this proportion of the ingredients is calculated at the rate of six months provision for one bird. For want of Spanish pease, maize, or Turkish corn will do as well.

If, by mixing an even quantity of sheep-heart with this paste, you regale your Nightingales now and then, upon certain occasions, their song will be stronger and more lasting; and you will be recompensed for it, if you do it, all the singing season, by their melodious harmony.

* A paragraph here tells "How to have singing Nightingales all the year," but it entails processes which would not appeal to bird-keepers of to-day, and it is therefore withheld.

†The endeavour to induce Nightingales to frequent places not chosen by themselves has often been made in England, but always, we believe, without success.

INBREEDING.

A Lecture by Mr. T. Johnson, Southport, before members of the Manchester and Northern Counties O.S.

(Continued from page 223.)

In the following lecture, which we are privileged to reproduce in the interest of our readers, Mr. Johnson, in his own genial style, states that he is not a believer in the practice of inbreeding as applied to Norwich Canaries.

THEY have perpetuated a strain of heavy layers, but there is great mortality in the young, and although a good percentage of the eggs prove fertile, a great percentage fail to hatch. I am not quoting a solitary example. It has been universal, and made the subject for special articles by poultry experts.

I was speaking to a utility poultryman a few months ago, and he touched on that point. He had purchased 150 White Leghorn eggs from a world-famous utility man who has done much to perpetuate the strain. Less than half hatched out, and the others died as if they were affected with the plague, and he only reared 20. This is a fact which I can prove.

This same gentleman gave me a hatch from a pen of Anconas which he was trapnesting. These hens had an average of 200 eggs in 12 months, quite a good average, but he was running with them a cockerel from the same batch, and they had been inbred previously. I had 13 eggs fertile, but none hatched out, although some of them chipped. It was inherent weakness caused through too close inbreeding.

A Field for Experiment.

Being a student of poultry, and especially inbred utility poultry, for the last few years, has put an idea into my head for perpetuating a strain of Canaries which will be free layers and free feeders. It is an idea filched from the poultryman's experiments, and you may consider it at your leisure. I have thought of this for some years now, but have not put it into practice for several reasons.

That something of the sort is required was forcibly manifested to me at a Norwich Plainhead Club meeting last July. There were about 12 fanciers present, no one of the 12 had reared 20 young, and the aggregate total would probably have been considerably less than 100. Now that is serious, and it shows the tendency in Norwich at any rate. I believe Yorkshires are better breeders and feeders, because they are more active and less slothful, and my remarks do not apply so much to them as to Norwich, Crests, and Lancashires.

I think it ought not to be necessary for Norwich fanciers to get up out of their beauty sleep to feed young with a peg, and if Norwich Canaries deteriorate as breeders in inverse ratio to the improvements in show points, I prophesy that in somebody's time they will become as scarce or as extinct as my last week's wages.

The idea is this. If some of you happen to have a hen which breeds and feeds well, a hen which lays five eggs in a clutch and all are fertile (and I would mention here that I don't always blame the cock for infertile eggs), pair her to a cock that comes from a similarly free breeder. By pairing back again to their parents, and by a process of judicious inbreeding, with an outcross every second or third year with a cock from a good breeder, and always keeping an eye open for any signs of weakness, our stocks might become more reliant as breeders. But, of course, fancy points would not have to be forgotten. That is why Norwich are not so reliable as breeders. The fancier selects his best year after year, irrespective of their qualities as breeders.

There the idea is in a nutshell, and I make you a present of it. And now to resume our chat on fancy points.

The exponents of inbreeding have to resort to quoting instances of horses and cows and sheep. Now, I do not know anything about these animals, but I do know that you cannot draw any physical analogy between four-footed animals and birds. Horses and dogs can endure almost any hardship, but birds are frail things, and stamina has to be kept up. They may be as healthy and happy one minute as a widow on her second wedding day, and as dead as a Christmas turkey the next, and while admitting the justice and the correctness of the arguments, I do not think they can be applied to Canaries.

(Continued on next page.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

IN-BREEDING.

(Continued from page 235.)

Other writers have mentioned Rooks and wild birds. Now I do know something of wild birds. There are few men in England with better facilities for the study of wild bird life than I have. I dare say there are something like 60 or 70 species under my observation almost continually, and I know their habits, their nesting sites, and their peculiarities as well as most men.

Swallows nest over my head as I work. I can see through my window Chaffinches, Willow Wrens, Garden Warblers, Flycatchers, and many other species nesting and feeding their young. I work in a 32 acre park which is practically a bird sanctuary, or at least I try to make it one, and the anæmic egg collector and other such spoilsports get short shrift from me.

The Inbreeding of Wild Birds.

I just mention this to show you that I am not talking at random, but you may be wondering what all this has to do with inbreeding. I will tell you. I have worked in that park for 24 years. Robins and Wrens, which are solitary birds (by which I mean they are neither migratory nor gregarious), have been nesting about me for 24 years. Robins are free breeders, and rear from three to five in a nest, Wrens anything from seven to ten. I see them hatch and flush. I protect them as well as I can, but they never increase in number. Why? Inbreeding.

They pair up promiscuously, having no conscience, and the consequence is that the mortality is awful. I see it every day. You can walk through the trees, and you will see them lying dead amongst the fallen leaves. The least bit of hard weather, and you see them—Thrushes, Starlings, Blackbirds, and dozens of other species if you are observant enough to notice them.

Rooks? I live nearly underneath a rookery. The same thing applies. Seagulls? Oh, yes, we have Seagulls, although we have to use glasses to see the sea. They come after the shrimps and cockles; and you may walk along the shore and see them—scores of them lying dead. What kills them? Inbreeding. They are not strong enough, and it is Nature's way of eliminating the unfit.

All this is evidence in support of my contention that inbreeding tends to produce weaklings and inherent disease.

About Pigeons.

Pigeons? Ah! I shall have to be wary here or I shall have Mr. House or Dr. Stewart on my track. I believe Mr. House was a great Fantail fancier. Fantails are freaks, and to propagate freaks you have to inbreed. Pouters are freaks, and so are Carriers and Barbs.

There is a Norwich fancier down Devonshire way who can breed them with the tails at the wrong end in place of eyebrows. He does it by inbreeding. I daresay you could perpetuate wooden legs and glass eyes by inbreeding, but can you produce a better Yorkshire than Dreadnought by the same process?

But about pigeons. What of Show Homers and Magpies and exhibition Homers and Dragons and English Owls? I was recently in a loft containing some of the best exhibition Homers in England, and every other pen contained a show Homer, and the best young were 1st crosses. Is that inbreeding? Mr. House mentioned in one of his articles that Smiths, the noted show Homer fanciers, owed their success to inbreeding. The best show Homer that Smiths ever possessed was bred from two entirely different strains.

What does the English Owl owe to the Antwerp? Mr. House recently wrote an article twitting the Owl fanciers on the matter, yet he sticks to his shibboleth of inbreeding. What of the Magpie pigeon? During recent years, the Magpies have undergone a complete transformation through having an entirely different variety crossed into them. Is that inbreeding?

You may have come to the conclusion that I don't believe in inbreeding. I do. I believe in inbreeding when you want to perpetuate a certain point, as I have shown in egg-production in fowls, and for tendencies of a freakish nature. If a hen sports a tendency to lay an abnormal number of eggs, that tendency can be perpetuated by cautious and discretionary inbreeding; but for fancy stock, which are ever on the improve, and where health is a desideratum, I believe better general results are obtained by pairing unrelated stock, or at least very distant relatives.

That reminds me that one writer said that if you pair 32nd cousins you are inbreeding. His imagination must be made of Para rubber, and such assertions made in seriousness are enough to make a baboon blush. I know that if I were to meet anyone in Market Street who was more distant than a second cousin, I shouldn't recognise him unless he happened to be a Bishop, or he owed me half-a-crown.

There is just one other point I would mention. One writer went into percentages of show birds bred from unrelated stock, and from inbreeding. I forget his figures, but I think he said that he produced twice as many show birds from inbreeding than from unrelated birds. This writer is assuming facts I am unable to accept without better evidence; but just for argument's sake, suppose we admit them. How are we to define a show bird? Are they not all show birds? But they are not all winners, and it is winners we want.

To sum up, as the judges say, although we cannot exactly put on the black cap and sentence inbreeding to death, I believe that it has been credited with a better character than the situation warrants, and I believe that the Canary fancier will do well to tread warily on the path of inbreeding, for there are many pitfalls. I have shown also that pedigree breeding without inbreeding can produce birds which defy competition, a fact which manifests a silence on the part of the inbreeders which is good to listen to, as the Irishman would say.

It seems like whipping a dead horse to keep on reiterating statements, but I have a couple of Press comments here that I have selected from a score of others. One is taken from Mr. House's own paper, and the other is from a utility poultry breeder who does not even believe in it for egg production. I will read them. (The two extracts were not enclosed with the MS. of the lecture.—Ed.)

The discussion which followed was long and interesting. Mr. Raynes, who was in the chair, was the first to give his experiences; and although he took up a non-committal attitude, he mentioned one great winner that he had bred in the long ago from father and daughter.

An Experiment that Failed.

Mr. Hayward contributed a few remarks about the lecturer's theory of bettering the breeding qualities of Norwich. It appears that Mr. Hayward had anticipated the lecturer's theory by a couple of years, and had tried to perpetuate a race of feeders by pairing son to mother. His experiments were disastrous, for the three hens from this pairing which he reared all died from egg-binding, through weakness.

Eventually the genial Sam was induced to get on his hind legs and tell the meeting something. It appears that the champion buff cock was not bred from the Grewar buff. (The lecturer said he was open to correction.) He was bred from the old ticked yellow, one of the best yellows ever staged, and he was bred from unrelated stock. The other clear buff which has stood 2nd to his father so many times this season, was bred from relatives; but the point was pressed by the lecturer in his reply that the son was not so good as his father, which points, he said, to deterioration

Several other gentlemen took part in the debate, which lasted about an hour, and an interesting evening was closed by the usual votes of thanks.

How Things May Go Too Far.

Referring to the crusade against Sparrows, "An Old Ornithologist," in a letter to the "Yorkshire Post," says: "The real danger of a campaign in the nesting season is that no distinction is made by nine persons out of ten between the nesting habits of the House Sparrow and those of any other little brown bird that looks something like it; the Hedge Sparrow, for instance, which feeds exclusively on grubs and insects, thus doing an immense amount of good to the farmer. The nests of Wrens, Chiffchaffs, Hedge Sparrows, Whitethroats, Warblers, and of hosts of other insectivorous birds are ruthlessly ravaged every season in spite of the Wild Birds Protection Act, and in some cases under the pretence that such birds are Sparrows. Yet without the aid of these birds the country would soon become a crawling mass of grubs and caterpillars, without a trace of herbage. If the campaign against the Sparrow is to involve the indiscriminate slaughter of the insect-feeding birds, as it invariably has done on former occasions in this country, the farmers will have but little cause to be thankful."

IN-BREEDING:

WHAT IT IS, AND WHAT IT DOES.

A Treatise of the Greatest Interest to all Breeders of Live Stock.

BY

C. A. HOUSE.

Price tenpence, post free, from The Manager, CAGE BIRDS, 154, Fleet Street, London, E.C. 4.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

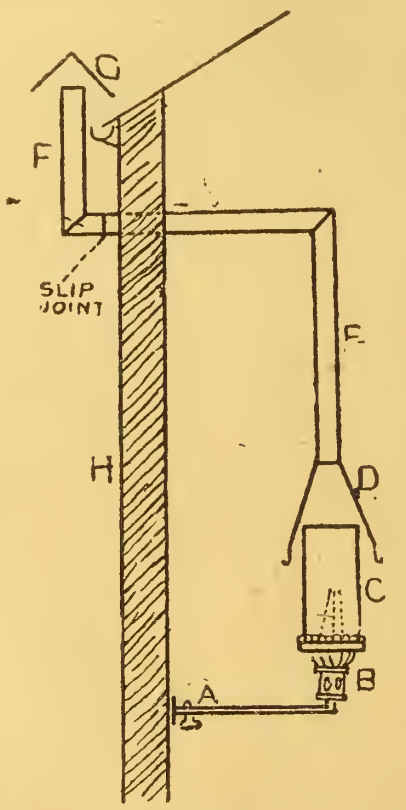
The Prize this week is awarded to Mr. Eli Orrillard, 149, Marston Road, Stafford.

A Simple Heating Apparatus.

Utilising an Ordinary Gas Bracket.

Sir,—I have often seen some good descriptions of small heating apparatus for keeping bird rooms cosy for our pets during these bitterly cold nights, and, although getting a bit late to talk about such things, I thought it would be interesting to many of your readers if I showed them through our paper my method of how I have kept my bird room warm through the winter months.

I have had 42 eggs in the first round, 27 of which have hatched out, ten are just hatching out, and five are clear. All the young are going on fine, and my success I put down to nothing more nor less than the simple contrivance I made and fitted up myself. My room has a plain gas bracket in it, and it is only to such rooms that this will apply. The following description and sketch will show plainly how it works.



A is a plain gas bracket to which is attached B, an ordinary upright incandescent burner, with globe, gallery, and mantle. To fit the gallery I made a strong sheet iron tube C, 10in. long. This tube encloses the light, and also does the heating part of the business; this completed the gas part. To take the fumes out of the room I made D, E, F, which is a round hood and piping, and a cone-shaped top G to keep out wet and prevent down draught, all made out of strong tin. H is the wall through which the pipe passes, and the pipe is fixed to the gutter outside with a piece of wire.

This appliance throws a nice gentle heat into the room, and the only light to be seen from it is a very small ray at bottom of burner, which does not in the least affect the birds from roosting, and has answered well for me during the very severe winter we have had. The reason I have not written before on the subject is that I was waiting results of the first round of eggs. If any reader is in doubt about anything I will answer any question, or will send paper patterns for the complete article for a small cost. I can assure you that it has been a boon to me.

Eli Orrillard.

The Sizes of Store Cages.

Sir,—In reply to J. D. G.'s letter re store cages, in which he refers to a store cage 3ft. long, 8in. wide, 10in. high, I personally think a store cage this size is useless for getting Goldies on seed. My size for four finches is 20in. long, 10 wide, 6 high, with canvas top, perches 1½ ins. from bottom of cage. There would be room for a dozen Linnets, Redpolls, etc., in the cage he mentions. J. D. G. also asks me how many call birds and brace birds I use for catching Goldies. Three good singing cock Goldies, one cock Goldie Mule with finch song, and one hen Goldie brace bird. If J. D. G. has the above birds next catching season, he should meet with excellent results. He must bear in mind that plenty of bait is required for Goldie catching, and should lay thistles or teasels for bait in heaps up both wings of the nets, and be quite sure the nets close properly over the bait. A brace line is not always necessary, for a brace bird pegged down with 2ft. of line, if steady, will perch on top of bait and feed, and this method is preferable to flirt pegs when novice catchers use them, and without hesitation I would advise J. D. G. to use a brace bird pegged down as mentioned. I hope these few tips will be of use.

F. W. Stowe.

The Cardiff Goldfinch-Linnet Hybrids.

The Female Parent Escapes, and Frustrates the Hopes of Her Owner.

Sir,—When some few months since I had the pleasure of putting on record the good fortune of one of our members in breeding some Goldfinch-Linnet Hybrids in his shop, I little thought how keenly alive were the fanciers of South Wales to the doings of other fanciers. The number of fanciers of all grades who have made the pilgrimage from the hills to the little shop in Bute Street, would surprise anyone had a record been kept. In fact on Easter Monday, though closed, the breeder was knocked up by a couple of enthusiasts, who said they had read all about the birds in Cage Birds. If all had continued to prosper as when I last wrote about this local luck, I am sure my old friend Mr. Hurd would have been at everyone's service at any hour of the day or night, even if it wore the Hybrids out in keeping them awake all night as well as day.

The fact is, however, that when the youngsters were about eight weeks old all three sickened, and only one was pulled through with difficulty. Various opinions were given as to the sexes of the three when alive. My own was that one was a cock, and two were hens. This was endorsed by Mr. Hurd, and having the birds under his eye each day his opinion was no doubt correct.

The survivor is a "she" without doubt, and making due allowance for the sexual failing in colour compared to the "he's," we can only regret the more that the cock did not survive, for this hen is of excellent size and colour, and shows the cross particularly well. In fact, she received second prize at our recent Cardiff open show under Mr. H. Norman, and in a very good class, too. I was hoping to have a word with Mr. Norman with the idea of getting the survivor on the page of honour, but I expect I got glued a bit to the Plainhead section.

Anyhow, I regarded it as only a pleasure deferred, for the parents had both enjoyed a good moult, and both they and Mr. Hurd seemed like shaping for some more luck this season, and I thought perhaps it would be as well to bide a wee while.

However, man only proposes, for only a fortnight since my friend got to work with the scissors trimming the stock up a bit, and shortening their toe nails. He successfully operated upon the hen Linnet, but was not careful to properly close the cage door, and whilst he was engaged upon others, the hen escaped from the cage, made a bee line for the door, which was a little open to admit some light, and shook off the kindly attention of her keeper probably for ever. She has left as keen a disappointment as ever befel a proud and humble fancier.

There is always a little one can do, and to that end I have made a sketch of the hen Hybrid, in the hope of your being able to reproduce it in our paper, Cage Birds, and thus to doubly record the fortune and the misfortune. Truly the luck of all Hybrid breeders seems either extra good or extra bad.

E. W. Allsopp.

(Correspondence continued on next page.)

"LIVE BIRD LABELS"

Always use them when sending birds away by rail.

CORRESPONDENCE.

(Continued from page 286.)

A Recipe for Black Paint Wanted.

Sir, — I should like to ask readers of Cage Birds if they could give a mixture to make a black paint for the outside of cages, as I am making my own, and would be very pleased for any information. It might be very acceptable for others as well as myself.

New Beginner.

Ticked, Marked or Variegated.

A Plea for Uniformity.

Sir,—The report of the Southern Norwich Club and your remarks in Twitterings in Cage Birds of March 31, have prompted me to write again to see if a unanimous decision of all specialist clubs embracing all varieties of Canaries and Mules, would not be better than that each should be a law unto itself. I have no desire as a Yorkshire fancier to impose my views upon fanciers of another variety, but if the suggestions of the Southern Norwich P.C. are carried out we shall have in two varieties terms having totally different meanings.

The Yorkshire Union definitions are accepted by the Yorkshire Specialist Clubs in the North, South, and, I think, Midlands, and Scotland. In Yorkshire there are the Green and Cinnamon Marked Clubs catering for their respective varieties. In the Border Fancy the term marked is distinctly understood to have the same meaning as amongst the Yorkshire variety, and a year or two ago I know that it was a condition of receiving the Border Club's patronage that a class be provided for even marks, possibly the same is required at the present time.

I would plead very strongly with the Norwich clubs throughout the country not to do away with the meaning attached to the word "marked." They may limit the size of the tick, if they so wish, also the number of ticks a bird may possess before it becomes a variegated, but for the sake of uniformity when "marked" is used let it apply to marks upon the eyes, wings, and outer tail feathers. It is a term which was better understood when breeders aimed at producing "marks," and when classes for marked birds were given at every show, and exhibitors strove for perfection in those points more than for type, which is the present day desideratum.

Thos. C. Crawhall.

About the Goldfinch.

And How to Treat it for Mule Breeding

Sir,—My present endeavour is to give as full a description as space will allow of the best manner in which the Goldfinch appears to thrive, and also a few hints on the selection of this bird for various purposes. Before going further I would like the reader to understand that in Britain we have only one species of Goldfinch, although differences of plumage and size often mislead novices. For a start we will take the difference in size which in this species, as in many others, is of common occurrence. Some people wonder why they get birds from one district so large compared with those coming from another. The chief reason of this is, I think, the food which they get. On heavy lands the Finches are always much larger than those coming from light lands, because on the heavy soils the thistles, etc., on which these birds feed, seem to contain much more oil than those grown on light soil. Those which grow on light soil, if the weather is not particularly wet, are generally of a very dry nature, and the birds do not seem to grow so big on them. Some may consider this statement more or less a fad, and perhaps it may be, but anyhow, an old friend of mine who has had hundreds of Finches through his hands, sticks to it hard and fast.

Finches for breeding Mules must, when the season comes round, be fed on a little different system from the ordinary one. About April give a daily supply of dandelion heads and leaves, picking them as soon as the yellow petals have withered in the stalk; they will then be full of seed. When the tip of the bill has lost its black point, which will be about the end of May, pair up with whatever you may require them to be with. Some birds are even later than this before they are ready to breed, and some never breed at all. Never trust a Finch with eggs or young unless he has been proved, because many of them will destroy the eggs and young. Keeping them with Canaries gets them used to the hens, but the difference of food makes it not advisable. If a Finch is ready to breed he will, as a rule, fertilise the eggs of any Canary. Do not be alarmed if the feathers on the lower part of the body hang all over the legs like a cochin fowl, because many Finches turn like that at this season of the year.

F. H. Cook.

A Proposed Society for Bothwell.

Will Someone Make a Start?

Sir,—It was reported some time ago that a meeting was to be held for the purpose of forming a club of all the fanciers in the parish of Bothwell. As nothing seems to have been done in the matter I would suggest that a meeting should be called at once at some convenient centre, and get the opinions of the fanciers. This is quite a large district, comprising the districts of Uddingston, Bothwell, Bothwellhaugh, Bellshill, Mossend, Clydesdale, New Stevenson, and Holytown, and I am sure we could have a very strong club, and there are plenty of good halls where a show could be held. These districts are all connected with an electric tram service, which should make it quite easy to reach the meeting place. I hope to see this matter taken up, and put into practical shape.

Interested.

English Song Canaries.

A Lady Breeder Makes a Start Breeding Them.

Sir,—Seeing the letter of Mr. Guiterrez in Cage Birds of April 14, describing the enemy breeding of Canaries, and teaching the young of other classes than Rollers to sing, I am trying to do the same by mating a show winner Clear Cap Gold Lizard hen and a pure Randal Schoolmaster, and using the father to train the young. I think that one ought to get a better songster from the father being pure, as the song must somewhat be governed by the parents.

The question is how will the Roller affect the Lizard hen strain? Time will tell. I shall be pleased to hear what my fellow readers think. I am only a novice, never having bred before any young, but still I feel the enemy shall not have it all their own way. My birds are all pure show birds, and they shall see what war work they can do.

If this is a failure I can place other young of Cinnamons to be trained by a Schoolmaster as mentioned in the letter in Cage Birds for April 14. Colour feeding will have to be used with the Roller Lizard young. At present they are building, and very happy, while the Roller cock sings delightfully to her. Only those who know the song can understand this. No other Canary's song comes near it to my mind.

I may add my birds are only a hobby, as I suffer from heart trouble, and they have been my greatest delight throughout a very bad time. Also I should like to say how I have been aided by Cage Birds and reading such helpful notes as appear in its columns. My best wishes to this most helpful of all papers.

Margaret A. Burgess.

Birds at the Front.

An Identification Question.

Sir,—Being interested in bird life, though only a novice, I thought perhaps a line from France may be of interest. Cage Birds is sent out to me each week, and I find myself looking forward to each copy, the correspondence being especially interesting and educative.

We have been experiencing some very bad weather out here, March being very severe, yet during this month, the 28th, I was watching a pair of Yellow Wagtails busy making their nest by the side of a small river, not more than twenty yards away from our horse lines. Within six yards of the nest is a horse trough, where men and horses are constantly passing. On April 13 three eggs lay snugly in the nest.

I have seen a fair variety of birds out here, actually in the vicinity of the guns. The first Swallows I saw were here on April 13. Yellowhammers are very plentiful, also Chaffinches, Greenfinches, Blackcaps, and Blue Tits. I have also seen on many occasions the Woodpecker, Jays, and the Golden Crested Wren. The Sparrow Hawk and Magpie are also common birds here, and I have seen one or two Goldies and Bullies, and also a bird I cannot make out. I have seen as many as twenty in a flock.

I was busy grooming, when suddenly I heard some peculiar chirping, as though some birds had been scared, and on looking around I saw these birds, the trouble being a Sparrow-Hawk chasing them. In colour they were almost like a Sparrow, with a head and beak like a Bullfinch; position and shape almost like a small Yorkshire Canary. This, I am aware, is rather a vague description, but I cannot put it any clearer.

I see a good many well-known fanciers have had to pack up through different reasons, but perhaps ere long all will be able to take up their beloved hobby once more. I wish all fanciers success in the coming breeding season, and all good wishes to your valuable paper.

A THREE-COMPARTMENT BREEDING CAGE.
The best kind of breeding cage for the purpose of running a Finch with two hen Canaries. It is fitted with sliding partitions.

The Trouble of the Sweating Hen.

How to Avoid It.

Sir,—As the breeding season is now at hand, I should like to give a few hints to beginners in Canary breeding. I have only been breeding Canaries for the last two seasons, and I find that sweating hens are perhaps more disappointing to the beginner than any other type of hen. Such a hen fills him with high hopes at the beginning, only to dash them to the ground a few days later. She will feed the young for three or four days, and then she will leave them altogether.

In most cases this trouble arises from surfeiting the birds with too much egg food, green food, and other kind of dainties. When the young are hatched the beginner will at once start to fill the cages with all kind of green food, egg food, etc., and this is one of the biggest mistakes a beginner can make. As soon as the young are hatched half a teaspoonful of pure yolk of egg three times a day for the first two days will be quite enough for a brood of four or five youngsters, gradually bringing them on to the ordinary egg food by the fourth day. The bath should be given on the fourth day, with a teaspoonful of salt in it, and continued daily.

The only chance to save the youngsters of a sweating hen would be to transfer them to another hen which has a brood of youngsters at about the same age, always remembering to make the change in the evening. Then turn the sweating hen into a large flight for two or three weeks for her to have a little exercise before mating her up again, and also to let her have a bath daily. Always remember not to feed the birds on too much egg food, for over much egg food is responsible for many deaths of Canaries. We should all remember that they are seed eaters, and that therefore a seed diet is most suitable for them except when rearing young ones.

L. Williams.

Why Members Shows' Fail.

Fees too Small Point. Counting Wrong. Too Many Cards.

Sir,—I noticed some few weeks ago that one of your correspondents raised the question as to why members' shows so often fail to show a profit. I think the chief reason is that clubs are too generous to their members at these shows. Generally speaking, the entry fee is sixpence per bird, all of which is returned in prize money, and sixpence per exhibitor which is retained by the club. In these times it seems that twenty exhibitors make a good muster for a members' show, so that 10s., plus an insignificant gate, is all the margin that the club has, out of which it has to pay judges' fees and various incidental expenses.

Nor is this all, for most clubs give valuable cups and medals for most points made in the various sections throughout the year. Quite seven-eighths of the points which count for competition for these prizes are won at the two members' shows, and therefore it is obvious that seven-eighths of the value of these prizes should be debited to the two shows. This would naturally make the figures all the worse, and the obvious remedy is to charge higher entrance fees. This would also be fair from another point of view, for an exhibitor who shows only one bird pays at present one shilling, whereas six birds may be shown for sevenpence each; this encourages the exhibition of numbers rather than quality of birds.

The method of compiling points also leaves much to be desired; it is certainly unfair that a first prize should only count one point more than a second prize. Suppose a society gives six classes for British birds. A exhibits six birds, and scores five firsts and one vhc, a total of 39 points. B exhibits seven birds, and scores five seconds and two thirds, a total of 40 points. B's total is better than A's, despite the fact that he is beaten by A in five out of six classes, and he secures an extra point by virtue of a bird which is at best a third rate specimen, and which possibly would not even have secured third prize in decent competition. I should like to see every bird credited with three points for every bird that it beats. For instance, in a class of four, first nine points, second six points, third three points, and the fourth, which has beaten nothing, has earned nothing.

Moreover, I think that vhc, hc, and c cards should be awarded quite at the discretion of the judge, and that he should not be obliged, merely because the classes are rather short of entries, to award any of these cards to birds which have no points whatever to commend them. We should then know that when a bird was vhc it was a commendable specimen, beaten by better birds, not a mere "last-ditcher," which was awarded a card because it was the only bird not good enough to get a money prize.

A. R. Cor.

(The several points raised in this letter should cause some healthy discussion which would be all to the good. The last point especially deserves consideration, for it is not to be disputed that in limited competition some birds get the cards simply because they are there for distribution and not for any merit. In one case we know of a judge who would have passed a bird as being a foreigner but had to give it vhc in a class of four, as the committee instructed him to give all the cards because of a points competition.—Ed. Cage Birds.]

Is Tredegar C.B.S. Dead?

Sir,—Would the Sec. of Tredegar C.B.S. kindly say what is the reason that there are no meetings held, while there are nine members left at home to still follow up the fancy? They have a few trophies in hand for competition, and, seeing that a few of the committee have been showing regularly, I would like to know the reason why they have had no meetings to help the novices, as the majority are novices.

One Interested.

Young Yorkshires Dying.

Sawdust or War Bread.

Sir,—On April 11, I had a nest of valuable Yorkshires from a hen, sister to a buff cock that was claimed at Sheffield for £10. The hen appeared to be rearing them all right up to last evening, April 20th, and she was up early calling the youngsters for feeding on the 21st, but as I thought she was unusually restless, I peeped into the nest, and saw that three were dead, and one almost dead. I fail to find a cause, but would mention that the birds looked unusually plump, and their abdomens were very purple. The hen had a peculiar habit of eating sawdust after filling her crop just before feeding the young. Can this be the cause, or is it war bread? As I valued the young very highly, I wish to avoid any repetition. Can any readers record similar experience and suggest a remedy?

Death of a Noted Chough.

Turned Albino in His Last Moult.

Sir,—Many of your readers will regret to learn of the death of the famous Chough so successfully shown by Mr. P. Victor Williams, Hinstock Hall. This bird was a great winner at Provincial shows, also the Palace, both for his late owner and his former owner, Mr. C. T. Maxwell. If my memory serves me well, while in the possession of the latter gentleman, he escaped from his aviary, and had an escapade about London, but was eventually recaptured.

His last moult was rather an abnormal one; in place of glossy black, the plumage was nearly white, so much so that had there been the usual show at the Palace, it was Mr. Williams' intention to exhibit him in the Albino class. It is nothing unusual for a Chough to moult a few grey feathers in the flights one year, and the next year to be quite normal again. I have frequently seen that, but have never known one to moult a nearly white body before.

Arthur C. Brotherhood.

Oxalic Acid and Red Mite.

Does Killing the Acid Destroy Its Efficiency?

Sir,—As Mr. St. John has been good enough to refer to my former letter on this subject with kindly appreciation, and in doing so raises a point which he says he has raised before, but without gleaning the information he hoped to receive as to the effect of the neutralised acid upon the mites, may I be allowed to add a further contribution on the matter. In doing so I will endeavour to be as brief as possible.

Your correspondent rightly notes that I touched upon it in my last, but that I did not pronounce definitely upon it. My reticence was explained in my letter itself, where, after expressing my opinion that the mixture of oxalic acid and limewash might be used with safety as the acid, being "killed" by the lime, would probably injure neither the bird nor the insect, I expressly said that I would not dogmatise on the point, because it is quite possible that the insoluble oxalate of calcium formed when the acid and the lime are mixed may be, in some way, destructive to the mite though harmless to man.

It will be seen that my answer to Mr. St. John's question, "Does it not seem reasonable to suppose that when the acid is neutralised and rendered harmless to human or animal life, it most probably loses its effect upon insect life?" is given in the portion of my letter epitomised above, and that he and I agree. To repeat that answer in another form it is, Yes, probably, but not certainly.

In the absence of any positive information in my hands, and in face of the fact that at least two other of your correspondents had testified to the efficacy of the mixture in clearing their cages of the pest, I could and can give no other reply; he would either be a very rash or a very unscientific man who did so under the circumstances. The point is one that can only be settled by actual experiment, and as I am quite unacquainted with the red mite and so far as I know never saw one. (I hope no one will send me a supply by way of increasing my knowledge) I cannot conduct the necessary tests. The two correspondents above referred to had made an experiment and to that extent are far better qualified to speak than am I, but, as I pointed out in my last, their experiments were not conclusive, for there was nothing to show that the mites would not have disappeared without the application of the mixture.

Mr. St. John suggests another reason why the experiments were not conclusive, viz., that the experimenters unconsciously took a little more care in applying the mixture than they had done in applying the plain limewash on previous occasions, and that this little extra care, and not the use of the mixture, led to the disappearance or destruction of the mites. This is quite feasible—without any reflection upon the experimenters.

May I indicate other possibilities, based upon two considerations, viz., (a) that some forms of life possess senses and sensibilities quite unknown to others; and (b) that certain substances which are quite harmless to some forms of life are very deadly to other forms.

Under (a) it is quite conceivable that calcium oxalate is so repulsive to some sense possessed by the red mite as to cause it to rapidly quit its vicinity. I do not say this is very likely. Again, under (b) it is quite possible that though calcium oxalate is not perceptibly harmful to man or bird, it is very destructive to red mite, and possibly to some other insects as well. This possibility may be (I do not say it is) an actuality, and may become so in either of at least two ways. Though I have followed the usual description of calcium oxalate as an insoluble (and therefore non-poisonous) salt, this description is scarcely accurate, for it is soluble in certain acids. It is well known that certain insects produce acids; for instance, the red mite produces formic acid. Now suppose the red mite produces some peculiar acid in which calcium oxalate is soluble, and further suppose that on the oxalic acid and lime mixture coming into contact with the mite some of the mite produced acid comes into contact with and dissolves some of the calcium oxalate contained in the mixture, what happens? Obviously nothing if the dissolved oxalate be harmless to the mite, but if it be harmful, then it is bad for the mite, and so good for the cleanliness of the cage and for the comfort of the bird.

There is still another way in which the mixture may be effectual, and I think this is the most likely one—i.e., the mechanical way. The addition of the oxalic acid to the lime and the consequent presence of calcic oxalate in the mixture may cause the mixture to become more fluid or penetrating, so that it will flow more readily into the interstices of the cage, and thus may surround and imprison the pest so that it dies of want of air and food. It may also cause the mixture to "set" a little harder and more compactly, thus making the holding of the mites stronger and more effectual.

All this shows how impossible it is to settle Mr. St. John's question definitely without experimental investigation. I do not know whether it is worth while to conduct such an investigation, but if anyone is suffiolently interested it would not be either very difficult or very costly to make it—provided he had a supply of the mites available.

I am still of opinion that if oxalic acid must be used it would be better to use it separately—i.e., to make a solution of it and brush this solution well over the cage, paying particular attention to corners, cracks, and crevices. There is little doubt this would kill the mite. Then, after it has had time to do its work, apply the limewash with the same care. This will destroy the oxalic acid as such, preventing it from injuring the bird, whilst, at the same time, wherever the acid has been brushed the calcium oxalate would be formed, and if this has any injurious effect on the mite it will, of course, exercise it.

I notice that in your issue of March 24 Mr. Clayton writes that he quite admired "Old Helpmates'" cautious note (which my first letter was written to support and reinforce), and agrees "that great care should be exercised to properly dissolve the crystals." I should like to warn Mr. Clayton further. It does not matter how carefully he dissolves his crystals, or how weak he makes his solution, the crystals will re-form as that solution dries. Let him take a clean piece of glass and put a drop of his carefully dissolved crystals on it as it lies flat on some support; if he will allow it to remain there until it has dried he will see the crystals adhering to the glass where the drop was. He may not be able with the naked eye to distinguish the crystals, or anything else but a dim-looking spot. But the microscope will reveal them, and if he has not lost a bird from the use of oxalic acid solution about his cages, he has at all events run a serious risk.

My letter has already run to an unconscionable length, or I should have liked to have added a few words on camphor solvents; I see Mr. St. John prefers camphor to anything else for getting quit of red mite. I am afraid I am a stranger to that brevity which is said to be the soul of wit, but at any rate I am always glad if I can be of service to others either by suggestion or instruction or in any other way, and that must be my excuse for my long-windedness on the above. It is caused by trying to be clear.

J. T. Whitaker.

[Perhaps our correspondent will kindly let us have on another occasion his observations on camphor solvents. The matter is of great importance and interest, and we are sure that all bird keepers will be pleased to learn anything that will lead to a perfectly satisfactory method of dealing with such a pestiferous insect as the red-mite. Personally, we have found a solution of camphor in methylated spirits to be instantaneously fatal to parasitic insects. Like Mr. Whitaker, we have had little experience with red mite, but recently we had occasion to deal with a fox-terrier dog which was very bedly infested with ticks, wicked biting insects which bury their heads in the skin of the victim and are most difficult of dislodgment. An application of the solution to the skin of the dog by means of a small piece of rag brought away the parasites instantaneously by the hundred, and two or three successive applications at intervals of three days completely cured the worst case we have ever seen; hence the subhead "The Best of all Insecticides" which we inserted in the letter of Mr. Claudo St, John.—Editor, Cage Birds.]

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*
(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*
(3)—*Queries intended for different specialists must be written on separate sheets of paper.*
(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*
(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*
(6)—*Queries received during any week, up to the* **first post on Saturday morning,** *will be answered in the issue bearing date of Saturday in the following week.*
(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*
(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*
(9)—*All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

TO USE PREPARED YOLK.

W. Jones.—One of the best and simplest ways of using prepared egg yolk as a substitute for the ordinary fresh boiled eggs is to get any required quantity of maizena water biscuits or any similar brand of good plain biscuits, and crush or grind them in a seed mill, and then add to each pound of the crushed biscuit half a pound of the prepared yolk and thoroughly mix all together and store ready for use in air-tight tins for jars. If kept in a cool dry place this will keep in excellent condition for many months. To use take the quantity required for immediate use, place it in a small cup, sprinkle with a few drops of water—only a very few drops may be necessary—and stir into a crumbly-moist mass with a fork. A slight sprinkling of sugar or maw may be added at the time of mixing, it found desirable, for dainty feeders. Apart from this method you will be quite correct if you simply add double the bulk, or a little more, of crushed biscuit or freshly crumbled stale bread to the yolk at any time, say, to a teaspoonful of yolk add two heaped teaspoonfuls of bread crumbs or crushed biscuit of any kind that you have most handy, but preferably plain unspiced sorts, and mix together, adding a drop or two of water if needed to bring it to a crumbly consistency, but avoid as much as possible adding moisture.

KEEPING QUALITIES OF MEDICINES, ETC.

Spennymoor.—(1) There is no book made up of the queries which have appeared in our columns. You might, however, very easily arrange a book of this kind for yourself, as some fanciers certainly do, by cutting out the replies that most appeal to you, and pasting them in a small scrap book or a memo. book, with American cloth covers, with about a third of the pages carefully cut out, leaving a quarter inch margin in at the back to compensate for the extra thickness which the cuttings will make at the front when pasted in, and thereby prevent the book bulging when full. (2) If kept in well-stoppered bottles, having narrow mouths for fluids and wide mouths for powders or crystals, most of the drugs will keep in quite good condition indefinitely, or, say, for two or three years, which is certainly quite long enough for any purpose. Everything of this kind should be kept in a cool, dry place, preferably in a cupboard or chest, but in any case not exposed to strong sunlight or extremes of temperature, and closely stoppered with good sound corks, or glass stoppers—the latter are best. To take your items in the order you put them: Lemon juice, there is no necessity to stock this in bulk. Squeeze it fresh from the fruit as required. Tincts. of steel and gentian, indefinitely, under conditions named above, of course. Syrup of buckthorn, indefinitely, but the bottle containing this should never be filled more than two-thirds. Syrup of hypophosphites, which, by the way, is not the well-known chemical food; dil. sulph. acid, indefinitely; bismuth, chlorate of potash and sulphate of soda, indefinitely, the two first are powders and the last in crystals, and would need wide mouthed bottles; tinct. of capsicum, indefinitely; dandelion juice would be best obtained in the extract, a stiff paste similar to liquorice in appearance, and kept in a small earthenware jar, and a little thinned down with water as required—the extract would keep indefinitely; tinct. of rhubarb, indefinitely.

MOULTING AND PANTING.

H. Tatlow.—You ought to have mentioned the conditions under which the bird is kept, and in what position. The continual moulting points to its being kept in an unsuitable position, perhaps, exposed to direct cold draughts or extremes of heat and cold, which might also largely account for the advanced stage of bronchial trouble, from which it seems to be suffering. Considering its condition generally, I think you would be best advised to discard the idea of breeding with him this year in any case, as it is most unlikely that it will be a suitable subject for the breeding cage for some time to come, and then the season would probably be too far advanced. Try what a month or so of the following treatment will do for it. In the first place see that it is kept in a fairly comfortable and equable place, where it will be free from cold draughts, rapid extremes of temperature, and do not allow it to hang near or over burning lights in the evenings, nor high up near the ceiling. As staple diet give a mixture of three parts canary to one part summer rape. In addition give separately every second day, a morsel of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with maw seed. On the alternate days give half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, and a morsel of some green salad or a morsel of banana. In the drinking water add ten drops of lemon juice and as much Epsom salts as will cover a sixpence, for three consecutive days. After this give instead four drops each of oxymel of squills, ipecacuanha wine, tincture of lobelia, and sweet spirit of nitre, every second day for a fortnight, and on the alternate days give twenty drops of chemical food. Continue the last named item every second day during the remainder of the month's course.

NOT GRASPING PERCH.

Anxious.—The bird is probably troubled with a callosity in the centre of the foot, which is not a very uncommon occurrence, and is somewhat similar to the well-known "bumble foot" in poultry. In many instances, at least, it is doubtless induced in the first instance by too hard and unsuitable perches, and once established it is exceedingly difficult, if not impossible, to cure. See that it is supplied with well-fitting perches of a proper size and shape, made of nice soft pine wood. An approximately round spar, half-an-inch in diameter, with the side that is to form the upper surface of the perch trimmed off to a flattened oval shape, will make a very suitable perch for general purposes. You may bathe the foot for a few minutes in fairly warm water, wipe dry, and paint it well with a drop or two of Friar's balsam, and after this gently rub on a little Jeyes' veterinary ointment every second day for a week. If the bird is vigorous and energetic, and the one foot is quite sound, there is no reason why the clutches of eggs by him should not be fertile. I trust you may have a good measure of success in the coming season; it is much too early to regard it as a failure yet. Do not hesitate to write if you get in any difficulty. Shall be pleased to be of assistance at any time.

WHEN YOUNG ARE HATCHED.

F. J. Honeysett.—No, it is neither necessary nor advisable to take away the seed altogether when young are hatched. The egg food and all other items which are given to assist the parents in rearing the young are entirely supplementary to the usual staple seed diet, and in no sense intended to supplant it. Let the staple diet remain all through the season, and for the rest follow the lines laid down in "Canary Breeding for Beginners," which will have been sent you by now.

HEN NOT LAYING.

A Novice.—You do not say how long the hen has been mated, but only that she paired and has sat a fortnight. If you mean that she has only been mated a fortnight or a little over, it is quite probable that all she requires is a little more patience. Leave the birds together, and in addition to the staple seed diet give the pair a small teaspoonful of egg food with about half the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it, every second day, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a slight sprinkling of linseed and yellow mustard in the bulk. Give three or four crisp young leaves of dandelion daily. Continue this treatment for three or four weeks if necessary, and you will probably soon find things looking more hopeful.

EGGS WITHOUT SHELLS.

Shell-less Eggs.—The lower portion of the oviduct is evidently out of working order. I presume you give some kind of shell-forming material, such as cuttlefish bone, when the hen is nesting? If not you should do so. Add ten drops of lemon juice and as much Epsom salts as will cover a sixpence to the drinking water for three consecutive days, and when she is about nesting again keep a piece of cuttlefish in the wires of the cage, get a little old mortar, sprinkle slightly with common salt, and smash it up to a coarse sand, and mix a proportion of this with the sand you use on the floor of the cage, or put a little heap on top of the sand every day or two, and in the week before you expect her to begin laying add a teaspoonful of lime-water to her drinking water every second day.

SAMPLE OF EGG BREAD, ETC.

New Reader.—(1) In theory the recipe from which the egg-bread of which you send a sample is prepared, is a very sound and good one, and I see no reason whatever to quarrel with it, nor to doubt its success in rearing young Canaries, but personally I have never used the food, and in practice I do not care about foods that are ground up to a fine meal, as is this one. I always find that the birds themselves prefer something of a rather more granular nature to pick up. Possibly you would get the desired condition by setting the mill to grind a little more coarsely, say, set it so that it would barely touch summer rape in the passage through, then the food should come through in a nice granular condition. (2) A small teaspoonful of egg-food once or twice a week, not oftener, may be given to singing cocks which are not being bred with. If they seem in very high condition give it only once a week; if in only moderate condition twice a week will do no harm. (3) Glad to know the moulting bird has benefited so much by the treatment. It would be as well to continue the treatment for another fortnight, after a few days' rest, when the bird should be more likely to be in a proper condition for mating. Do not mate for at least two or three weeks after the feathers ceased dropping altogether. (4) As the weather is still so unstable it would be as well not to be in too great a hurry to remove the cover from round the cage. If your expected removal

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); Rouse's "Canary Manual" (1/2); Battye's "Yorkshire Canaries" (1/1½); Rouse's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Ramsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

QUERIES—Continued from p. 238.

to the South coast takes place soon, it would be judicious to leave the cover on until the end of the journey when it may be removed in the new position.

A STOLID MATE.

Ex-Cpl.—Am very pleased to hear the cock recovered so well on the treatment advised. It is just possible that you put him with the hen a little too soon. There should have been an interval of at least two to three weeks after the feathers had quite ceased dropping before you mated him. But still, from what you say, I am rather inclined to think that had you left the pair together and exercised a little more patience, all would have come right in a short time. It is not a very unusual occurrence for a cock to appear to get mopy or sulky after being placed with a hen, but when they are attentive to their duties, as yours seems to have been, their quiet manner does not necessarily indicate they have gone off breeding condition, and it is not the least uncommon for good broods to be obtained from such birds. If the hen is still anxious to nest, and the cock has resumed his former condition, or is very attentive to the hen through the wired portion of the slides, I think you may safely risk running them together again, and leave matters to follow their own course next time. Do not get impatient if the hen does not go to nest immediately; hens vary a good deal in this matter, and whilst one may go to nest within a week or so after the cock is run with her, another will continue to gad about for a month before settling down. Certainly, by the calendar the season should now be well under way, but when you take into consideration the exceptional conditions that we have passed through, it is not so very late after all.

EGG FOOD SUBSTITUTE.

Jack Sprat.—I can only say that the food you name is very good in a general way as a soft food for Canaries all the year round, and that it has been used as a substitute for egg food for rearing the young from the shell by many fanciers, but, personally, I have never used it as a complete substitute from the shell. Still, where so many others have succeeded there is no reason why you should fail, and if you scald it as required for use, with a little boiling water, let it stand until cool, then stir with a fork into a crumbly mass, you should have every chance of success with it.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

OVERGROWN BEAK.

J. H. Miller.—The top mandible of a bird overgrowing the bottom one is quite an occasional occurrence with birds kept in captivity, but fortunately it is quite a simple operation to remove it. Catch the bird and hold it in the left hand, getting the head between the finger and thumb, then with a sharp knife or pair of scissors remove the overlapping portion. Be careful not to squeeze the bird, yet hold it firmly.

THRUSH NOT TAMING.

Sutherland.—I quite agree with you that it would be as well to give your bird its liberty. Wait until next month, when insect life is more plentiful, and then take it into the wood as you suggest. Open the cage door, and let it come out quietly by itself. You had better do this in the early morning, so that the bird has all the day to get used to its strange surroundings. Had the bird been a valuable show specimen it might have been possible to have made up a different food mixture that would have suited it, but considering that these birds are not difficult to procure I hardly think it worth while to attempt it with your bird.

COCK OR HEN GOLDFINCH.

Chilton.—By your description I am inclined to think your second Goldie is a hen; if so, you could certainly try to breed from the pair: it will be a most interesting proceeding, and the young birds would be valuable for hybrid breeding another year. (2) By careful management you could also pair the cock with a hen Canary. Goldfinches as a rule are late breeders, and when you find your Canary showing an inclination to go to nest, run him in with her for two or three days, or until she finishes building, then you could put him with the Goldie hen and leave him there. A second could be managed in a similar manner, but he need not be left with the Canary quite so long. If she is quite ready a couple of pairings on successive evenings would be sufficient. The young ones could be reared on the usual egg-food, with a daily supply of soaked seeds and mild food, such as flowering grass, chickweed, or other green food. Crushed hemp should also be given. Sprays of plants infested with green fly are a valuable addition to the bill of fare.

BREEDING WITH BULLFINCHES.

E. S. H.—Pairs of Bullfinches are very unreliable as breeders, and I think, as you have a Greenfinch in with them, I would remove the cock Bullie out of sight and hearing, and the two left may possibly mate. If so, you would have some very valuable Hybrids. The larger of your two cages would be the better one for them. Make their surroundings as natural as possible, putting some rough twigs round the nesting boxes. I daresay in your district you could collect some heather; if so, that would do admirably.

SAMPLE OF WILD SEEDS.

Constant Reader.—I am sorry, but I cannot quite agree with you respecting the sample of wild seed sent me; the only real fault I can find with it is that it contains a rather large quantity of husks. If you take a pinch of it and place it on a sheet of paper and blow off the husks, the remainder is a collection of about a dozen different kinds of seed all useful for Finches. The gathering of wild seeds in bulk is a most difficult matter; it is generally obtained by collecting the siftings from corn, consequently a certain quantity of husks and waste matter is unavoidable; one cannot expect these seeds to be as clean and free from refuse as hemp and canary, which are grown as a separate crop, cut, cleaned, and harvested in the same manner as wheat and barley. I see no objection to your using this collection, as it is, or winnowing it first to get rid of the husks. Many of the seeds it contains are a valuable addition to the bill of fare of the Finches, particularly Linnets.

BRITISH BIRD & HYBRID QUERISTS should consult Houlton's great work, "Cage-Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hardbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them," No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

CONCERNING A GREENFINCH MULE.

E. Knap.—It may take you some time to cure your bird of the habit of feather eating. I suggest that you place him near another bird, and when the fine weather actually arrives, hang him outside for an hour or so; he may then forget the habit. Spray him with a strong solution of quassia chips, it will not injure him, and will make his feathers distasteful.

COCK BIRD FIGHTING THE HEN.

J. M. D.—You had better part the birds for a time, but hang them so that they can see each other, putting the cages as close together as possible, then in about a week's time put them back for an hour or so, and repeat this until they settle down, and appear to agree together. You should feed both of them well, giving a little hemp and some sunflower to the Greenie. Offer daily to both of them, dandelion leaves, chickweed, or a little groundsel.

ABOUT WILD FOOD FOR BIRDS.

M. E. B.—The plants mentioned are given in a fresh condition, they should be collected and offered to the birds at once. Dandelion leaves, chickweed, groundsel, etc., should all be taken from plants growing out in the open, and from soil that is not too rich. From now onwards such food of this kind can be given to the aviary birds daily, of course, removing all wilted or decaying leaves.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

WHAT BIRDS?

Cymro.—They are either Spice or Striated Finches, the former, I think; in normal times their value is about 3/6 a pair, at the present time they would command double that amount, or a little more.

CAGE FOR AUSTRALIAN LOVEBIRD.

F. Sykes.—An all-wire cage, about 18 inches square and about the same height or a little higher, would answer the purpose as well as any, but you must stand it clear of draught. Canary, white millet, millet spray, and a few oats, will form the main dietary, with a slice of sweet apple during the winter, and when procurable free from frost, unlimited flowering and seeding grass; of course, grit, cuttlebone, and water, must be continuously supplied. Our Nutshell, "Budgerigars," 2½d., post free, from our Manager, would be a useful little handbook to keep for reference.

FOREIGN BIRD QUERISTS should consult Page's "Foreign Birds for Beginners" (1/1½); Arthur's "Budgerigars and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 14 "Gouldian Finches," No. 16 "Avadavats," No. 17 "The Grey Parrot," No. 18 "Budgerigars," No. 19 "The Pekin Robin," No. 20 "Waxbills." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

BREEDING SENEGAL PARROTS.

A. Brandt.—Your chances of success would be most probable either in a small room, or outdoor aviary; either must be fitted up with tree branches, varying from half-inch to two inches in diameter. Of course, all interior woodwork must be protected with wire netting. Success should also be very probable in a strong cage about 30 inches square at base and about three to four feet high. For a cage hang up a barrel at least twelve inches in diameter and fifteen to eighteen inches deep. In a room or aviary it would be advisable to put up two such barrels, throwing a handful of sawdust into each. It would be best to make a start at once, as soon as you can get cage, room, or aviary ready for their occupation. It is very probable, however, that they may take nine to twelve months to settle down before starting to think of nesting operations.

AMAZON PARROT LAYING EGGS.

T. Barnes.—I do not think you need trouble about the feather pulling, which is most probably a merely temporary sequence to the laying of the eggs. See that it is eating heartily. You could also give a little cod liver oil emulsion daily, thinly spread on either bread, biscuit, or cake, whichever it takes most readily; this would assist it to recuperate from any exhaustion there may be. It would also be well if you were to put on teaspoonful of fluid magnesia into the drinking water, every fourth day for a month, and on the other days well colour the water with chemical food for the same period. It is a pity you cannot get a cock bird and attempt to breed them. They would, however, require a strong cage about 3ft. square by about 4ft. high, fitted up with branches, and a small barrel for nesting quarters.

AILING GREY PARROT.

Grimwood.—The bird is undoubtedly suffering from the shock of the explosion, but it should gradually recover therefrom. Add to your dietary such ripe fruit as it will eat, also shelled nuts, biscuits, little raw carrot, and shelled nuts. Be very careful that young people do not tease it, and avoid anything in its vicinity likely to scare it; the effects of the shock may gradually pass off. You can only aid nature to effect its own cure by watching its health and shielding it from anything likely to alarm. The effects of that awful explosion will not readily pass from any who experienced anything of its real force. Try it with a few sunflower seeds; few Parrots can resist these. I shall be interested to know how it progresses.

GENERAL.

Answered by THE EDITOR.

MARKED OR TICKED?

Wounded Soldier.—Please note that all communications must be authenticated by the proper name and address of the sender. If you will send your name and address, not necessarily for publication, we shall be pleased to make use of your letter.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Hartow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

Two Books which will shortly be increased in price. Readers of "Cage Birds" wishing to secure copies at the present low prices must order at once.

BRITAIN'S BIRDS

George Rankin.

BRITAIN'S BIRDS AND THEIR NESTS.

Described by A. LANDSBOROUGH THOMPSON,

With Introduction by Professor J. ARTHUR THOMPSON.

Contains 132 Coloured Illustrations by GEORGE RANKIN.

15/- net; per post 15/8.

"A magnificent bird-book; one of the finest productions of its kind."—"Morning Leader."

"Admirable coloured plates. The birds are accurate, life-like, and effective."—"Times."

"The plates will undoubtedly ensure for the book much popularity. They are most interesting to the student of Nature, and they will also be very helpful to the young ornithologist feeling his way towards a more mature knowledge of the bird world. The letterpress is as interesting and as well-informed as the plates are accurate and beautiful. The volume is a book of rare excellence."—"Scotsman."

"A book of reference humanised by excursions into vivid descriptions of actual hunts after birds, the Golden Plover, for example. The coloured illustrations are beautiful."—"Evening Standard."

BRITISH BIRDS AND THEIR EGGS.

With a New Method of Identification. **6/-** net; per post, **6/5.**

By J. MACLAIR BORASTON (*Member of the British Ornithologists' Union*).

Contains 136 Coloured Illustrations.

The study of natural history, and especially of bird life, is now the healthy hobby and pastime of many amongst old and young alike. Mr. Boraston writes for the beginner, his aim being to give to those seeing birds for the first time the simplest means of identification. He considers that this object is best attained by describing the most obvious characteristics of the birds—viz., their broad distinctions of colour and markings, gestures and notes. The birds are therefore shown here as they present themselves to the eye of the beholder, and their scientific grouping is given in a list at the end.

"Mr. Boraston is a naturalist who can write and bring into his book something of the woodland magic of the heart-beats and true surprises of the bird lover."—"Saturday Review."

"Mr. Boraston has a grace of style not often given to naturalists."—"Times."

W. & R. CHAMBERS, Ltd., 38, Soho Square, London, W.1, and 339, High Street, Edinburgh.

ADVERTISEMENTS—Continued from p. 232.

GIVE two Norwich, Border, or Roller hens, for Linnet or Goldie mule, must be pure, wild song: yours first; approval: Clarke, 74, High-st., Sydenham. (934)

EXCHANGE Crestbred cock for two cinnamon marked Norwich type hen or for good Siskin and Goldie, or sell 20/-; particulars: John Johnson, 10, Thoresby-rd., Mansfield, Woodhouse. (931)

YORKSHIRE cock, lovely song-ster, 1916 bird, cock Greenie, clear Bullfinch, mated twice, house-moulted, all in good condition, exchange for good healthy Norwich cock, 1916 bird: Draper, 47, Palmerston-st., Battersea Park-rd., London. (933)

Mainly British.

WANTED, good Norwich cock, exchange Goldfinch mule, Finch notes: Owen Jones, 32, Church-st., Wellington, Salop. (934)

EXCHANGE steady cock Goldie and cock Bullfinch for good cock Canary, sell 12/6: Insull, 17, Ashley-rd., Horne Bay. (932)

WANTED, Norwich cock Canary, exchange house-moulted cock Goldfinch; mutual approval: S. Jones, Saddler, Albury, Hadham, Herts. (931)

TWO grand cock Chaffinches, 2/- each; topping cock Blackbird, 3/-; 58lbs. wild seeds; what offers: Davies, Ferndale, Craven Arms. (931)

EXCHANGE five pairs Greenfinches and two pairs Chaffinches for pair Budgerigars: F. Roy, Benhooks Farm, Bishop's Stortford, Herts. (933)

TWO doz. cock Brown Linnets, 10/- doz., well caged; exchange cock Canaries, Mules; cash or deposit: Underwood, Metheringham, Lincoln. (934)

STEADY H.M. Chaffinch 6/6, exchange steady Siskin, Goldie, Brambling, Black-headed Bunting, or Twite; yours first: "Studio," 31, Brondesbury-rd., N.W.

EXCHANGE two splendid Chaffinch cocks, on feed and song, for good breeding Norwich or Yorkshire hen: Edward Tasker, 44, Cwrt-coch-st., Aberdargoed, Mon. (932)

SIX cock Linnets, mulers, for Roller cock or Norwich cock; two cock Greenfinches, two cock Chaffinches; offers; yours first: Marshall, Butts Lane, Wickham Soham, Cambs. (935)

BEAUTIFUL cock cage moulted Lesser Redpoll, 3/6; large F.M. cock Linnet, caged since October, 5/-; exchange both for yellow Norwich hen: James Stuart, Clifton House, Fraserburgh. (930)

EXHIBITION Yellowhammer, 4/-; Twite, 3/6; Linnet, 3/6; grand Goldfinch 10/-; yellow Greenfinch, muler, 4/-; large Hawfinch, 10/6; Chaffinch, 3/6; exchange for Norwich hens: F. K., 47, Twisden-road, London, N.W. 5. (934)

TWO pointed, nearly clear Goldfinch mule cock, also dark mule cup winner, Plymouth, Nov. 1916, or exchange dark mule, for big, cobby Norwich, non-flight, buff hen, with a big head: 24, Gifford-pl., Mutley, Plymouth. (932)

BIG, variegated buff Yorkshire, 12/6; steady young Goldfinch, 10/-; twice house-moulted Linnet, 6/-; all full song; box cages, 1/6, 2/-; inspection any time; exchange pullets: Scholes, 280, Oldham-rd., Middleton, Manchester. (934)

WANTED, good yellow Norwich cinnamon hen, 1916, big head, and Goldfinch, proved winner; exchange yellow Goldfinch Mule, Bramblefinch, winners, yellow Greenfinch, hen Redpoll, breeders, or sell, approval: Alexander, Leonardgate, Lancaster (933)

EXCHANGE two cock Chaffies, four cock Redpolls, two cock Linnets, some of them house-moulted, steady, and in lovely conditions, can win; sell lot 10/-, or offers in bird nets, cages, anything: Keighley, 61, North-Norman-st., Ilkeston. (932)

EXCHANGE splendid cock Greenfinch muler, Greenfinch hen mule, 1916, daughter of above and Goldfinch hen Mule, 1916, for two good Norwich hens; yours first: approval both ways, or sell first 15/-: Pretty, 46, Springfield-rd., Linslade, Bucks.

NOTICE to British bird exhibitors; house-moulted Linnets, Reed Buntings, Yellowhammers, Bullfinches, Twites, Greenfinches, Chaffinches; F.M. Linnets, Redpolls, Larks; write for price list, or exchange Canaries; approval: Anderson, Oswald Cottage, Forres. (930)

GRAND bull Yorkshire cock, in breeding condition, over 7 inches, 18/-, cheap; var. York hen, 7/6; H.M. Linnet, grand songster, 8/-; ditto Redpoll, 3/6; two grand Linnets, 4/6 each; big Bramblefinch, 2/-; Yellowhammer, a beauty, 6/6; also a good pair, H. Bullie and C. Greenie, very steady, 6/6; approval; stamp reply: all birds healthy and in good condition: Smith, 15, Forster-st., Hunslet, Leeds. (935)

Mainly Foreign.

PAIR adult Green Budgerigars, 8/6, carriage paid; exchange Norwich buff cock to value: Fee, 61, Penzance-st., Moor Row, Cumberland. (930)

SMALL White Cockatoo, real beauty, talking, 30/-, cage given in; exchange offers, birds, anything: F. Chadwick, Tool Dealer, Wrexham. (932)

SIX genuine, good talking Parrot, accept 40/- with good cages; exchange for Canaries or any livestock, Naturalist, 21, Brook-st., Manchester. (933)

EXCHANGE young Green Parrot and cage for Canaries, British birds, or Budgerigars; stamp reply: Bradley, 123, Cavendish-rd., Highams Park, Chingford.

PAIR Quaker Parrakeet, perfect health, £1; two new single breeding cages, 12/; lot of "oiners" tools, £1; exchange Old English Bantams, yours first: Johnston, 17, Watt-st., Forfar. (933)

Miscellaneous.

PIKE rod and tackle, 12/6; exchange for cock Goldfinch: Atkinson, Market-pl., Guisborough. (935)

WANTED, Flash mule, will exchange pistol, or 22 rifle, for good bird: Lewis, Winforton, Hereford.

OFFERS in Canaries, etc.; exchange, Scotch terriers, value 20 pair: Dawson, 689, Duke-st., Glasgow. (934)

GRAND Edison Gem, large horn, 60 records, sell £2 10/-; exchange gent's cycle: Kirkpatrick, 12, Lindisfarne, Carlisle. (933)

EXCHANGE silver-haired Yorkshire, for Whippit, Greyhound, anything useful; sell 25/-: 153, Oldfield-rd., Cannock. (933)

GENT'S, lady's, and girl's free-wheel bicycles, 25/- to 7/-; exchange Canaries, Parrot, Poultry: Swann, 176, Wellington-rd., Waverton, Lancashire. (934)

EXCHANGE Black Rosecomb Bantams eggs for two York hen hens, clear yellow marked buff: Wilkinson, Mount Pleasant, Riddings, Alfreton. (932)

LARGE Collie dog, 15 months, black and white, 8/6 each, 25/-, or exchange Borders or Yorkshire Canaries: John Dawson, 15, Bark Row, Dalkeith.

GIVE 5-plate Ensign Camera or grand pair show Hookers for Budgerigars or breeding aviary: Shepherd, 12, High-st., Old Hatton, Peterborough. (930)

TWO good breeding cages, singing Linnet and cage, 15/-; exchange singing cock Canary; your first: Ward, Ruby-st., Buckingthorpe-lane, Leeds. (934)

EIGHTEEN double-sided disc records, Winner, Zonophone, John Bull, for 1916 cock Canary, full song: Abbott, 70, Plashet-lane, Upton Park, London, E.6. (929)

NEW pony's saddle, backband, shaft tugs, reins, breeching straps, leather collar, 20/- lot, worth double; exchange Canaries, gent's suit: Ryder, 34, Osnaburgh-st., Regent's Park, London. (924)

EXCHANGE for real good Norwich or exhibition British, fine old copper warming pan, engraved brass lid, and 20 lbs. copper, quality not quantity wanted; approval, stamp: Humphrey, Westgate, Thirsk. (934)

SELL or exchange, two genuine goatskin rugs, black centres, white briders; bargain, 25/-; accept Norwich or Roller pairs to value; birds first: A. J. Eaton, Bk. S, Junction-st., Springfields, Wolverhampton. (929)

FIVE White Wyandottes hens, 1915, laying, prize strains, best feather, 32/-, carriage paid; Whippet, 3 years old, won four handicaps, exchange pair Crests; sell, 25/-: A. Ferguson, Hallbuildings, Kirkconnel, Dumfriesshire. (934)

SALE, billiard table, new condition, all sundries, 9ft. long, 5ft. 4 wide, £6 10/-; gent's cycle, sound condition, 35/-; exchange cycle for English lever watch; also two pairs of good Yorkshires, 25/- a pair; unflighted, ready to nest; approval: Brotherton, 118, Doncaster-rd., Rotherham. (925)

WILL give good value in boots, clothing, bedding, cutlery, etc., or household goods of any description required, in exchange for birds, Parrots, Poultry, Puppies, etc., or livestock of any variety: Livestock Exchange Stores, 61, Mount-st., Chorlton-upon-Medlock, Manchester. (935)

EXCHANGE or sell, one Roller schoolmaster, full song; two double breeding cages, loose fronts, sliding partitions; six Roller box cages, all new last season, with all utensils, will part exchange for lady's cycle, melodeon; offers anything useful, approval, stamp; particulars to: E. Ellis, 16, Carleton-st., Morecambe, Lancs. (930)

Aquarium.

FROGS, toads, spawn, newts, beetles, dragon fly larvæ, valueria: De Von, 114, Bethnal Green-rd., London. (925)

BITTERLING, Dogfish, Sticklebacks, Newts, Frogs, Beetles, Dragonfly, Larvæ, Snails, weeds, and all requisites for the aquarium; list free; catalogue of Aquaria and Vivaria, 1d.: L. Cura and Sons, Bath Court, Warner-st., London, E.C.1. (903)

Ferrets.

SPLENDID ferrets, good workers guaranteed, 6/-, carriage paid: Wantop, Short-st., Carlisle. (925)

FERRETS, workers, 6/6; Mongoose, only reliable rat exterminator, 30/-: De Von, 114, Bethnal Green-rd., London, E. (923)

Kennel—Dogs for Sale. Dogs for Exchange.

DOGS and puppies of all varieties bought, sold, or exchanged, no fancy prices, sporting dogs, guards, pets, and companions: Princess Kennels, 21, Brook-st., Manchester. (923)

Household Furniture, Utensils, etc.

LADIES BLANCHARD'S PILLS

Are unrivalled for all Irregularities, &c., they speedily afford relief and never fail to alleviate all suffering. They supersede Pennyroyal, Pil Cochia, Bitter Apple, &c. "BLANCHARD'S are the Best of all Pills for Women." Sold in boxes, 1½, by BOOTS' Branches, and all Chemists, or post free, same price, from LESLIE MARTYN, LTD. CHEMISTS, 34, DALSTON LANE, LONDON. Free Sample and valuable Booklet, post free, 1d. Stamp.

LADIES!

WOOD'S CHALLENGE REMEDY

Is guaranteed under the sum of £100 to cure when others fail. Far superior to Pills, Pellets, or any Continental treatment. For all cases of irregularities, however obstinate, CHALLENGE REMEDY is supreme. Price, 2/-, 5/-. Special, 12/-. Stamp for Advice. Est. 30 years.—MR. & MRS. A. K. WOOD, Medical Specialists, 20, Louis St., Leeds.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

THE LARGEST OF BRITISH SONG-BIRDS.

The Mistle Thrush is the largest of all our singing birds, being fully two inches longer than its relation the Song Thrush. Its merry piping is to be heard when most other of our songsters are silent, and in the stormy days of late winter and early spring the bird may be seen at the topmost branch of a high tree, singing as its perch swings in the gale. Our picture is a portrait of the fine specimen which has won 1st Prize at Ilkeston Show; 2nd at Sheffield, and other prizes for its owner, Mr. E. C. Green, Attercliffe.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bonafide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays, first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit system should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

MEDICINES.

"AILING Cage Birds and How to Cure Them," "Nutshell No. 6," an account of the troubles which beset captive birds, with the treatment and list of medicines to restore our pets to health. This will save you much discouragement and money, and costs only 2½d. post free. From "Cage Birds," 154 Fleet-st., London, E.C.4. Or 2d. from agents (lists frequently published.

SOFT MOULT. NOT SINGING.

If you have any birds you are relying upon for the breeding season that have gone into Soft Moult, we Guarantee you a perfect cure.

DITCHFIELD'S TONIC DROPS

are a certain cure for loss of voice, soft moult, slow moult, going light, feather plucking, and inflammation of the bowels.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to the birds, and for producing that smart tight appearance of the plumage so much desired by all fanciers.

These two Medicines, given on alternate days, will bring any bird into breeding condition.

DITCHFIELD'S SPECIAL LUNG TONIC

the grandest medicines ever introduced for chest and lung affections in cage birds. Can be given with absolute confidence to the most weak or delicate birds. All medicines can be given in the drinking water, and the birds take them freely, wth marvellous results.

All the above remedies are sold in **8d., 1/2,** and **2/2** bottles; two 8d. bottles for **1/2,** two 1/2 bottles for **1/11,** or three for **2/8.** P.S.—The 1/2 bottles are treble the 8d. size. All orders sent per return, post free.

FRANK DITCHFIELD, BIRD SPECIALIST, OLDHAM

Patronise a Patriotic Firm
There are no shirkers in our family; they all volunteered and are doing their bit. I can't give myself to the Army, being too old, but I will give you the chance of buying what you can't buy elsewhere. Look. African Grey Parrots with red tails, 30/-, 35/-, 40/- each. Bear in mind these are in stock, not on paper; we never advertise what we have not got, but send genuine African Greys at above prices on receipt of cash. We also have 43 of the most magnificent African Greys ever seen. These have been in our training room for months, and are now accomplished talkers and mimics, £3, £4, £5, £6, £7; extra specials, £8 and £10 each. If you want a screamer buy an Amazon, but if you want a genuine talker you must buy an African Grey. We have since March 16th to time of writing sent £105 worth of African Greys from our aviaries, but most of them have gone to New York. Same address seven years: John Day, Parrot Aviaries, 77, Porter-st., Hull. (941)

Club Reports.

GLASGOW (West End) C.B.C.

Meeting, April 13, Co-operative Hall, St. George's Cross, Mr. P. Allan presiding over a good attendance. Prize cards for British and Foreign bird show were handed out to those present. Two new members enrolled, J. McNeish and J. Urquhart. After business we had an extra lively hour, "A Hat Night." The President invited each of those present to put a question on paper, with the result that about thirty of great interest were asked and answered mostly in connection with the breeding season. The one in most demand was "A substitute for egg food." Several methods were discussed, but the majority favoured the recipe for egg cake as given through CAGE BIRDS. This debate lasted well past the time at our disposal, so an interesting meeting closed with a hearty vote of thanks to the chairman. Next meeting, May 11, Co-operative Hall, St. George's Cross, at 8, when we hope to have a lecture.—John Campbell, Sec. and Treas.

GATESHEAD C.B.S.

Annual meeting, April 7, Mr. Thos. Almond presided, in the absence of Mr. Holden, over a good attendance. Owing to the balance-sheet not having been gone over by the auditors it was left until next meeting. Auditors appointed for same, Messrs. Almond and Laidlow. Election of officials for year: Pres., Mr. J. Ford Maling; vice-pres., same as last year; chair., Mr. A. Holden; vice., Mr. T. Almond; committee, Messrs. Maddison, Wellsbury, J. Davidson, J. W. Lawson, R. Tindle, F. W. Laidlow, J. Liddle, W. Mather, J. Peirson, E. B. Hooper, J. Moor, J. McQuire, F. Roman, J. Cromarty, S. Lindsay, Rev. C. R. Appleton and Coultbard and Son; Sec. and Treas., W. Curry. Decided to leave rules as last year, rulescards on hand only to be given to new members. Show date fixed Dec. 8. Societies please note that we have held our show on second Saturday in December for years and please don't clash. Table Show for British at next meeting, May 12, at 6.30; judge, Mr. F. W. Laidlow. Classes: Linnet, Goldf., Bullf., Greenf., A.O.V. Mealbill; fee 6d. per cage. In connection with show singing competition will be held. New members elected, G. Williams, M. Wright. Fanciers invited to join; entrance fee 1s., annual sub. 2s. 6d.—W. Curry, Sec., 6, Roxburgh Place, Newcastle.

FIFE OPEN NORWICH P.C.

Meeting, Drill Hall, Mr. Smith presiding. Officers elected: Pres., P. McCue; Vice-pres., Wm. Melville; Sec., J. Mitchell; Committee, W. Grewar, R. Stewart, J. Forsyth, M. Smith. Agreed to alter name of club to Fife Open N.P.C. J. L. Mitchell, Sec. (pro tem).

SUNDERLAND C.B.A.

Meeting April 21, North of England Cafe, Station Street. Mr. Farrar presided over a good attendance. The classification for next feather show, July 14, was considered, and it was decided to have two classes each for Norwich, Yorks, Crest and C.B., Cinnamons, Borders, and Lizards, four British, one Mule or Hybrid, one foreign. Entry fee 6d. Prizes on sliding scale, with 2s. per class added from funds. Mr. W. Reid was appointed as judge, and the question of a room for the show was adjourned until next meeting. Two new members were proposed and accepted.—F. Riseborough, Asst. Sec.

CARDIFF C.B.S.

Meeting, April 17; Mr. E. J. Banks presided. The sub-committee appointed to draft rules re the Thrift Club presented the rules, and after considerable discussion these were amended. Rev. C. B. Jolliffe was elected Sec. of the Thrift Club, and Mr. Banks Treas. Resolved that the Thrift Club business start at 7.45 at each monthly meeting; members please make a note of this. Resolved that we send the profits of the open show, £12 16s. 9d., on to the "Evening Express" Starving Prisoners of War Fund. Through the whole of the evening having been taken up by the Thrift Club, it was decided that Mr. H. C. Smith read his paper at the next monthly meeting. Novices, here's a chance for you to learn how to feed your pets.—E. Thomas, Sec.

MOUNTAIN ASH F. AND F.S.

Meeting April 28, Napier Hotel, Mr. C. Horton chair. Several new members were proposed and accepted. Votes of sympathy were passed with the relatives and friends of the late Mr. D. S. Lewis, a late Vice-President, also with the relatives and friends of the late Mr. B. Hemus, of Cardiff, all members present responding in the usual manner. Decided to hold a First Feather show Aug. 2, with the addition of any other classes if any fancier would care to guarantee same. Classification and selection of judges to be decided at next meeting, May 12, at headquarters. No schedules, but full classification in Fancy Press. Mr. G. R. Rowlands, of Cardiff, delivered a very instructive lecture, which was greatly appreciated.—T. Holman, Sec.

LANCASHIRE AND LIZARD F.A.

Yearly meeting April 1, Volunteer Hotel, Oldham, Mr. Hampshire chair. The principal business was election of officers for ensuing year. Pres., Mr. A. Bradley; Vice-Pres., Mr. B. Clegg, Mr. J. Rukin; treas., Mr. J. Swalwell; chair, Mr. W. Moorby; and sec., J. Hampshire. Committee includes the whole of members. Re show patronage, a letter was read from Ardwick and District C.B.S., which will receive consideration in due course. Re show cages, all birds are to be shown in the standard show cages, as per rule; decided that specials be awarded at each patronage and club show during the season. Next meeting Volunteer Hotel, Oldham, May 6. Further information can be had from J. Hampshire, Sec., 7, Cowper Street, Brunswick Street, Oldham.

W. BROMWICH & HANDSWORTH.

Meeting, April 23, Ivy House Hotel, Handsworth, Mr. S. N. Taylor chair, and a good attendance. Decided to adopt last year's schedule for the two N.F. shows, June 16 and July 24. Sec. to ask Mr. J. H. Roe to judge the first and Mr. Weaver (Wolverhampton) the second. Birds to be staged at 5. Annual ramble takes place Sunday, May 20, final arrangements to be made at next meeting. After general business a discussion took place on 'The making of egg food and feeding young Canaries," several members giving their experiences in the use of substitutes for the usual egg with bread crumbs or biscuit; it being considered necessary, under present circumstances, to practice strict economy, where possible without harmful results.—F. H. Viles (Hon. Sec.).

WALLSEND C.B.A.

General meeting, Station Hotel, April 11. Mr. L. Simpson presided before a tip-top attendance, which shows our club is going on wheels. Mr. Crawhall will give a lecture at our meeting in June on "Inbreeding," so members make a note and rally in good numbers, as it will be very interesting. A discussion about annual show arose, and under the present circumstances it was decided to hold a two days' members' show, Nov. 2 and 3. We fixed N.F. show for July 14. Messrs. T. Dixon, H. Bennet, and J. Maddison were elected to judge annual show. I had only one reply re N.F. show, so it was decided to elect judge at next meeting in May, also to draw up schedule for N.F. show at our last two meetings. New members elected: W. Furness, Dunning, Coultard, J. Finley, Archbold, R. Tindale. Fanciers wishing to join just forward their names to me.—G. Greenwell, 17, George Road, Wallsend.

SOUTHERN ROLLER C.C.

Meeting April 24, Bazaar Tavern, King Street, London, W. Mr. H. Gutierrez presided over practically a full attendance of the London members. After a considerable amount of correspondence relating to club matters had been read, the sec. proposed ten new members, and enquiries addressed to him point to a probable further big increase of membership by next meeting. It was incidentally mentioned during the meeting that the fascinating and scientific hobby of Roller Canary breeding and training is one that might now reasonably appeal to a great many people who previously were interested in more expensive hobbies, such, for example, as dog, poultry, or pigeon breeding. The cost of upkeep of Canaries is so small in comparison with that of other pets that it should prove a solution to many who, whilst desirous of keeping some kind of pet, are faced with the present difficulty of obtaining supplies and the high cost of food for them. By the inclusion of Mr. W. H. Shepley, M.R.A.M., the club has now the honour of having three experienced judges on its committee, viz., Mr. F. A. Lester, Mr. F. E. Fisher, and Mr. W. H. Shepley. Next meeting at new headquarters, Imperial Restaurant, Old Bailey, May 29, where meetings will be held in future on the last Tuesday in the month at 7.30. Jan. 10, 1918, was fixed as the date of our first open show; date of members' show to be decided later. The club has been fortunate in securing the services of Mr. F. E. Fisher, the well known and popular Roller judge, to give the first lecture on "Some training reminiscences of the great Glucke Tour" at our next meeting, and in view of the recent correspondence appearing in "Cage Birds" on this much discussed and complex tour, this lecture should prove of very great interest to fanciers. They are recommended to be present to hear it.—R. Dugdill, hon. treas. and reporter.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

Wigan Roller Club.—May 9, Legs of Man Hotel, 7.30. Club business.—P. Greenall.

West of Scotland.—May 5, Nelson Temperance Hotel, 7.30. Hat night.—W. Hutchisson.

BOBBIE.

The Trench Canary.

An article over the initials E. C. S., appears with the above heading in the "Daily Mail" of April 28. If the employment of Canaries as gas detectors means the protection of human life, there is something to be said in favour of it, but the real bird lover will regret that it has been found advisable to use the birds for the purpose. Also if it be true that an individual bird may be gassed seven times, and still be fit for service, the effect on the birds, provided that hety are placed quickly out of danger, would appear not to be serious. The article is as follows:—"The general public knows little about that most useful and life-saving animal—the trench Canary. He or she, whatever may happen to be its sex, is quite unknown to the infantry. The gunners would scorn so insignificant a mascot. But ask the tunnellers of the Royal Engineers—those human moles whose greatest joy in life is 'blowing the Boche'—and they will tell you that the Canary has been an invaluable ally in underground warfare. The trench Canary does not flutter in a gilded cage or sing in the scanty sunshine of La Belle France. You will have to climb down a mine shaft or two and scramble through tiny, dark galleries to make his acquaintance. He is usually to be found in a small wooden cage ensconced with several others of his tribe in a cosy dug-out far beyond the reach of the heaviest howitzers. One does not hear much singing in the trench Canaries' dug-out. They are most of them too busy recovering from gas attacks. 'Cruelty to animals!' a reader mutters over his meatless breakfast. No, not cruelty. The Canary is just 'doing his bit,' the same as everyone else. Bobbie is the veteran of the Canaries in one part of the line. If he were a man he would have many medal ribbons 'up.' He is 'some' bird, is Bobbie! He has been gassed seven times. 'Surely the gas doesn't come as far underground as this?' you question. 'We don't mean the chlorine which they squirt out of cylinders on the surface,' says an Engineer officer who is willing to explain to you. 'That's a picnic in these days of gas masks! Besides, you can see it coming rolling along before the wind, and it gives you lots of time. Our gas, known technically as carbon monoxide, is invisible and has no smell. If you happen to get into it—for a few seconds only—it's all up.' 'But if you can't smell it and can't see it, how do you know it's there?' 'That's where the Canary comes in,' says the officer. 'When a mine is exploded, whether by Fritz or ourselves, gas is given off It may find its way into our galleries or it may not. You have your anti-gas apparatus all ready, and grab Bobbie's cage or that of any other Canary in whom you have confidence. You keep the cage well in front of you and high up, and push on, watching Bobbie as you would a rival for a lady's affections. Bobbie knows what to do—you can trust him. He sniffs like a dog on a strange scent. If there's gas, down goes the Canary flat on his back, toes up in the air.' 'I suppose you miners get plenty of honour and glory?' you ask. 'M.C.'s galore and a few D.S.O.'s, but I don't know of a tunneller having got the V.C. yet,' replies the veteran with the two stars and the ribbon of the Military Cross on his muddy tunic. 'But there's someone I know who has certainly earned the V.C., and that's Bobbie, and all he gets is an extra ration of his favourite seed.'"

TO A SPARROW.

At early morn, when a' is still,
Ye're chirpin' on my window sill,
As there ye feast—wi' richt guidwill—
On humble fare;
Neglected ye'll ne'er be until
My cupboard's bare.
Winter's sleet, hail, rain, an' snaw
Ha'e nae effect on thee ava;
Ye fecht yer way richt through it a',
Wee sturdy freen;
Nae gilded cage, in lordly ha',
Ha'e ye e'er seen.
The life o' man is much like thine,
Meetin' wi faur mair storm than 'shine;
But this ye teach him—ne'er tae pine,
Tho' fortune froon;
For nane but cowards sigh and whine
An' knuckle doon.
Let ither rhymers sing in praise
O' bonnier birds, in tuneful lays;
Ye're plucky, cunning, thrifty ways
That ding the lot;
An' I'll uphand thee a' my days,
Wee brither Scot.

Cardiff Hands Nearly £13 to Charity

Kindly allow me through your valuable paper, CAGE BIRDS, to thank exhibitors who exhibited at our last open show, writes Mr. E. Thomas, sec. Cardiff C.B.S. We had a record entry, and although our expenses were heavy, we made a profit of £12 16s. 9d. This has been sent on to the Starving Prisoners' of War Fund, thus helping on a good work.

An Important Yorkshire Canary Meeting.

A joint meeting of the Yorkshire C.C., National Green-Marked Y.C.C., and the Cinnamon-Marked Y.C.C., writes Mr. R. Garnet, will be held at the Oddfellows' Hall Hotel, Thornton Road, Bradford, May 5, at 7, when it is hoped there will be a good attendance of members of all three clubs, to discuss the standard for marked Yorkshires as adopted by the Yorkshire Union.

Evenings for Fanciers.

At the Griffin Hotel, Boar Lane, Leeds, May 5, the Leeds C.B.S. is holding a table show of British birds; at the Oldham Hall, Liverpool, May 10, at 8, Mr. W. R. Knowles will lecture before the Liverpool B.B.A. on "Ailments of Young Birds"; at the meeting of the London and Counties A.C.B., Victoria Hotel, Charterhouse Street, London, E.C., May 5, at 8, Mr. W. G. Sanders will give a lecture on the Yorkshire Canary; at the Reid Hall, Springburn, May 9, the Springburn and Possil Park C.B.C. will have a show of British and Mules; Mr. E. Holroyd will address the meeting of the Halifax P.S. at the Plummet Line Hotel, May 5, at 7.30, on "The Doctor in the Bird Room"; at the meeting of the Swansea C.B.A., Elysium, High Street, May 5, at 8, Mr. S. J. Nicholas will lecture on "Selecting, Moulting, and Exhibiting British Birds"; Mr. J. Robson will give a lecture at the Trinity School, Beresford Street, Woolwich, on Mules and Hybrids, May 8, at 8, before the members of the Plumstead and Woolwich C.B.S. and on "Rearing Young Canaries" at the meeting of the Crystal Palace and Penge C.B.S., May 9, at 7.30, at the Alexandria Hotel, Penge; at the meeting of the Blaydon-on-Tyne C.B.S., Wesleyan Chapel Smoke Room, James Street, May 5, at 7.30, Mr. G. Dobson will lecture on the feeding of birds and the management of the bird room.

Home from the War.

I have been wounded once again, writes Mr. H. Moore, this time losing my left hand. I am going on satisfactorily, and no doubt will get my discharge eventually, unless they fit me up with a hand good enough to go to the Front again. In the event of a discharge I shall carry on, and take an active part in my business, "the Lambeth Aviaries," of which I am still the proprietor.

I have just been invalided back from France after spending several months out there of the vilest weather imaginable, writes Mr. Roland Bamber, a respected member of the London L. and P.O.S., and late hon sec. of the Ealing and Hanwell C.B.S., in a letter to Mr. G. Crabb, president L. and P.O.S. It has finished me with a good dose of nephritis, a kidney complaint which means I have to lie on my back for two or three months, and drink milk only, no solid food allowed. Of course, all my fine stock of Yorkshires have gone, and I am afraid it will be a long time before I get any more according to the price of everything. I see in CAGE BIRDS that some fine outings have been arranged. I hope I shall have the pleasure of attending them later on. I shall have to go in for the cheaper varieties for the time being, such as Greenfinches, and Sparrows.

(Mr. Bamber is in the Victoria Ward of the Royal Hospital for Diseases of the Chest, 231, City Road. Visiting days are Thursdays and Sundays, from 2 to 4, and he will be pleased to see old friends.—ED., CAGE BIRDS.)

Migrants Arriving.

A flock of about 50 Swallows and Martins, says "The Times," has been seen flying over the Kennet, near Newbury, and many other summer birds have now arrived, including the Cuckoo, Willow Wren, Whitethroat, Wheatear, and Chiffchaff.

When in Doubt—Ask!

The novice fancier, writes Mr. E. Battersby, occasionally requires the help of one who knows more about the cage bird fancy than he does himself, in fact, he is very often in doubt as to certain technicalities, little things that are not provided for in any of the several books about birds he has diligently perused. With a view to assisting those members of the North Liverpool and District C.B.S. who require valuable advice the following members have been appointed a Consultative Committee, and their services are available without any charge:—Yorkshires, T. Rowlands, 21, St. Chrysostom Street, Liverpool; J. Lobb, 426, Hawthorne Road, Bootle, Liverpool. Norwich, A. E. Wilkins, 18, Keith Avenue, Walton; R. Bratherton, 20, Stanley Street, Fairfield. Borders, E. Battersby, 154, Longmoor Lane, Aintree; R. Bratherton, 20, Stanley Street, Fairfield. British Birds, A. E. Wilkins, 18, Keith Avenue, Walton; J. Lloyd, 33, Briardale Road, Mossley Hill; H. Satterthwaite, 162, Knowsley Road, Bootle. Interviews may be arranged by appointment.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

The Dandelion.

ONE can hardly write of dandelion without conjuring up visions of boyhood days in field and meadow, where its attractive domes of silky hairs used so much to delight us, and where the little Goldfinch used so persistently at this season to pluck its feathered seeds. He will have to wait longer than usual for his supplies this year, though there is now every prospect of a good harvest in the near future.

The family of plants to which the dandelion belongs is one of the most difficult with which the botanist has to deal, and comprises nearly ten thousand species. It is not surprising, therefore, that amateurs experience difficulty in identifying these puzzling flowers, and that mistakes are unusually frequent. It is hoped, however, that the few details given here will enable all who study them to distinguish this useful plant from its innumerable near relations.

In the true dandelion (Taraxacum vulgare Lam.), all the leaves spring up from the surface of the ground, forming a kind of dense rosette, from the centre of which the flowers uplift their heads. There are no leaves whatever upon the flower-stalks themselves, such as are to be found in many nearly-related species, nor are the flower-stalks branched in any way. They are just simple, hollow stems, each with a single, large flower-head at the summit.

The characteristic form of the leaf is shown in the accompanying sketch, and the peculiarly-shaped, backward-pointing lobes should be noted, as also should the numerous recurved green bracts at the base of the flower-head. The drawing also shows the ripened head, with many of the fruits already missing, for when this stage is reached the lightest breeze is sufficient to scatter them far and wide.

The dandelion has a long, stout, black root, from which the well-known medicinal extract is prepared, and as the dried roots were formerly imported in immense quantities from Germany, there is now a great scarcity in this country, and prices have risen by leaps and bounds from about 40s. a hundredweight to over 130s., so continuous is the demand for this useful herb.

Unlike many of the other plants dealt with in these articles, the dandelion does not wither away and die after producing its flowers and fruits, but continues to live on for many years, throwing up an abundance of leaves and blossoms every season, and increasing rapidly in size.

Dandelion is undoubtedly Nature's own tonic in the bird world; its leaves, seeds and roots possess medicinal properties of the greatest value, and coming at a season when our pets may perhaps be suffering from the effects of an over-fattening diet during the winter, it cannot be too highly valued. Its beneficial action on the liver in such cases is beyond dispute, and even before the seed-heads are ripe and fit for gathering, the tender young leaves, which are now so abundant, may be brought into service. Dandelion is, in fact, one of the best correctives we have for those forms of illness resulting from an over-stimulating diet, and is particularly useful during the breeding season.

THE DANDELION.
(A) Flower partially closed. (B) Single fruit detached. (C) Ripe seed head. (D) Leaf.

We are now rapidly approaching that time of the year when for just a few weeks the dandelion is at its best, at least so far as readers of CAGE BIRDS are concerned. You may, of course, gather dandelion seeds right on until late autumn, but if you let the next few weeks pass by without getting in a full stock of this valuable food, you will have allowed a golden opportunity to slip away which will not present itself again for another twelve months.

One has to watch patiently for this critical period in the dandelion's life, for the proper time to gather the heads is just before the final expansion shown in the sketch. A little careful observation will soon teach one how to tell when this stage has been reached; the head is closed, and the withered florets have fallen away, just disclosing the tips of the well-known silky hairs. These heads should be snipped off at this stage with a pair of scissors, and afterwards spread out in the sun at the earliest opportunity, to enable them to open and dry before any kind of decay or mildew sets in.

As in the case of shepherd's-purse, already referred to in these notes, dandelion leaves are often alive with tiny creatures of the insect world, which, of course, add considerably to the usefulness of this invaluable plant.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed, "The Editor, CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpense. Answers will appear in this column.

I was pleasantly surprised to see my Cardiff winning Yellow Border hen on the front page of our valuable paper, CAGE BIRDS, writes Mr. M. Tranter. I am certain that your artist must have scrutinised the bird very carefully to have produced such a life-like picture. I would like to say that I bought her from that well known breeder and exhibitor, Mr. G. Bennett, Kelso. I always considered her good value for the price paid. This hen will, I am sure, be heard of again, but will be shown under the joint names of Lancaster and Tranter.

The opening article in the April issue of the "Avicultural Magazine," the journal of the Avicultural Society, is on the "Maned Goose," by Hugh Wormald, with an illustration by the author. Miss Rosie Alderson contributes a delightful article, giving her experiences with tame "wild" Robins. Dr. A. G. Butler writes on "Capacity in Nest Construction," and other articles are "My Moreporks" by an Old Australian Birdlover, Australian Finches, reprinted from "The Emu," and "A Blue-Grey Variety of the Rook" by E. W. H. Blagg.

The Value of Contest Linnet.

At a recent singing contest wherein the winning bird beat the second by seven seconds the birds changed owners after the singing, the owner of the 2nd paying £3 into the bargain.

The Nationality of the House Sparrow

Writing to "The Observer" on the everlasting question: The Sparrow and the Crops, Mr. H. S. Davenport says in conclusion: "How many people, I wonder, know what the Sparrow really is, or whence it originally came? It is not an indigenous bird at all, but an Italian intruder, addicted to destroying the balance of nature!"

Country Rambles.

The ramble of the field section of the National British Bird and Mule Club on Thursday, April 26, was from Theydon Bois to Loughton. The party left Liverpool St. at 2.5, arriving at Theydon Bois at 3.7. It turned out to be a splendid spring afternoon and a very enjoyable and interesting time was spent. About 23 specimens were found, but no nests. Among the most prominent were the Chaffinch, Coal Tit, and Willow Wren. One noticed very strongly the great dearth of bird life. The outing for Saturday, May 5, is Ickenham to Denham and Uxbridge; train leaves Baker St. for Ickenham at 2.3.

Money Waiting.

Kindly ask those who have sent postal orders and cheques for the Roller cock, writes Mr. Wm. Smith, High Street, Bedlington, to forward stamped addressed envelopes, as stipulated in the advt., and I will return the remittances. I had 25 postal orders and four orders by telegraph for the Roller, and six for the Cinnamon Norwich.

I have received a telegraphic money order for £3 from Leigh for three pairs of Rollers, but without name and address, writes Mr. W. Gardner, Kirkham; will the sender please write. I received seven telegrams on Friday, and up to now I have received 150 letters with enquiries for my Rollers. I cannot reply separately, as my time is limited, so I ask you please to insert this in your valuable paper, as the birds are all sold.

The Sparrow Problem.

Amidst the multitude of letters referring to the House Sparrow which have appeared lately in almost every paper, some full of sloppy sentimentality and others damning the Sparrow even beyond his deserts, it is refreshing to find a letter, over the initials T.A.C., in the "Manchester Guardian," which strikes just the right note. Part of this reads as follows:—

"The Sparrow problem is a serious one, but absurdly extravagant statements have been made both for and against the bird. Some people argue as if the bird was a regular and efficient insect-eater, whilst others grossly over-estimate the damage it does. Nevertheless the Sparrow is a very serious menace to our depleted food supply, and it would be wrong to decline to face the fact.

The great danger of attacking the Sparrow lies in the methods employed; unless the war is waged against the Sparrow alone there is the possibility of very serious harm being done to insectivorous birds, thus destroying the very best and in some cases the only protection we have against insect and other pests which can unchecked cause famine. Level-headed economic entomologists and ornithologists should be consulted before irresponsible children are employed to keep down Sparrows. Whatever means are adopted, however, the destruction of the eggs of the House Sparrow is probably the most merciful method."

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

THE FEEDING OF FINCHES AND CANARIES.

By J. JEFFREY, Harborne.

In this lecture, given before the members of the West Bromwich and Handsworth C.B.S. Mr. Jeffrey suggests that various seeds other than the usual canary seed and rape might be given to Canaries, not only to the benefit of the birds, but also with a view of reducing the seed bill.

WE all have our own individual experiences, based on the circumstances under which we happen to be placed in our daily calling, and it is only when we meet together and relate those experiences that we are able, as a body, to come to definite conclusions on the different subjects that present themselves to us.

I propose to take up the subject of feeding our pet Canaries, because from the experience I have gained on the feeding of wild birds I feel convinced that we are far too conservative in our mode of feeding Canaries. Considering the different properties of the different kinds of seed, I think we should be far more successful if we adopted a more liberal menu in feeding.

How Various Seeds Help.

In one kind of seed we get colour, in another flesh-forming substance, in another bone, and so on. If you want a good coloured Goldfinch go for those who have moulted out on a liberal supply of boar thistles. I remember finding a flock of these birds that had been feeding on this kind of food on a vacant farm that had run wild. I have never seen such a crop of boar thistles before or since, neither have I seen such a grand coloured lot of birds as I had from this crop of thistles. The birds came for miles all through the winter, but those that were reared in the district were a long way ahead of the others for colour.

If you want to catch a good-coloured Bullfinch get a bird that has moulted on blackberries. I once moulted a lot of these birds almost entirely on this berry, and their colour was grand. A good coloured Linnet may be obtained by moulting on charlock and poppy seed.

I am going to ask three questions, and answer them according to nature's way of dealing with them. My first question is: Do we give our Canaries a sufficient variety of seeds? I answer in the negative, and will proceed to show how some of our wild birds feed.

Bear in mind that in every season in the year the wild birds have from three to four different kinds of feed which they visit during the day, and if you want to adopt bird catching for a hobby you must find those different feeds, knowing that if there are birds in the neighbourhood they will visit them sometime during the day, though you may often have to wait hours, not knowing which feed they are on first.

Now let us take the Goldfinch for instance, and see the sample of feed that this bird gets during the year. The seed of the Mallow is the principal winter diet, and in dead winter, when the other seeds are getting scarce, this is the one that he visits more often, taking in turn the old hardhead pieces, wild hops, and teazel. Then come the dandelion, summer thistle, boar thistle, blue buttons, hardheads, Scotch thistle, and groundsel; what a splendid variety.

The Wild Bird's Varied Menu.

Now let us see how the Bullfinch fares; the principal winter diet is privet berries and dock; then come the buds of the damson, currant and gooseberry, then the bloom of the privet and nettle; then plaintain and blackberry; then dog rose and ash, and numerous grass seeds.

The Brown Linnet, Chaffinch and Green Linnet have even a greater variety than the two former mentioned. Charlock, hardheads, and poppy form their winter diet, but in the spring of the year they visit the different allotments, and play havoc with radish, onion, lettuce, parsnip, cabbage, turnip, chickweed, groundsel, and a variety of other small wild seeds.

Now if nature has decreed that these birds shall feed on such a large variety of seeds, why should we shut up our Canaries and only allow them a diet of Canary seed, and give only occasionally any other kind of seed. Don't you think also that by not collecting many of these seeds during the summer months we miss a grand opportuntiy of reducing the seed bill?

How easy during the summer rambles to put a paper bag in your pocket, and a small pair of scissors, and snip off the thistle heads that are ripe, and let them fall into the bag without handling them at all. In this way quite a store of thistle may be gatbered during the season. The same thing applies to the dandelion seed, plantain seed, and hardheads. I know of no seed so plentiful as hardheads in nearly every country district, and along the railway embankments, and when you snip off a ripe hardhead you are gathering from fifteen to thirty good seeds, equal to a good sample of Canary seed.

I am afraid when many of us have our evening walks we forget our birds altogether, and miss a fine opportunity not only of giving our birds a treat, but of being beneficial to them in other ways, and saving the seed bill into the bargain.

There is another matter for consideration, and that is the manner in which these seeds are eaten by wild birds, and this is rather an important matter, because it affects the digestive organs of birds to a very large extent.

Why Freshly Caught Birds Die.

Many wild birds are lost annually because they are taken too suddenly from their mode of feeding, and put on to hard dried seeds. All seeds that have just become ripe are of a soft moist nature, and those that are shed are kept nearly the same or even more sodden by the rain and dampness of the ground or grass into which they fall.

You have only to examine them, and you will soon be convinced that they are much more easily digested than the hard dried seeds we buy for our birds, and that is why so many young birds die when first caged, because they cannot digest the seeds in that form.

I am not an advocate of scalded seed, except summer rape, with soft food; this I find they eat readily, but not in any other way. The best plan I find is to get a few shallow boxes, sprinkle the bottom with some sharp sand, then put a layer of summer rape, linseed, hemp, or Canary, and just cover it over with another layer of sand. Keep moist, and cover over with a piece of glass, and you will very soon get some sprouting seeds.

Only let it just show itself through the sand, then stand it to dry for a day, and the sand will run through a sieve and leave you some good sprouting seed behind, which the birds will greedily devour, especially during the breeding season, and both young and old birds will thrive well. I have known hens that would not feed the young on ordinary diet feed at once on finding this in the bottom of cage.

If you were to examine the crop of a young Brown Linnet, or other wild bird, you would find a good percentage of sprouting seeds or buds. Let us then, as fanciers, be a little more speculative, and give our pets a treat in this manner once or twice a week or daily during the breeding season. This can be done by having a double set of boxes, and planting every week sufficient to last the week.

The Value of Insect Food.

This brings me to my second question: Is insect life requisite for our Canaries? This I shall answer in the affirmative, and try to show you how some of the wild birds feed in support of my answer.

Let us take the Goldfinch, Green Linnet, Chaffinch, and Yellow Hammer as examples. I have had considerable experience in the catching of Goldfinches at the back end of the season, and for some time I could not make out what these birds were after on the old boar thistle heads and teazel heads. Certainly there was not a particle of seed in them, and yet the birds would stay for a considerable time pulling them to pieces.

Then I discovered that a white insect similar to what you would find in an apple or pear when grub-eaten would get into the heart of these heads, there to lie dormant during the winter, and it was these that the Goldies were searching for.

I have also been successful in pulling several ailing ones round by getting them to feed on gentles in the chrysalis state, that is, when they had turned brown; also mealworms are very beneficial to them, and there is no doubt that these birds eat several forms of insect life when it is so plentiful during the breeding season.

Chaffinches only come into song as the insects begin to make their appearance, and a great proportion of their diet, both for themselves and their young, consists of insect life. The same thing can be said about the Green Linnet, who will devour insects greedily when kept in confinement. The Yellow Bunting practically feeds its young on insect life, green caterpillars principally. The Black-Headed Bunting, and other species, are equally as fond of insects.

Now, if insect life is necessary for these wild birds, why should it not be necessary to an extent for our Canaries? Yet how many ever think of adding this food to their bill of fare during the breeding season. I do know this, that they are particularly fond of dried English ants' eggs, and my Canaries have a good supply during the ant egg season.

Now, as time is getting on, I will refer to my third and last subject, viz., do we give our Canaries a sufficient supply of green food? This I answer in the negative.

My experience of wild bird life is that a good percentage of sprouting seeds or buds is always to be found in their crops, and a Bullfinch will almost rear a nest of young on the bloom of the privet.

I am sure if we were more speculative in this direction we should be more successful in our breeding operations. Birds must have a good proportion of green food, and sprouting seeds is a safe way of supplying that need. Make a practice of planting so much every week according to your needs.

Apples are a fine thing, and can be given all the year without doing any harm either to young or old birds. Brussels sprouts are also good. I know of a bird that lived for weeks in the open in dead winter on Brussels sprouts. It came to my garden daily, and would stop for hours feeding on them.

I was rather interested, and thinking it was a hen that had escaped from a cage or aviary, left it unmolested for weeks, and watched carefully to see how it went on. To my surprise, one day it started into full song in the bower over the back door of one of my neighbours, and there were very soon half a dozen people trying to catch it. But it was not long coming to my Brussels sprouts. I threw it a handful of seed, but it took no notice whatever of the seed, so there was no chance of trapping it, and I made a lime snare for it, and caught it very quickly.

Surely this ought to convince the most sceptical that green food is most essential. Then let us be more persevering in the gathering of dandelions, plantain, hardheads, thistle, teazel, etc., during the summer months as a treat for our birds.

Some Observations by a Novice.

By F. ONSLOW.

A Lecture given before the members of the East Ham Cage Bird Society.

I HAVE been asked by the members to give them a paper, but I am afrad that in complying with the request I shall probably be repeating a good many things they have already heard, and telling them what they already know. Being hardly a seasoned fancier I can only ask the indulgence of the older fanciers, who will probably bear me out in my address, and the beginners may be able to pick up some of the suggestions to advantage.

As a secretary I have visited a few bird rooms and I have become acquainted with fanciers who have liked some things which others have disliked, and vice versa, and I will endeavour to embody a few of them in this evening's discussion. I will group my first batch of likes and dislikes under the heading of cages and appliances, and will give some idea what kinds I think are advisable, and what are not.

Cages and Perches.

The size of the cages should be the first thing to be considered, and should be studied according to breed. Yorkshires, for instance, should have a fairly high cage, or else the perches must be placed low down so as to enable the birds to have plenty of head room. It always seems to me that unless you do this the birds assume that crouching position so detrimental to a Yorkshire, for as soon as a Yorkshire lies or crouches over the perch he drops his tail and then you get "hoopy" tails.

The perches in some cases are also to blame for this, some fanciers preferring round perches to the oval ones, but you have only to watch the bird on an oval perch and you would soon discard all your round perches, especially in breeding time.

The fixing of perches has always been a trouble to me. My method of fixing is to drive into one end of the perch a brad with the head cut off, and bore a small hole half way through to the back of the cage which then receives the end of the perch with the brad, the other end being wedged between two bars of the wire front, leaving about an inch to protrude, so that you can handle the perch without putting your hand inside the cage. This you will find better than putting your hand inside the cage, for if you have a hen nesting she is sure to come off as soon as your hand goes inside the door if she is at all nervous.

Regarding the use of material to cover floor of cages, some fanciers like sand, others sawdust. Personally, I prefer sawdust, because sand has no absorbing properties and forms a kind of cement with the birds' droppings, which ultimately cakes on the feet of the birds, whereas sawdust dispenses with this inconvenience, besides being ever so much cheaper.

Trays are generally used in the bottom of cages, but these I think are more nuisance than they are worth. When you are making your own cages it takes extra time and labour, besides accurate fitting, and I find they require a bit of pulling out and getting back again, especially if the sawdust or sand gets wedged over the side or end. The red mite gets underneath them as well, though I think this does not matter much, as you can generally get them easier; anyway, I think many fanciers consider them unnecessary.

Many fanciers prefer the size of the cages to be anything from 24in. to 30in. long, 16in. high, and 10in. from back to front, others generally longer, but in my opinion it is well to make your cages according to the size of your room.

Again, the question of cages generally involves racks, and these are a nuisance. If I could do without them I would, and in their place have nails in the wall and cages hung on them. In my own room, through circumstances, I am compelled to have a rack on one side, but on the other side I have my cages hung on the wall. When they are in this position they are easily taken down, cleaned, and put up.

Should you use a rack the best thing is to drive a few hobnails in, so that the cages rest on them; this robs the red mite of a favourite hiding place. Besides this, should you have any mice in the room it would be difficult for them to get into the cages when they are on the wall. In one of my visits I noticed a very good way of fixing the perch which goes along the front of cages, and that was, to glue two small wedges on each end of the cage and the perch simply drops down on to them. This does away with cutting the perch the exact width of the cage, and jambing it in.

Regarding the bird room itself, this can be made nice by keeping it tidy, and when one has not already got oilcloth or lino the floor can be done over with floor stain and varnished; this produces quite a good effect with very little expense.

I do not intend to go into the question of feeding and preparing for breeding, as probably the usual methods of feeding are generally well known. The same applies to getting birds into condition, for this needs nothing but judicious and regular feeding with copious use of the bath.

Some Useful Hints.

One thing I have always found very useful is to have about half a dozen cages about 12in. square in which you can separate the birds you intend to show. In this manner each bird has all the food you give it, which it probably would not get if it was with other birds, and its plumage does not get damaged in scrimmages for the tit-bits. I find that you can get better results by getting about six birds into condition that are fit for exhibition than by trying to get all your stock into the same fitness, and then picking out your likely birds. These extra cages will also be found useful to keep your cock in during the period before breeding, and, considering their size, they can be stored in a corner where other larger cages would not go.

When the time comes for exhibition it generally happens that a fancier starts thinking about painting his show cages, whereas this could have been done during the light summer evenings, and when all were cleaned and painted they could have been wrapped up in newspaper and stored on the shelf. One or two in which to train your birds, and get them used to show cages may be left out, and then you have only these to paint, should you require them. It is frequently the case that a man comes into the show-room apologising for his lateness in bringing his entries by remarking he had to clean or wash his cages before he came. The best thing is to imagine the show a day before it actually is, then you can get your things ready in time.

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds. Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. W. Porritt, 21, Cowbar Cottages, Staithes, R.S.O., Yorks.

Is Tredegar C.B.S. Dead?

SIR,—In reply to the above question in last week's issue of CAGE BIRDS, if "One Interested" will sign his proper name, I will gladly answer his question, but no further notice will be taken of any correspondence written over a nom-de-plume.

W. B. WATKINS.

More Homing Redpolls.

Back Every Day for Nine Years.

SIR,—In reply to Mr. Ferguson's letter, I would like him to know that when living in Hackford Road, North Brixton, some years ago, a friend of mine living a few doors away had a Redpoll, which was taken into the garden, and the cage hung on to a bower at 9 every morning, the door opened, and left there till sunset. The bird used to fly to an orchard situated at the back of the garden, and return several times during the day to its cage. At sunset the bird would return again, and I myself have on more than one occasion walked up the garden path, taken the cage down, and hung him up in the room where he was kept. This had been going on for a period of nine years up to the time of my removing.

F. C. HENRY.

A Common Fate of Pet Birds.

SIR,—Seeing in CAGE BIRDS of April 21 Mr. Ferguson's Homing Redpoll, I write to say that I had one which I had caught with nets. I let him loose about the house, and it always slept in a Lark's cage, so one day I let him outdoors. He was away a few hours, and to my surprise he came back, and went in through the drinking hole of the Lark's cage, which I had outside with other birds. Finding him so tame, I sent him down the road a hundred yards or so with my little girl to let fly several times, and it always came back, and would go through the hole in the Lark's cage, but one day it was on the ground after seed, and my neighbour's cat had it, so that ended by pet homing Redpoll. Mr. Ferguson can thus see they are very easy to tame.

W. GROVES.

Rambles and Reasons.

A Treat for Liverpool Fanciers.

SIR,—Country rambles of an educational kind usually engage the attention of Cage Bird Societies during May and early June, when wild bird nests are full and in plenty. These rural excursions into the bird world provide the novice cage bird fancier with much useful first hand information, and are a source of great pleasure to all the participants. For instance, the young ornithologist will soon learn how to distinguish birds, their nests, and their eggs. Nor is this all, for there is the botanical side of these rambles, by no means the least interesting.

North Liverpool and District C.B.S. hold two rambles each year; the first for 1917 takes place on Sunday next, when some of the highways and byways of charming Cheshire will be explored. Members and friends are cordially invited to attend. Meet at the Schools, Royal Street, Liverpool, N., at 9.30 a.m. A pressing invitation has been extended to the Wallasey C.B.S., who are asked to join their Liverpool friends at Bidston Church at 11.

In Defence of the Bullfinch.

Buds or Insects?

SIR,—With reference to the letter of Mr. J. A. Rogers Boyd in CAGE BIRDS of April 14, which is reprinted from the "Irish Times," I should like to say a few words in defence of the Bullfinch. Mr. Boyd calls this beautiful bird the "Hun of the garden," and says he leaves a "trail of destruction in his wake." Admittedly the Bullfinch is fond of fruit buds, but those which he attacks are infested with a species of grub or maggot; it is the grub he is after, and in his efforts to get it the bud is destroyed, but not before the fructifying portion of it has been devoured by the maggot. All gardeners know that such trees as the plum, cherry, etc., which exude a gummy matter, are liable to this pest, and need well spraying, and if this were done we should hear less of the destruction erroneously attributed to birds.

Another statement in Mr. Boyd's letter which points to the fact that Bullfinches are not wholly to blame for the destruction of his fruit trees is this: he says that even a fruit tree on his manse wall had been attacked. It is well known that these birds are very shy, and but rarely approach dwelling houses even in mid-winter when food is scarce. The Bullfinch is one of the most beautiful of British birds, and it would be nothing short of a crime to "totally exterminate" the species as Mr. Boyd suggests.

JUSTICE.

Troubles of the Breeding Season.

How Ingenuity Rescued the Young Ones.

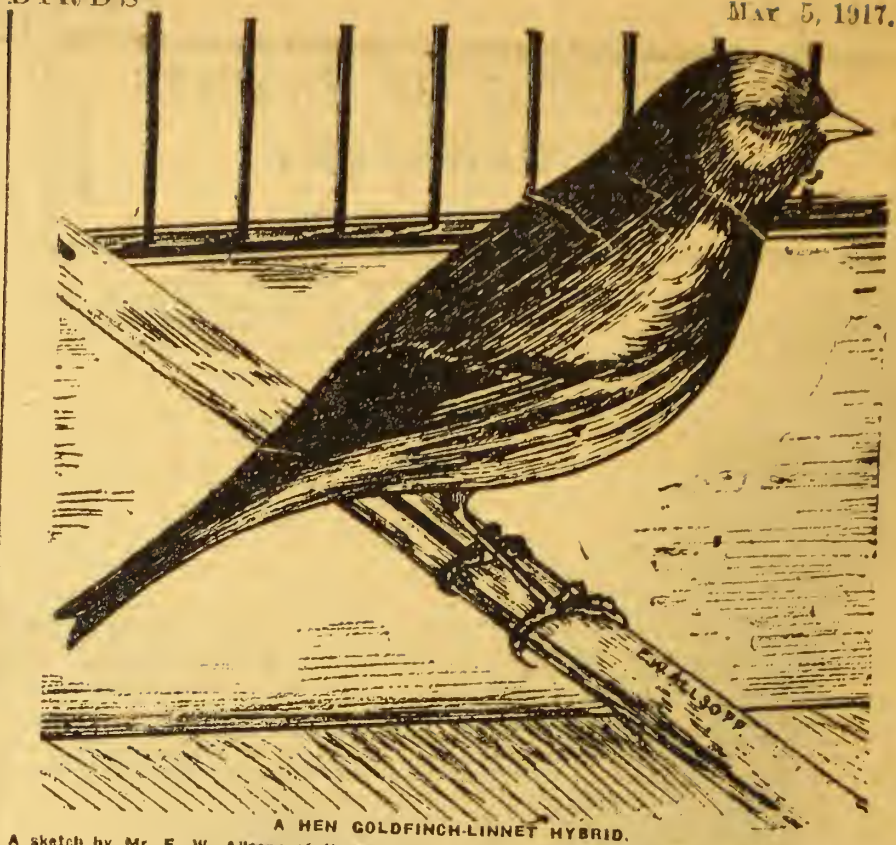
SIR,—Now that the breeding season has commenced there will be many fanciers, both beginners and old hands, troubled with hens throwing young ones into the cage bottom. I was troubled by two hens doing this; one threw a nest of four out, and the other three out of five, and all were dead when found. Someone told me to give the hens a saline bath, as sweating was the trouble. I put them again with the same cock bird, and got two more nests of three each, not forgetting to give the saline bath a try, but in a few days I got them in the bottom dead also. I was about to give them up when a friend told me to try again, and as I had time for another nest, I made another attempt.

This time I got a piece of old flannel, and tacked it to the back of the cage below the nest, bringing it out to the wire front, and about 1½ inches outside each perch. I put them in again, and had three out of four in one nest, and two out of five in the other. Things went on well for a week, when out went the young again, but this time they were alive when got on the flannel. I put them into the nest again, but they were thrown into the flannel again; this time I removed the nest, and was surprised to see both hens sitting and feeding the young in this position. I got three fine birds out of the five for my trouble, and I was satisfied, as I might have lost these also had it not been for the flannel.

Another hen I had sat that tight that she crushed the young ones out until they were stuck to the nest. It was some trouble to get a cure for this, but as necessity is the mother of invention, but I got a piece of wood three inches long, half an inch broad, and three-eighths thick, bored two holes through it, and ran two pieces of wire through so that they were level with the holes in the nest. This, when placed in the nest, is about an inch and a quarter from the bottom, and the two wires make it so that it does not shift round. I found after a time that the hen took to this, and settled down just as if it were not there at all, and the young had plenty of room to put their heads up to be fed. I took two nests of this hen, and got six young out of ten, the other four eggs were empty. I gave this hen away, as I think it was nervousness that made her sit so tight, and I don't think this can be cured in an old bird.

When getting birds ready I give a spoonful of German rape seed in the staple food, which consists of plain Canary seed. I make a mixture of equal parts maw, niger, hemp, and linseed, and give a teaspoonful of this mixture every second day to the cocks, and to the hens twice a week, also a teaspoonful of egg food to the cocks three times, and to the hens twice a week, and green food every day if possible.

A TEIER.



A HEN GOLDFINCH-LINNET HYBRID.

A sketch by Mr. E. W. Allsopp of the survivor of the three Goldfinch-Linnet Hybrids bred last year by Mr. Hurd, Cardiff. (See letter on page 236 of last week's issue.)

Bird Notes from Egypt.

A Letter from the Secretary of Brighton C.B.A.

SIR,—Visiting the Tropical Gardens at Alexandria, Egypt, last week, I was very interested in the aviaries of foreign birds there, including Weavers of all varieties, Grey and White Java Sparrows, many Waxbills, Cordon Bleus, Ribbon Finches, Paraquets of all varieties, Budgerigars, etc. Among the smaller birds there were many suitable for cage life in Blighty. Many shops in the native portion of the city around Gabbari have specimens of Canaries hanging in open cages in the doorways. Also I have noted native children walking along the desert edge with birds in a kind of trap cage, a Goldfinch and Redpoll on several occasions, early morning and returning again early evening. I am up in the canal district now, and see very little bird life, only Gulls and a few Sparrows around the camp. A pair of Sparrows are nesting in one of the huts here. I thought these birdy notes might be of interest to CAGE BIRDS readers.

PTE. WILL. H. GIBB.
Late Secretary Brighton and Hove C.B.A.

Why Members' Shows Fail.

A Supporter Says that Financial Success Should Not be the Only Object.

SIR,—I am afraid that a good many fanciers only look at the financial side of members' shows. Members' shows, in my experience, are a great success; they can be easily made to pay their way, which is more than the majority of the open shows do. We are apt to overlook the fact that members' shows are a sort of a social gathering, and when we meet a lot of the local fanciers we are able to point out to them the benefit of joining the society, and how they can at a little expense have a little flutter at the members' shows, thus preparing them for the open shows. Surely if the running of members' shows creates a real live interest amongst members, encourages the novices, and secures new members, I for one fail to see how they are failures. A well-known society (I will not mention the name, as I am not out for a free advt.) has for several years made a profit on its members' shows. At the last pair show they made £1 4s. 1d.; they charged threepence entry fee, and gave no prize money, only cards, the members gave several point specials, and points for these counted thus: if 7 entries, first 7 points, second 6, third 5, fourth 4, vhc 3, hc 2, c 1; but say in a class of four they count points backwards, i.e., fourth gets 1 point, third 2 points, second 3 points, first 4 points. This system will encourage both quality and quantity, which, after all, is what you want. If you want purely to make it a financial success the no-prize-money show will find out whether members show for sport or not. If you want to make a profit, try this method; 7d. entry fee, and give the members 75 per cent. of 6d. as prize money on the sliding scale. The odd penny will usually pay all expenses, so with the 25 per cent. and gate money you will have a fair profit. This method will do in normal times. I am up against Mr. Coe's idea of increased entry fee; the majority of fanciers are working men, and you are not going to encourage them by raising your entry fee. What with no spuds and little sugar, and hemp seed at sixpence a pound, they have enough to do to live. I fail to see Mr. Coe's argument when he says a fancier entering one bird pays 1s., and another enters six at 7d. each. The fact is this; if not, put me right. The member who enters one bird only pays sixpence for his entry, the same as a member who shows more. Again, I am afraid that the expression of Mr. Coe, "the last ditcher," won't help matters; they cannot all win first prize. Again, as to the suggestion of giving power to the judges to award vhc, hc, and c at their discretion, I am against this suggestion, for it will lead to a lot of trouble for the judge. Have none of this discretion business, but a definite fixed rule. Mr. Editor, in the footnote you pointed out the case of a judge who would have passed a bird as being a foreigner, but was instructed by the Committee to give all the cards. Did the Committee instruct the judge to award cards to birds who were not eligible to compete? What did the schedule state?

A FANCIER.

[In reply to the two questions asked we would explain that in the case to which we referred the class was for British Bullfinches, and one of these was, to say the least, of doubtful nationality. The judge would have "passed" the bird if he had not been expressly instructed to give vhc, hc, and c when there were sufficient entries.—Editor CAGE BIRDS.]

Red Mite v. Oxalic Acid.

Cleanliness the Best Preventive.

SIR,—I am pleased to give you my method of keeping down the mite, and I think there is not any need to worry with oxalic acid. When cleaning cages out I remove them from the rack, draw the trays out and scrape them. I rub the backs, sides, and front outside with a duster soaked in turpentine, dip perches in turps, and also sift all seed hoppers, which is very essential. I dust eggs with Keatings when setting a hen, and give a clean nest in 12 days.

I have known fanciers to sift the sand, etc., removed from the cages, and use the sand again. This is courting trouble, as back goes the mite. It is not economy, even in these times.

If the above system is carried out thoroughly once a week I guarantee there will not be much to worry about. Removing cages from the rack is a very important item, for that is where the trouble commences, and when you once let the mite accumulate then you have a big difficulty in outing them.

Making a Start.

A Word for the Honesty of Breeders.

Sir,—I have read a lecture in Cage Birds under the heading, "The Norwich Canary; how to breed winning specimens," given by Mr. F. J. Martin, of Battersea, before the members of the City and Suburban A.C.B. I notice that in speaking of getting a good start in breeding, Mr. Martin says, we are sometimes told to place ourselves in the hands of a reliable breeder to secure success, and describes this advice as a joke. Then he goes on to say, "Trust no one, but your own intelligence." What miserable advice! Surely any novices attending at such a lecture would fancy they had got mixed up with a batch of frauds or cheats.

But perhaps we must take the lecturer's advice as a joke. I have been breeding and selling Canaries for a few years, and have many times advised fanciers, when wanting birds, to place themselves in the hands of a reliable breeder, one who breeds his own winners. The reason I have done so I will explain, just to prove to Mr. Martin and the members of the City and Suburban Society that all breeders are not black sheep or sharks.

Some years ago I was wanting a pair of birds (Norwich), something that would breed me something fairly good. I placed myself in the hands of a fancier known to Mr. Martin, and he showed me a pair. Now I liked one of the birds very much, the other I didn't think was good enough, and I told him so. He said, "trust me," and I did, and the result was that I bred from that pair three winners out of one nest, and one of the parent birds after its adult moult won for me twenty first prizes. Then from one of the youngsters the next year I bred another three winners. That is the sort of joke that fancier played on me, and I still believe I know there are fanciers whom the novice need have no fear to trust. I should say a fancier who trusts no one must be a very miserable fancier indeed; in fact, is better out of the fancy, for that kind of fancier does the fancy more harm than good.

A Lover of a Good Norwich.

The Care of the Linnet.

Simple Rules for Keeping in Health and Song.

Sir,—As a keeper of Linnets during 20 years I hope I may claim to know a little about them. I have had hundreds through my hands and have always studied their wants. I have birds now fourteen years old still healthy and singing; they may be not so loud or so long as the young ones, but are still doing their bit.

As I am writing this letter I am listening to one of my young birds that was caught as a squeaker, as we people in Yorkshire call them, not ten yards from my own door. It is a treat to hear this bird, and up till now it has had nothing in the way of dainties, for its food has only been plain canary seed, good clean rape seed, and linseed. I find Linnets do very well on this simple mixture, although I have often read in Cage Birds different opinions with regard to their feeding. Some like to feed their birds on one sort of food and some on another, but in my opinion it is not what we like, it is what the Linnet likes which is the matter of most importance

To get a Linnet up to mark either for contest singing, mule breeding or exhibition, is an easy matter, provided the bird is healthy. The most important consideration of all, after the proper food, of course, is cleanliness, and my practice of cleaning my birds out at least twice a week does very much towards getting them steady.

Before putting the sand or sawdust at the bottom of the cage I always damp it and add a little salt. If there be an odd red mite on the bird, when the bird straightens himself up as we often see them do, Mr. Mite will drop among the salt and will rise no more. Those who adopt this method should not be afraid of the salt, for this is quite beneficial to the bird, especially at moulting time.

To those who wish to make progress with the keeping of Linnets I would advise leaving alone altogether both the forced moult and the bottle. I congratulate the Editor on not printing "Rambler's" method of forcing the moult. I have seen this in operation, and although it is a very simple matter to carry out, I have never adopted it myself, for I have seen good birds spoiled by the treatment. No one who will really speak out and tell the truth can say otherwise than that it turns the birds soft, and if they are exposed to the draught or cold it will be very seldom that they sing and keep time with one that has had a natural moult.

It is the same or worse when using the bottle. I have seen Linnets kept for certain contests, Linnets that would have won easily without any extra help, but as soon as they have had a taste of the bottle their wings have gone down, and they have started their hardest to sing their sweetest. When the time has come, however, for hanging them in the window, they have taken no notice of the competing birds, and have never opened out at all.

I have seen one particular man try this method with two different birds, both of which were naturally champions, and after three months it has not been possible to get a note out of them without previously dosing them from the bottle, and he wishes he had never known of the trick.

If anyone has a good young Linnet and would like to pit him against some of the so-called champions of England, he should first pay attention to getting the bird steady. It should be hung where people are always passing to and fro, but anything that is to be done for the bird should be done steadily so as not to startle him. When you think the bird is sufficiently steady to do himself justice, get one ounce of good dandelion seed, one ounce of white lettuce seed, two-pennyworth of turnip seed, about one ounce of maw seed, and a little lightly crushed hemp; mix all these together, and give a teaspoonful about every other day, sprinkled on the top of his food. If the bird is healthy and kept in not too small a cage, he will soon be fit for anything.

In closing I would like to let the novice know how I attend to my birds when they are moulting. Readers will remember Mr. Allen saying the better the moult the better the song, and those who pay proper attention to the bird will find this out.

As soon as I see any stray feathers, I get a piece of old muslin, fold this into double thickness, and hang it over the front of the cage. The cage is hung where it is quite clear of draughts, but not in too warm a place. Clean water is given every day, and the birds are cleaned out two or three times a week. With this treatment they come out with feathers like paint. When the birds are properly through the moult, care should especially be taken not to bring them directly into a colder place or where they may be subjected to draught. Change them a little at a time to the place where you had previously kept them, and let them be a little while in each place as you are changing them.

I hope some of those who are thinking about making a start in keeping Linnets may learn a few points from this letter.

W. Porritt.

Economic Egg Food.

The Fowl's Egg Not the Only Pebble on the Beach.

Sir,—With the breeding season usually comes a crop of queries as to some kind of soft food for the rearing of young Canaries in which the usual egg food finds no place, and there is always the very natural desire that the substitute should be "just as good." Whatever its faults or disadvantages, there can be no gainsaying the fact that the egg has virtues and value peculiar to itself, and is, in fact, the best that nature has been able to do in all the ages of evolution towards giving the young bird its first start in life. Good and serviceable substitutes certainly exist in plenty, either altogether free from egg, or with a proportion of egg used in the making and cooked in the food, many of which have been given in the columns of Cage Birds from time to time, but I should rather hesitate to accept the assertion that they are "just as good" as real egg food prepared with good fresh eggs.

But the object of this is not to deal with any of these substitutes, but to point out how very many fanciers might easily effect a considerable economy without relinquishing anything of the item of real egg itself. To take a narrow view of the question, the one essential item in the making of egg food is the new-laid egg of the domestic hen, familiar to the breakfast table, and this idea has become so stereotyped that many fanciers would even look askance at a duck's egg as a substitute for that of a fowl, unaware of the fact that for all practical purposes of this kind it is wholly immaterial whether the egg is laid by a fowl or a seagull, or even a crow for the matter of that. True, there will appear a good deal of difference in the appearance of the contents of hard-boiled eggs of different families of feathered creatures, of which the eggs of the fowl and pigeon may be taken as two distinct types. The appearance of a fowl's egg when boiled is familiar to everyone, the sulphury-yellow, varying to a reddish-yellow, yolk, surrounded by the albumen, or "white" of an opaque, milky-white colour being well known. On the other hand cut open a hard-boiled pigeon's egg, and the yellowish yolk is found to be surrounded by albumen of a colourless and almost transparent nature. Although the albumen is fairly "set" by the boiling it has none of that opaque whiteness which characterises the fowl's egg. The albumen is also of a more gelatinous nature, and does not lend itself so readily to chopping as does that of a fowl's egg. The eggs of very many of the passerine birds will be found to answer the same description as that of the pigeon.

Yet, notwithstanding this variance in the appearance of the boiled egg, the value of the yolk as a medium for rearing young birds is not affected, so far as my experiments have shown, in the least degree. Neither do they vary to any appreciable extent in the case or manner of working them up, and as the eggs will, as a rule, come very cheaply, the so-called "white" parts may reasonably be rejected. If the yolks only are used the eggs of any class of birds that are of sufficient size to be worth the trouble of preparation might be employed with every confidence, and the expenditure on eggs very considerably reduced, or even in some cases obliterated.

The eggs of common bantams, which on account of their small size are practically unmarketable, should, even in these times, come very cheaply where obtainable, and are, of course, in every respect, similar to those of larger fowls, and may be treated as such. Next in order I would place the eggs of common pigeon or doves, or fancy ones for the matter of that when the eggs are not required for sitting. These eggs, I know from practical experience, are all that could be desired for making egg food for young birds, having used them all through one season, ten years ago, exclusively for rearing good class Crests, with results that were absolutely indistinguishable from those obtained from the orthodox fowl's egg. After these I would place the eggs of ducks and such water fowl, including any of the Gull family, as may be readily obtainable in one's locality.

In country places quite a variety of eggs may be easily within the reach of even the most punctilious law-abiding citizen, as these remarks are not meant to apply to eggs protected by law from this utilitarian application. Rather, they are intended to point a way to the many who are so anxious to find in these hard times a cheap substitute for egg food which is just as good how they may effect a great economy and still retain in every particular all the advantges of the orthodox egg food.

(*Not in Competition*) Claude St. John.

In-breeding.

One Who Does Not Believe in It.

Sir,—After carefully reading Mr. Johnson's lecture which I have read very closely, like many other articles previously alluding to the same subject, I should like to give my view on the in-breeding that many of our high position fanciers practise. I have been amazed at the system, surprised to think that such a system should be tolerated, especially by our top storey breeders of great experience. With birds under control, and care for their beauty and welfare, why should we attempt to adopt what I can only describe as a cruel system? I am always uncomfortable if I know I have cousins paired up, let alone the other far closer relatives we often read of as being paired together. According to my understanding I think Mr. Johnson seems somewhat bitter against the habit, and he has my sledge hammer support. In conclusion, I hope no brother fancier will be angry with me, because I am probably only of very little consequence compared with some of our great writers, who may ignore my humble opinion of the custom. My little bird room will never have to toll that bell.

J. H. Jowett.

Practice or Theory—Which?

Sir,—Naturally anything dealing with this subject has a fascination for myself. It is now over thirty years since I first heard England's greatest amateur breeder speak on the subject. It was a lecture by Mr. G. E. Russell that first made me seriously study in-breeding, and I have been studying it ever since. Mr. Russell's lecture was based on experience. It represented practice. It gave the conclusions of a man who had proved the truth of that of which he spoke.

During the past two weeks we have had in Cage Birds the report of a lecture delivered by Mr. T. Johnson, I have read it carefully, and I have asked myself the question—What have I learned? The answer is, nothing. Why? Because it is evident that Mr. Johnson does not know, and does not understand what in-breeding really is.

Mr. Johnson has made a number of statements about myself, all of which are of a prejudiced nature. He is such a great man that he can read my thoughts and tell his fellows what I should do in certain circumstances, and puts words into my mouth, which I disclaim and disown. I certainly should not have advised Mr. Green in the superficial manner described by Mr. Johnson. I have never said that inbreeding is simply the pairing together of close relations Quite the reverse. In-breeding is a system, not an incident.

Mr. Johnson makes much assertion, but gives little proof that in-breeding is of no use. He tells us he is a believer in in-breeding. He has a funny way of showing his belief. As I read his lecture it is nothing more nor less than the skit of a cynic. It certainly was never written by a man who understands or who has practised in-breeding as a system.

I have practised and studied in-breeding with dogs, poultry, pigeons, Canaries, rabbits, and cats, and I have found what Mr. Russell told me a generation ago I should find—success. Mr. Johnson endeavours to make the readers of Cage Birds believe all my knowledge of inbreeding comes through pigeons. It does not.

Mr. Johnson has had so much to say at one time and another on this subject, both over his own name and over a nom-de-plume, that it would be well did he give your readers his qualifications for posing as a teacher. What has he done in the way of breeding and exhibiting champions, either by in-breeding or out-crossing? If he will present his credentials readers of Cage Birds will know what value to place upon his statements.

C. A. House.

Does Inbreeding Kill Wild Birds?

Sir,—I was amused by Mr. Johnson's lively lecture on in-breeding. No doubt an argument (for what it is worth) can be taken from Nature against in-breeding; but Mr. Johnson ingeniously stands that argument upon its head. When he says the departed Robins in his park have died from this complaint he forgets that we, who are restrained from in-breeding by the usages of good society, are likewise mortal.

One might say, on the contrary, that the constant movement of birds and the wide dispersal of winged seeds, etc., are natural methods for securing out-breeding.

Let him try in his park a simple experiment which I tried two years running in my wood, which is about 16 acres in extent, and perfectly undisturbed. In January I caught all the Robins at one point, about a dozen, and marked them with easily visible white celluloid rings.

Four months later all had disappeared, and had been replaced by other Robins. The same happened the following year.

Moreover, some Robins at any rate leave the country. I noticed several one October on a ship going to Australia. They got on in the neighbourhood of Southampton, did not leave when we called at Genoa and Naples, but flew away at some point between Italy and Egypt. They were fed on scraps by the sailors. A. H. Scott-

The Care of Caged Birds.

A Few Important Conditions.

Sir,—I believe most ailments of caged birds arise from improper feeding. Many people think they are illtreating their birds if they are not constantly giving them something to eat, and others imagine that a bird can eat almost anything. Overfeeding is wrong for any bird, and each particular bird must be fed on that food which is as near as possible to its native food. Mixed seeds supply in a convenient form some part of a bird's daily food, but the particular food of each bird should be its standard diet.

Dirty food should always be avoided, and when buying the food see that it is of a fine tint, large grained, and that it lies heavy on the hand. Canary seed enters largely into the seed diet of most birds, but it is best to give variety occasionally. A little hemp is always enjoyed, while millet makes an agreeable change, and for birds a little out of sorts a pinch or two of maw often works wonders. A piece of cuttlefish bone not only helps to keep the bird in condition, but offers amusement.

Clean water, gritty sand, and a little green food in spring and summer, and a sweet apple or carrot in winter, all help in maintaining the good condition of the bird. A little crushed lime can be recommended now and again for any British bird likely to be kept in confinement.

The position of the cage is all important. It must not be kept in a room continually overheated in the winter time, or where the air is allowed to get stuffy and poisonous from lack of ventilation. On the other hand, draughts must be avoided as well as dark corners. As important to a cage bird as food is light and sunshine, and every time there is a bright sunshine the bird's cage should be moved so that it gets the full benefit of it. During very hot weather though, when the cage is full in the sun, a green leaf should be fixed from the roof of the cage so that the bird can get shade if it wishes.

L. Williams.

Queries Answered

For Rules, see last week's Issue.

CANARY QUERIES

Answered by HARRIE ST. JOHN

AILING NORWICH.

D. M. A.—If there has been no physical injury, such as might occur from a slight pressure when catching the bird, or through it getting its claws fast in the wires and struggling to free itself, the condition is probably due to some internal derangement, possibly a slight effusion of blood on the brain, or, it may be, a ruptured vein in the liver or spleen. Very little can be done for these cases beyond keeping the bird as quiet and comfortable as possible so as to give Nature the best chance to remedy the mischief in her own way. As a rule, the prospects of recovery are very slight. Keep it in a fairly warm place, put a perch in the most convenient position for it, and keep in a place where it will be disturbed as little as possible, and do not attempt to hustle it about until you see it has resumed activity on its own account. Add a morsel of bread and milk sprinkled with maw seed to its diet daily for a week or so, and in the drinking water, for three consecutive days, add ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea, and afterwards 20 drops of chemical food two days in every three for a week. Should there be no improvement in a reasonable time—say, within a fortnight or so—it would be as kind a thing as anything to mercifully terminate its existence. Chloroform would be the best thing for this, and any chemist would do the job for you for a few pence.

CONSTANT MOULTING.

R. W.—Keep the bird in a fairly cosy temperature, but do not go to any extreme in overheating it; continue to supply the bath regularly, and feed and treat as follows for a month. Give a staple diet of three parts canary to one part summer rape, and in addition give separately every third day half a teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a light sprinkling of linseed and yellow mustard in the bulk. On the intervening days give first a morsel of bread the size of a hazel nut, soaked in cold milk, drained, slightly dusted with flowers of sulphur, and then sprinkled with soft sugar, and next day add to the drinking water ten drops of lemon juice and as much chlorate of potash as will cover a sixpence. Give a tender young spray of green food of any seasonable kind daily. After the first fortnight discontinue the above mixture in the water, and give instead four drops each of tincture of gentian, tincture of steel, and dilute sulphuric acid two days in every three for the rest of the month. It would also help the bird to recover if you kept in the wires, for it to peck at when it likes, for the next month or so, a little paste made by well mixing with a little warmth a teaspoonful of pure honey, ditto of cod liver oil emulsion, as much chlorate of potash as will cover a sixpence, and double this quantity of powdered grain of paradise, adding whilst mixing just enough finely powdered biscuit to bring the mass to the consistency of soft cheese. When quite cold it will set a little harder, and may be cut into cubes and stuck into the wires for the bird to peck at any time.

THREE NORWICH HENS.

A. H.—(1) As all three of the hens have, as you say, developed a serious cold since you bought them, it points strongly to the fact that in all probability it is your own management that is responsible for it. Most likely they are all kept under similar conditions, and all have consequently fallen victims to unfavourable conditions. Your first step should be to see that they are kept in a bright and healthy place, where the temperature is not too cold, but it need not be a very warm one, and see that there are no direct cold draughts nor violent fluctuations of heat and cold. Do not hang them in or very near a window, near or over burning lights in the evenings, high up near the ceiling where the air is always the most impure in the room, nor in an atmosphere exposed to irritating dust or fumes from any source. Then every second day for a fortnight, in addition to the staple seed diet, give a morsel of bread and milk the size of a hazel nut with two drops of cod liver oil emulsion on it and sprinkled with soft sugar, and on the alternate days add to the drinking water of the two hens with no bowel trouble four drops each of oxymel of squills, ipecacuanha wine, and sweet spirit of nitre. If the trouble is of only recent origin this should suffice to set matters right; but remember that the conditions under which they are kept is of more real importance than any amount of medical treatment. (2) For this bird which has the bowel trouble treat in a general way the same as above, but instead of the above medicine give first in the water six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea for three consecutive days, and then every second day for the rest of the week; then stop this and give instead six drops of dilute sulphuric acid and four of tincture of opium for two days, and after this you may go on with the same treatment as advised for the other two, and continue this for a fortnight.

FEEDING YOUNG ON SEED.

Cumro.—Your hens must be a rather abnormally disposed set if they all persist in feeding their young on hard seeds from the shell when properly supplied with egg food and other items. It might, perhaps, have helped to elucidate the cause had you given full details of each item of your food supply, and how and when you give it, but with the details at my disposal I can only give you a few general ideas to work on, and if this does not help you to get over your troubles when the next young are hatched, write again, giving the particulars mentioned, and I will do what I can to help you out of the difficulty. On the last two days before the next brood are expected to hatch out, give the pair a small teaspoonful of soft food without any egg mixed with it, such as crushed plain biscuit, or any of the foods usually sold in packets, and on the day of hatching, when the young are heard in the nest, give a little ordinary egg food and slip a bit of card down between the wires and the front of the seed hopper so that the birds will be prevented access to the seed for a few hours until the young have had a good chance of being fed with the egg food, which you should take the precaution to see is quite sweet and fresh; it may be an extra inducement to the parents to partake of the egg food if you dust it lightly over with maw seed. After the young have had a good chance of being fed you may remove the card, but strew on top of the seed a layer of crushed biscuit. Each morning and afternoon, just before the time when the hen is busy feeding up the brood for the night, repeat the same tactics of giving a little fresh egg food and a morsel of some green food and stopping access to the seed for two or three hours. Last thing at night you might stop access to the seed and give in the cage a small supply of a mixture of two parts dry, crushed biscuit, and one part cracked hemp, but do not smash up the kernel more than is unavoidable, for the parents to feed with as soon as it gets light in the morning. Continue these tactics for a week or ten days, by which time the young should be able to negotiate what seed the parents may give them. Most important of all, see that your egg food is made nice and palatable and offered in a crumbly mass, neither too dry nor too moist, and avoid above all a sticky, pappy mess.

AFTER THE CEREMONY.

One in Doubt.—(1) The birds were not quite so forward as you thought when you put them together, which is not at all to be wondered at considering the character of the season right up to that time and for some little time after. Besides this you might have been a little more generous in the dietary with every advantage to the birds. If the hen has not settled down to nesting by the time this appears, begin to give a small teaspoonful of mixed seed every second day—that is, for the pair—and on the alternate days give a similar quantity of soft food with about a third of a teaspoonful of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it, and give three or four crisp young leaves of dandelion daily. Then you will probably soon find them getting to work. I see nothing seriously wrong to cause anxiety, and think the pair need only a little patience when they will settle down all right, even if they have not done so by the time this appears. (2) You could, of course, if you really wish it, replace the cock Canary with the Linnet, but as I see no fault whatever to find with the Canary I would not advise such a course, especially as the Linnet is so wild. For the present exercise a little patience and give the Canaries a fair chance; then if you wish to try the Linnet, you may mate him with the hen Canary after she has had a first nest with the Canary.

LAYING SOFT-SHELLED EGGS.

Balbec.—The cold snaps coinciding with the period of egg-laying would undoubtedly help to increase the difficulties of the hens at this time, but I am inclined to think that the real root of the mischief lies in a weakly constitution of the hens, and the effect would certainly be greatly aggravated by the free supply of dandelion you gave them. Indeed, these particular hens appear to be in just that condition when this green food should be absolutely avoided. With the advent of more settled and warmer weather, it is just likely that the next clutches may come off in a normal manner, but if the one hen is still sitting on the nest you may do worse than try the effect of giving her either a clutch of common Canary eggs, or a clutch of some wild Finch to batch out and rear if she will, and, as you suppose, the effect may be to bring her into a more normal breeding condition. Otherwise, treat her, as well as the other, as follows, and note how the next clutches come off. In addition to the staple diet, give a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with soft sugar every third day for a fortnight—the cocks may also be allowed to share in the treatment—and on the intervening days give first a small teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a slight sprinkling of linseed in the bulk, and next add 20 drops of Chemical Food to the water. Give a morsel of chickweed or the flowering tips of groundsel daily, but entirely avoid dandelion. When nesting next time, about a week before they are expected to lay, add a teaspoonful of lime water to the drinker every second day; keep supplied with cuttlefish and strew a little smashed old mortar, slightly sprinkled with common salt before smashing, on the floor of the cages.

SEED SAMPLES.

Canary.—The canary in packet marked No. 1 is of very fair size, clean, nicely ripened, and of just good quality; nothing superlative, but not to be grumbled at these times. No. 2 is also clean and ripe, but very small in size, and has a slightly doubtful flavour. I should class it as very moderate quality, distinctly inferior to No. 1. The rape is a trifle strong, but on the whole is a very fair quality of summer rape, and the same remark applies as to No. 1 canary. The hemp is a trifle stale, but is well preserved and still quite sound and of good serviceable quality.

PULLING NEST TO PIECES.

Freddy.—You omit to say whether you removed the eggs as laid, and if you did whether you replaced the first with a nest egg, and this might account partly for the behaviour of the hen; but on the whole I am inclined to think that she is not yet in a good normal breeding condition. On the other hand she may quite possibly be one of those touchy specimens which will brook no interference with her nesting arrangements, and thus showed her resentment at having the eggs removed. If she has not completed a full clutch this time, nor commenced to sit in the ordinary course, take away all nesting material for a week or so, when you may again return her a moderate supply if you see she is anxious to begin nesting again. Meantime, do not be too generous with the egg food—a small teaspoonful between her and her mate, every third day, and a similar quantity of mixed seeds about as often, will suffice—and give a fair supply of green food daily of any of the usual kinds that are seasonable, except dandelion, but avoid the latter altogether for this hen. Then let her go to nest in the ordinary course and do not interfere with her arrangements at all, not even to remove the eggs as laid. Leave her entirely to her own designs, unless she should make quite too clumsy a nest for the safety of the eggs, in which case wait until the evening of the day following that on which she lays the last egg of her clutch, by which time she should have become fairly broody, and you may venture to make what adjustment of the nest seems quite necessary. The eggs she has already laid might have been placed under some other hen commencing to sit had you had one available.

HOW TO FEED.

J. A. Morris.—What the vendor probably meant is that the birds were properly matched to make a pair, as they are usually spoken of as being paired when put together in the breeding cage. As regards the feeding when young are hatched, seeing that you are quite a tyro, I could not advise you better than to get our manager to send you a copy of the handbook, "Canary Breeding for Beginners," which he would be pleased to do for 7d., post free. Meantime, if any young are hatched in addition to the staple diet of canary seed, or canary and summer rape, as the case may be, give a small teaspoonful of egg food made or equal parts yolk of hard-boiled egg finely chopped, and either bread crumbs or crushed plain biscuit as soon as you can hear the young are out. After this a supply of this soft food regularly at least twice each day—morning and afternoon gradually reducing the proportion of egg yolk until by the time the young are five to six days old it will consist of one part egg to two parts bread or biscuit, as the case may be. See that it is always freshly prepared each time and the egg pan in which it is given washed clean each time fresh is given, and never mix stale leavings with the fresh supply. On the fourth day after hatching give a morsel of green food, freshly gathered if possible, at mid-day, and after this give a supply according to the demands of the young on the parents each morning and afternoon, but do not give it in sufficiently large quantities at one time that it becomes stale or gets dragged about the cage floor. Aim at so regulating the quantity of both egg food and greenstuff given at one time that it will be all cleared up just before the next supply is due. When the young are eight days old a large teaspoonful of lightly cracked hemp may be added to the dietary daily, and if there is a large brood a similar quantity of soaked summer rape added at a fortnight old will help the parents in the task of catering for them. You would find full details of any events that may arise in the little handbook recommended.

MOULT AND PAIRING.

Blackfriars.—(1) There is no reason why the cock which has just got over a spring moult should not be in fit condition for mating in two or three weeks hence, provided, of course, he is healthy and vigorous otherwise; but you could scarcely expect him to be in a condition to start breeding with at once. To help to tone him up a little faster, give a morsel of bread and milk with two drops of cod liver oil emulsion on it and sprinkled with soft sugar every second day for a week or so, and on the alternate days add to the drinking water six drops of tincture of gentian and three of tincture of steel for the same length of time. You may venture to mate him as soon as he appears quite fine and tight in plumage and resumes his song. (2) This query is quite too vague to allow of any definite reply. You simply say that one green Yorkshire hen and a Norwich will not pair together. As you could scarcely expect two hens to pair together, I can only surmise that the Norwich is a cock; but even so, you should have given some particulars as to the age and condition of the birds to enable me to form any definite idea as to the reason of them not mating. I can only suggest that you give the two birds a teaspoonful of egg food with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it between them every second day for a week or so, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a sprinkling of yellow mustard seed in the bulk, and give also a small stool of crisp young dandelion daily. If this does not speed them up a bit within the next fortnight or so, please write again and give fuller particulars about the birds and how you have treated them hitherto.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

FEEDING A BRAMBLEFINCH.

Betty.—The Bramblefinch is closely related to the Chaffinch, and should be fed in a similar manner. As a staple food give the following: four parts of each of canary and teazle, one part of each of summer rape, charlock, and linseed, and the equal of one part of sunflower seed may be offered either separately or mixed with the stock food. I prefer to give it separately, as it prevents waste; some birds get so fond of it that they scatter the other seeds to pick it out. A little hemp and maw seed can be given weekly. The Bramblefinch should have some live food, say, one or two mealworms every day, or other insects, many of which can be gathered in the garden, such as small smooth caterpillars, grubs, flies, spiders, greenfly, and later on, gentles, earwigs, wasp grubs, etc. A little green food should be offered, although they are not particularly keen about it, but will sometimes nibble a spray of chickweed, shepherd's purse, or watercress. The bird is very fond of radish, turnip, and rape, that have just commenced to sprout, and if you have two or three shallow vessels with a little seed in them just covered with water, they sprout in a few days, and a constant supply may be obtained.

BREEDING LINNET MULES.

A. E. L.—Linnet Mules are not particularly difficult to breed, although some fanciers never appear to produce any, while others can breed them almost like Sparrows. The simplest way is with the cock Linnet and hen Canary. It is an advantage to have a house-moulted Linnet, although a young field-moulted bird will generally mate if he is fairly steady and properly managed. Almost any hen Canary will do, if the object is only to breed songsters; if exhibition birds are wanted, a large Norwich hen is required. Put the birds in cages near each other, or in the separate compartment of a double breeder, so that they may get used to each other before pairing up properly. When the hen seems particularly lively, and carrying bits of material about, you can put the birds together, and in a day or two put in a nest-box or pan, and plenty of moss and cow-hair. If they agree well together the cock can be left in during incubation. (2) Mules and Hybrids are not considered to be fertile.

AILING RUSSIAN BULLFINCH.

E. Hurter.—Your bird must be at least four or five years old, and I should say has already lived beyond the average of those big foreigners. The treatment I would advise is a small dose of sulphate of soda in the drinking water, twice a week for, say, three weeks; mix 10 grains in four tablespoonsful of water. Continue the same seed mixture, and feed liberally on wild food, of which you can now collect plenty; dandelion leaves, chickweed, groundsel, and others are coming along fast. You can also give him sprays of budding fruit trees, particularly currants, also some from the hedgerows. Offer apple and banana, and other fruits as soon as they come into season. On the days you are not giving the medicine squeeze a few drops of lemon juice in the drinking water. Hang him outside for an hour or so, when the sun shines, and don't forget his bath.

THRUSH NOT DOING WELL.

Beginner.—When a big bird like a Thrush is not doing well, a change of food frequently improves matters. Hemp is certainly not a suitable food for a softbill, and you should discontinue it at once. Get some best quality chicken meal and add to it a spoonful of meat meal and one of ants' eggs, pour on it a little hot water or milk, and feed him with the mixture, giving your usual Thrush food occasionally for a change. In addition, offer him little scraps of boiled meat, pudding or vegetables from the table, and he should also have some kind of insect food, say, two or three mealworms, or anything you can collect from the garden. Let him bathe on fine bright days. This change should have the desired effect. Have you our Nutshell Booklet on the Thrush?

TROUBLE WITH GOLDFINCH.

Scotch Goldie.—I am afraid you are feeding your bird too heavily, and I would advise the following alteration in his staple food: Teazle 4 parts, canary 3 parts, hemp 1 part, rape and linseed ½ part of each. Give a few sunflowers daily, and twice a week a spoonful of good wild seed, which you can procure in packets. Be liberal just now with wild food, particularly roots, leaves, and seed heads of dandelion. Give at once an aperient of salts, as much as will cover a sixpence, in his drinking water. If the eye appears at all inflamed, bathe it carefully with warm water, to which has been added half a spoonful of boric acid powder; rub the powder into a paste before adding the water. He should have a rather larger cage if you can manage it for him.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

PROCURING A WHITE JAVA SPARROW.

J. A. B.—It is against our rules to recommend any special dealer, and we can only suggest an advert. in our columns, unless you find what you require therein. A visit to your local dealer might, however, procure you one.

BLUE-WINGED LOVEBIRDS.

P. Afra.—(1) Yes, a mixture of canary seed, millet and oats would make a satisfactory food, plus green food, grit, cuttlebone and water. (2) Yes, either a barrel or log will answer as a nest receptacle. (3) Bark is not absolutely necessary as a nesting material, as they will use leaves, stems of millet sprays and the like—any kind of thin bark will do, the birds will cut it up to suit their requirements.

FEATHER PULLING.

Constant Reader.—Cease giving the bacon rind. Supply ripe fruit daily, sweet apple is very wholesome. Keep a tin of canary and white millet (equal parts of each, mixed) in the cage. A good sized chunk of wood, a piece of a thick branch, placed at such an angle that it can climb and cling to it, will be more beneficial than smaller pieces. Put one teaspoonful of fluid magnesia into the drinking water every fourth day, and on the other days lightly colour the water with chemical food. Use a little Jeyes' Fluid in the bath water. Now the warm weather appears to have arrived let it have plenty of open air treatment, but do not subject it to cold winds or draughts. All the items of dietary you mention can still be given except the bacon rind. Keep it as interested as you can, and if it is tame enough, being out of its cage for short intervals will help it. While many cases of feather pulling must certainly arise from improper treatment, very many others have their origin in ennui; therefore keep it interested and amused.

AMAZON ILL FOR SIX MONTHS.

C. Counter.—I am afraid you are applying for help too late; still the bird must be a fairly strong one to have lasted in this state for six months, so the case is not hopeless. Get a box of honey and borax, and put a little on its tongue twice daily, or it can be given thinly spread on bread, biscuit or plain cake, if the bird will eat either of these. Spray the nostrils daily with a dilute solution of glyco-thymoline (tepid). Put one teaspoonful of fluid magnesia in the drinking water every fourth day, and on the other days well colour the water with chemical food. In addition to seed mixture supply ripe fruit, raw carrot occasionally, shelled walnuts, and biscuits. Grit, cuttlebone and a chunk of wood for mandible exercise should be continually in the cage. If the bird will allow you to handle it, bathe the swollen eye with a tepid, dilute, rose water and zinc eye solution. I think your bird would do better on the following seed mixture: One quart each best canary seed, white oats, hemp, sunflower, safflower, and shelled pea-nuts—well mix, and keep in a dust-tight receptacle in a dry place. It must not have anything moistened in either tea, coffee or milk. As it is accustomed to moistened bread, prepare this as follows—thinly spread the bread with cod-liver oil emulsion, sprinkle with sugar, and then drop over it sufficient hot water to make the bread just moist. Shall be interested to hear how the bird progresses.

WHAT BIRD?

R. Bamber.—The bird in question was an Orange-flanked Parrakeet, specimens of which can be purchased finger-tame, present value about 50s.

OUTDOOR AVIARY.

D. A.—Your suggested arrangement should give good results. Put up plenty of twiggy branches as perches, both in the shed and wired flight. The concrete base to flight will answer well enough if it has a slope sufficient to drain off any moisture from driving rain, etc., to the outside. Put up husks, rush nests and nest boxes, both in the shelter and flight. I suggest boxes of growing grass along the front of flight, and heaps of sand in sheltered corners of flight and shed. Put in a window or windows in the shed sufficient to make it quite light; all glass must be covered with small mesh netting on the inside. (1) I suggest pairs each of Magpie and Bronze Manakins, Zebra, Bib, and Grey Singing Finches, Avadavats, Silverbills, and Bengalese. I cannot advise the inclusion of any Parrakeets, the risk would be too great in a comparatively small aviary. (2) Yes, but Chinese Quail would be the better, as the ordinary migratory Quails bang about a good deal in limited quarters; it would be the better to keep one wing cut so as to check rapid flight in such an aviary. (3) Cockaticls would disturb if they did no injury to the small birds. (4) I think you might put in a Red-crested Grey Cardinal, but allow the small birds to get quite at home in the aviary before doing so. A couple of privet bushes growing in small tubs would improve the appearance of the aviary and be enjoyed by the birds, if they got nearly leafless they could be brought out periodically to recuperate and renew their foliage.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

(Continued from page 244.)

NO time for breeding. Large green Crest-bred cock, dark crest hen, wing marked hen; prize birds; 5 Norwich hens and 2 Border hens, songsters; what offers?: Carpenter, 103a, Bovell-rd., Forest-hill, S.E.23. (940)

EXCHANGE gent's heavy silver English lever watch, guaranteed perfect order, value £3, for good pair Norwich Canaries; also gent's wrist watch, value £1, for good Norwich hen: Thomas, 10, Ardrigh-road, Dublin. (945)

BARGAIN. One cock, even marked, circular crested, yellow body, 24/-; 1 crested yellow hen, 7/6, breeding condition, good feeder, and Goldfinch Mule, pure finch notes, 9/-; exchange Rollers or Yorkshires; offers: Mr. Smith, 9, Helvetia-st., Perryhill, Catford, London, 6. (940)

Mainly British.

TWO nice cock Goldfinches and hen Bullfinch for first nice Yorkshire hen: T. Morris, Church-st., Athlone. (944)

SELL or exchange, singing cage, 5/-; hen Goldfinch Mule, 2/-; breeding cage, 2/6: Ellis, 42, Eastover, Bridgwater. (938)

GRAND cock Chaffinches, 1/6 each, carriage paid; or exchange hen Canaries: Evans, Church-street, Littledean, Glos. (940)

APPROVAL, Deposit; H.M. Goldfinch, sweet singer, 5/-; handsome cage, 2/6; offers: Knight, Robert-st., Rushden. (944)

EXCHANGE a very fine aviary moulted cock Bullfinch; wanted, Canaries or Foreign, offers; no rubbish offered or wanted: Gay, Woodgate, Quinton, Birmingham. (941)

WHAT offer in Canaries or cash for ticket of silver English lever (Benson's), in going order; pledge, 15/-, 23rd April, 1917: Mrs. Davidson, 27, Amoy-st., Southampton. (940)

THRUSH cage, span top, 2ft. high, 6/6, exchange two Yorks, show cages, muling Goldie, or young Norwich hen; yours first; no rubbish: Pinkney, 30, Hanson-st., Redcar. (939)

GENUINE cock Goldfinch, paired with pink eye Norwich hen; exchange for Linnet Mule; must be pure Linnet song, or Norwich cock; yours first: R. Gulless, 99, Ridsdale-rd., Anerley, S.E.20. (944)

COCK Bullfinch, steady, singing, 4/-; exchange hen Norwich Canary, four cock Chaffinches, singing stout, slightly cage soiled, 1/6 each; exchange lot for Norwich hens: Elliott, Amport, Andover, Hants.

EXCHANGE or sell; one Hawfinch, one Bramblefinch, and one Chaffinch, all cocks; Roller or Yorkshire cock wanted to the value of 18/-, or anything useful: Price, 422, Castleford-rd., Normanton, Yorkshire. (942)

WANTED Nightingale, Blackcap, Redstart, exchange gent's umbrella; record, "Abide with me," "Lost Chord," contralto; and cash to 5/-; fine Black-headed Bunting, sale or exchange: Pearce, 94, Exchange-rd., Bridgford, Nottingham. (940)

EXCHANGE, cocks, Bramblefinch, Chaffinch, Redpoll, Linnet, hand-reared Greenfinch; hens, Chaffinch, Redpoll, Linnet, Siskin, for cock Hawfinch, Goldfinch, or Siskin, or sell 12/-: Millington, 18, Fox-st., Dawdon, Seaham Harbour. (938)

EXCHANGE some of the best Linnets in the world for Rollers, sell 5/- to £1: also two others, £5 and £6: these two will sing any other two in the world; Crest cock, exchange 2 Roller hens, sell 12/6: James Norburn, 47, Station-rd., Worsbrodale, nr. Barnsley.

CONTEST singing cock Linnet, 5/-; grand massive breeding yellow Greenfinch cock, 2/6; exhibition Bullfinch cock, 5/-; big muling cock Goldfinch, great blaze, etc., full song, 10/-; breeding hen Bullfinch, 5/-; carriage paid: Thomas, 10, Ardrigh-road, Dublin. (944)

LINNETS, Greenfinches, Bramblefinches, Skylarks, Robins, Yellow Buntings, Reed Buntings, 1/6 pair; 12 mixed, aviary seed birds, 4/-; Blackbirds, Song Thrushes, Missel Thrushes, any above selected for show or song, 2/6 each; cock Yellow Wagtails, Winchats, Wheatears, 3/- each; carriage 6d.: Fenn and Son, Bowers-lane, Isleham, Cambs. (939)

TWO monster cock Greenfinches, sure mulers, 3/6 each; two good Redpolls, one H.-M., 3/- each; cheap; large steady Bramble, good colour, 3/-; two steady Linnets, lovely songsters, 5/- each; will exchange lot for good exhibition Siskin or young Norwich or Roller hens; also good Roller cock, bred this season, 20/-, and good singing Greenie Mule, 7/6; cheap; approval; stamp reply: Smith, 18, Forster-st., Hunslet, Leeds. (940)

Miscellaneous.

CONCERT flute, nickel-silver keys, grand tone, 10/6; offers: F. Chadwick, Tool Dealer, Wrexham.

NICKEL-silver wristlet watch, new, good goer, 8/6, exchange house-moulted cock Goldfinch or Norwich hen: W. Mitchelhill, Longtown, Cumberland. (940)

PRAM, light drab colour, as good as new, with white canopy, £3; or exchange for Canaries; cost double: Crossman, 9, Hampton-st., Northampton.

WHAT offers in birds for Edison Standard Phonograph, large brass horn, stand, 50 records in case, sell £2 5s.: 216, Mina-rd., Bristol. (940)

GENT.'S boots, sevens, 6/6; violin music, 1/6; pair razors, 3/-; 60 "Cage Bird" plates; exchange, offers: Clark, 71, Windmill-st., St. Peterhead. (944)

EXCHANGE 3-compartment, 2-compartment breeders, etc., also pair gent.'s boots, 9s, for 2 cock Canaries, full song; offers: Malone, 69, Jarrow-rd., Jarrow. (944)

SALE or exchange; first class 4-chambered revolver in plush case, for one pair of good quality Yorkshires: Wickens, Morris's Bakery, Southwick, near Brighton. (938)

NO. 1 Milita Air Gun, 12/6; silver curh albert, 7/6; or exchange for White Wyandotte and Leghorn chicks, or ducklings: Travis, Bungalow, Rivington, Horwich, Lancashire. (940)

GRAMOPHONE and 20 records, machine new two months ago, a grand instrument, £2 10s., cost £5; offers songsters, Parrot, British or Foreign, or useful exchange: F. Chadwick, Tool Dealer, Wrexham.

WHAT offers in British Hardbills for pure Wyandotte Bantams, hatched April 1917, cash 7/-; also three pullets, laying, and cockerel, 1916; cash 10/-: Painter, Newbald, East Yorkshire.

NEW pony's saddle, backband, shaft tugs, reins, breeching straps, leather collar, 20/- lot, worth double; exchange Canaries, gent's suit: Ryder, 65, Osnaburgh-st., Regent's Park, London. (924)

EXCHANGE Edison Standard machine, records, brass horn, for chicks, Canaries, young rabbits, perfect condition, or sell £2; two Goldfinch Mules, 12/- each, or exchange Canaries, cocks or hens; also 50 new double-side records, 1916, Winner and Regals, etc., 1/- each: Trott, 124, Summer-lane, Birmingham.

WILL give good value in boots, clothing, bedding, cutlery, etc., or household goods of any description required, in exchange for birds, Parrots, Poultry, Puppies, etc., or livestock of any variety: Livestock Exchange Stores, 61, Mount-st., Chorlton-upon-Medlock, Manchester. (933)

Aquarium.

FROGS, toads, spawn, newts, beetles, dragon fly larvae, valsneria; trout 6/- dozen: De Von, 114, Bethnal Green-rd., London. (923)

BITTERLING, Dogfish, Sticklebacks, Newts, Frogs, Beetles, Dragonfly, Larvæ, Snails, weeds, and all requisites for the aquarium; list free; catalogue of Aquaria and Vivaria, 1d.: L. Cura and Son, Bath Court, Warner-st., London, E.C.1. (903)

Ferrets.

SPLENDID ferrets, good workers guaranteed, 6/-, carriage paid: Wann op, Short-st., Carlisle. (925)

Kennel—Dogs for Sale. Dogs for Exchange.

WHIPPET-Greyhound pup 5 months, exchange for poultry, or sell 30/-: T. Snowdon, High-st., Helmsley, Yorks. (936)

TWO Game Bull-Airedale dog puppies, seven weeks, 8/6 each; bitch 6/-; carriage paid; parents tackle anything: Roder, 35, Woolwich-rd., Charlton. (945)

BRINDLEY crossbreed Great Dane dog, good watch and quiet, weigh about 70 pounds; sell 25/-, or exchange anything: Walter Cox, 23, Colley-lane, Cradley. (940)

LARGEST and best selection of healthy dogs and pups in England on sale; no fancy prices asked: State wants to Standard Kennels, Newton Heath, Manchester. (944)

DOGS and puppies of all varieties bought, sold, or exchanged, no fancy prices, sporting dogs, guards, pets, and companions: Princess Kennels, 21, Brook-st., Manchester. (933)

FOR sale, Greyhound bitch, 22ins. high, will work long nets, ferrets, and kill rabbits on own ground; will accept £2, or exchange for Rollers or Goldfinch Mules, on approval: Hayes, 17, Church-st., Briton Ferry, Glam. (940)

HANDSOME crossed Pomeranian Schipperke dog, 10 months, sharp, clean, house guard, companion, resembles miniature fox, living picture for lady, kind home essential, 12/6; carriage paid: Mrs. Wright, Jasmine Cottage, Selston, Notts. (941)

Household Furniture, Utensils, etc.

PEACH'S CURTAINS. Direct from Looms. Free Book. Practical hints for Curtain Treatment. Curtains that last. Makers' prices. If buying new LACE, MUSLIN, or CASEMENT CURTAINS, LINENS, send for this interesting Book. It will prove valuable. WRITE NOW for the New Book: Saml. Peach and Sons, 150, The Looms, Nottingham.

LADIES!

WOOD'S CHALLENGE REMEDY

is guaranteed under the sum of £100 to cure when others fail. Far superior to Pills, Pellets, or any Continental treatment. For all cases of irregularities, however obstinate, CHALLENGE REMEDY is supreme. Price, 3/-, 5/-. Special, 12/-. Stamp for Advice. Est. 30 years.—**MR. & MRS. A. K. WOOD, Medical Specialists, 20, Louis St., Leeds.**

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by G. E. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 6/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 6/4 post free.

TWO BONNY NORWICH HENS.

The charming Norwich Canary Hen at the bottom of the picture won, as an unflighted bird in 1915, 1st Prizes at Burton-on-Trent and Birmingham, and in 1916 took seconds at Coventry and Gateshead Shows. It is the property of Mr. E. Godley, Rishton, near Blackburn. The other is the Yellow Hen which took 1st Prize at Birmingham Show for its owner, Mr. T. Roby, Rainhill. This very typical hen has only once been shown, and will doubtless add many more prizes to her record.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

Mr. John Robson writes: "Those desirous of using open rings I have no hesitation in saying they have no equal." "Cage Birds": Exceptionally good and well made, of quite ideal form, can be put on by anyone with absolutely no trouble or risk": Hughes, 120, Burton's-rd., Hampton Hill, Middlesex. (869)

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

FRED ALLEN, BRITISH BIRD CHAMPION.

The largest stock in the North. Everybody welcome. Gentlemen, if you want good value and satisfaction, give me a trial order. I have the finest strain of singing Linnets in the world, moreover, I have won hundreds of prizes and judged thousands of birds. **I WILL GIVE A CHEQUE VALUE £1,000** if I fail to produce a Linnet to sing five notes making 14 turns, any time of the day or night. There is not a man in the world can teach you more about Linnets than your humble servant. I have a grand lot of Linnets on quality song, and all learnt under my undefeated cup winner, **2/6, 3/6, 4/6** each, and a few extra long running birds, **5/6** each. I have a very nice Linnet, singing lovely, with cage, suitable for teaching young Mules or Canaries, only **5/6** lot; good loud free singing Linnets, **2/-, 3/-** each; monsters, right for muling, **2/6, 3/6** each; housemoulted prize-winners, **8/6, 10/6, 12/6, 15/6, 20/-** each. Please note, I do not offer any fierce singing Linnets at 2/6, etc., it is merely a catch. I have some of the proudest singing Linnets in the world—a visit will prove my statement. 18 beautiful cock Hawfinches, with deep bibs, etc., **10/6, 15/6, 20/-**; monster yellow cock Greenfinches, the real type, **2/6, 3/6** each; cock Chaffinches, like paint, **1/6, 2/-, 2/6**; cock Bramblefinches, **2/-, 2/6** each; cock Thrushes, on nice song, **3/6, 4/6, 5/6** each. Cock Linnet and Canary, ready to nest, **7/6**; cock Greenfinch and Canary, building, **7/6** pair. I have the finest stock of

TALKING PARROTS

ever seen, real African Greys, with red tails, talking and whistling, a treat to hear, and not half dead—all I have are on seed and water, **£3, £4**; and a few extra free talkers, **£5**; also one of the best in a cage, **£7**. Brilliant Blue-fronted Amazons, all chattering and talking, real pets, **40/-, 45/-, 50/-**; extra good talkers, **£3, £4**; and one an extraordinary good talker, **£5**. Young Greens, **10/6** each. Please note, I do not offer common Rocks, they are dear at a gift. I have 200 small foreign birds to clear: Green Singing Finches, on full song, **7/6** each; Cutthroats, **7/6** pair; Bronzewing Manakins, **7/6** pair; Whydahs, **9/-** pair; Orange-cheek Waxbills, beauties, **8/-** pair; Rock Mynah, **35/-**; Avadavats, **7/6** pair. Write at once; all on approval. Travelling boxes, 3d.; cost of carriage 6d. extra.

FRED ALLEN, England's Leading Specialist,
156, PORTER STREET AVIARIES, HULL.

Club Reports.

MANCHESTER & N. COUNTIES.

General meeting, April 30, Deansgate Hotel, and lecture by Mr. Chittenden, of Bradford. It was very interesting to hear his forty years' experience with the Yorkshire Canary. He touched on all points from the rearing to the show bench, and made remarks regarding stock pairs. It was a lecture with something for the older nuts to crack, as well as interesting to the novice. At next meeting, Deansgate Hotel, May 14, at 8, we are to have a lecture by Mr. Cutmore, of the Liverpool Free Public Museum. Hoping members will turn up early, as well as any other fancier who would like to spend an evening with us. Election of judges for Nest Feather show after lecture.—J. Green, Hon. Sec.

SOUTH SHIELDS (Always Ready).

Meeting, April 18, Hunt's Shop, Ocean Road. Mr. J. S. Dixon presided over a good attendance. A vote of sympathy was passed with the relatives and friends of the late Lt.-Col. Hunt, all members present responding in the usual manner. New members elected: W. R. Pickering, C. Baker, S. Moses, M. Richardson, B. Quigley, S. Lindsay. We have engaged Mr. A. Holden, of Gateshead, to judge the Y.B. show. Mr. J. Johnson, of Wallsend, has offered to come down in the near future to give us a lecture on the "Breeding and rearing of young birds." Fanciers wishing to join please forward their names to me.—J. W. Watson, 75, Leighton Street, South Shields.

BIRMINGHAM ROLLER C.C.

Meeting, April 18, Crown Hotel, Hill Street. Mr. Pimm presided over a good attendance. The following were elected members: Messrs. Thomson, Kirby, Jacquemin, Harrison, Westwood, and Miss W. Hayward. In last month's report the name of Williams in the new members should read as Willows. Decided to hold our first show on Nov. 28 and 29, and the second on Jan. 2 and 3. After business we had an interesting half-hour. Questions were asked and answered. Next meeting, May 16. Mr. J. Humphries of Darlaston will give a lecture on "Breeding Rollers, etc." Members please note alteration of time to allow Mr. Humphries to start at 8.—W. Taylor, Hon. Sec.

ACCRINGTON C.B.S.

Meeting, May 2, Crown Hotel. Mr. Harwood presided over a good attendance. After general business, the classification for F.F. show, June 23, was considered, and it was resolved to have two sections, and that members having won three 1sts at members' show compete in the first section. Resolved that we have in each section four classes for Norwich, two Yorkshires, two Cinnamons, one A.V. Canary or Mule, and one British or Foreign class. Sec. to ask Mr. Braybrook to judge. The time for staging exhibits and question of prize money to be decided at next meeting. Sec. will be glad to hear from local fanciers who wish to become members.—Wm. Parkinson, Sec., 13, Cedar Street, Accrington.

BLAENAVON C.B.S.

Meeting, May 3, Crown Hotel, Mr. E. Gilbert chair, and a fair turn-up; but we should like to see all at next meeting. The members were sorry to hear that C. S. Latham is leaving the district, and they wish him every success in his new position at Ebbw Vale. We hope the fanciers of that town will give him every welcome. Decided to leave date of N.F. show until next meeting, as the breeding results of members are poor up to the present. Carried, that prize money for same be: 1st, 2s. 6d.; 2nd, 1s. 6d.; 3rd, 1s.; also 3s. spl. for most points and 2s. second most points in each section. Classes: Nor. 2, Yorks 2, Bord. 3, Mules 1, Brit. 1 Sec. read a letter from L.-Cpl. J. C. Daniels, who is serving in France, who sent an order for 5s. for spl. for best young bird in show. The Sec. was instructed to write thanking him for same. Decided that Sec. write Mr. J. Robson to know if he would judge the open show Oct. 31, and if so, to engage him. Also to notify CAGE BIRDS of same and fill up the guarantee form. A few questions asked and discussed brought a good meeting to a close.—C. A. Broome, Hon. Sec.

MIDLAND ROLLER C.C.

Meeting, April 30, Seven Stars, St. John Street, Wolverhampton, Mr. Willows presiding over a good attendance. New members elected: Messrs. Chatwin, Dimmock, Lockley, Perks, Harrison, Newins, Taylor, Hough, Wykes, Tomkins, Davis, making a total of 64 new members this year. A special committee was held April 16, to discuss new scheme for the Ring competition 1917 and 1918. It was decided to elect two delegates from each club (unfederated) to meet together to confer upon show dates and judges for the forthcoming show season. Secs. of Roller clubs elected in turn, and the conference to be held at the headquarters of the club of the sec. holding office for that year. Members present had the pleasure of listening to an excellent paper given by Mr. Rhodes, touching on all the various stages, from mating, methods of feeding, when and how to ring the young, until young birds are able to look after themselves. Many questions were asked, and were ably answered by the lecturer. Several members also brought a few birds, the tours being explained by Mr. Bird. Next meeting, May 28, a paper will be given by Mr. Twigg. Roller clubs wishing to be represented at the forthcoming confereuce, please communicate with J. W. Thomson, 9, Gorsehrook Road, Wolverhampton.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

AUDLEY ROLLER C.C.

Meeting, Mr. Aldridge's Room, Church Street, May 5, Mr. D. Scott chair. Decided to support the amended Rule 6 as proposed by the Haslingden R.C.C., and also to support the song standard as issued by the Leeds R.C.C. Also decided to use only Fed. rings for this season.—A. Dean, Hon. Sec.

HORNSEY AND WOOD GREEN.

Meeting, headquarters, May 2. Mr. J. Robson gave his lecture on Hybrid Breeding, which proved very instructive, especially to members who are enthusiastic in the Hybrid department. The lecturer impressed upon us the great value attached to procuring as much wild food as possible for the pairs, and therein lay a great secret towards success. Questions were asked by Messrs. Waldock, Griffin, James, Twilley, and Dr. Huggins. A vote of thanks was accorded the lecturer, and the meeting closed.—O. G. Martin, Hon. Sec.

BIRKENHEAD B.B.A.

Meeting, May 4, with a good attendance. The business was selection of judges and printing matter. We have fixed Nov. 17 for our old show, in the Co-operative Hall. New members made, R. Jones, J. Lyall, W. A. Barr. Mr. W. Jones gave his lecture on "How to Feed and Wean Young Canaries." This was an exceptionally good lecture, and full of merit, Mr. Jones speaking for half an hour, after which we had a discussion. His lecture pleased all, and those who follow the advice given will be more than repaid.—H. Wakem.

BARROW C.B.A.

Special meeting, May 5, Mr. S. Smith presiding over a good turn-out, and an amount of business was done of great benefit to the building-up of our society, which is fast becoming one of the largest in England. As our Hon. Sec., Mr. T. Croft, has resigned his position, the duties in future will be taken up by D. McFarlane and M. Tranter as joint secs., 26, Lord Robert Street, Vickerstown, Barrow-in-Furness, to whom all future correspondence must be addressed. A vote of thanks was given to our retiring sec. for his services during his term of office. Mr. C. Roberts kindly gave a rose bowl for best novice Border at our coming Nest Feather show.—D. McFarlane and Tranter.

SOUTHAMPTON C.B.S.

Meeting, May 2, Mr. W. G. Fellows chair. Preliminary arrangements made for F.F. show, July 4: Mr. G. T. Webb to be asked to judge, show to be held at Kingsland Hall, if available. New member elected, Mr. W. Chairett. A table show of British, etc., was then held; the entry was not large. The award for best in show went to Mr. H. J. Vale's Bullfinch, a fine specimen, good colour and grand condition. A judging competition was held and closely contested, Mr. H. J. Vale proving the winner. Mr. W. G. Fellows judged. Goldf.: 1, Alderslade and Clark; 2, Vale. Bullf.: 1, Vale; 2, Alderslade and Clark. Linnet: 1, 3, Vale; 2, Blann. Green. or Chaff.: 1. 3, Vale; 2, vhc, Alderslade and Clark. Siskin, Etc.: 1, Alderslade and Clark. A.O Hardbill: 1, Alderslade and Clark. Dark Mule: 1, Blann. For.: 1, 2, 3, vhc, Slade.—G. J. Slade, Hon. Sec.

NEWCASTLE C.B.S.

Meeting, May 3, Mr. T. C. Crawhall chair. A letter of condolence had been sent by the Sec. to one of our members, Mr. H. Bird, on behalf of the society, on account of the death of his wife, who passed away after a painful illness. She will be much missed by him amongst the birds, as she was a great help and took much interest in them. Mr. Bird wisbes to thank all members for their kindness towards him during his trouble. New members elected, Messrs. J. Wright, T. Taylor, and J. Iveson, and we have still room for more. All members should attend next meeting, as we are to decide if our show has to be run on the same lines as last year (for charity), so it is up to all to attend or not grumble afterwards. We were all disappointed in not hearing Mr. Maddison give his lecture; he was not well, suffering from a bad throat, but will give it later. Some discussion took place on the lecture which appeared in CAGE BIRDS, given by Mr. T. Johnson, on "Inbreeding." One of the members present had only introduced one fresh Canary into his strain for the last twenty years, and he produces winners every year, so this is one good vote for inbreeding.—F. W. Laidlow.

CLAPHAM C.B.A.

Meeting, Clock House Hotel, Clapham, May 1. As the Dulwich and Peckham C.B.A. hold meetings on same evenings as ours,, the first Tuesday in each month, and as this was thought to be prejudicial to the interests of both associations, Sec. was instructed to approach the Sec. of the Dulwich club with a view to removing this difficulty. Mr. A. J. Clarke, who was to give an address upon Yorkshires, said that in view of the shortness of time at his disposal, and of the absence of fanciers interested in Yorkshire Canaries, it would be better to deal with one or two points of interest to fanciers of all varieties, rather than read his lecture, and he hoped those points might form the basis of profitable discussion. Mr. Clarke dealt first with egg-binding, which he thought was caused by cold. He strongly depreeated the common remedy of steaming the vent, which he thought too drastic for such a fragile creature as a Canary, as well as being a very dangerous one in the hands of a novice. The lecturer explained that all his birds were kept outside, and that when he saw symptoms of egg-binding he at once brought the patient into a warm room, and gave it warm water with four drops of tincture of gentian in it. This was absolutely all he did, and he had always found it an effective remedy. Mr. Clarke then dealt with the problem of dead in shell, of which he said he had made a special study. He said he was absolutely convinced that the cause of this bugbear was lack of moisture, and he always hung the bath on the cage after the hen had sat for eight days. He instanced the fact that few wild birds have unfertilo eggs or dead in shell, and attributed the latter largely to the moisture which always gets to wild birds' nests. In the discussion which followed, several other interesting opinions were revealed. Mr. Clarke said he always gave the bath when the young were three days old, and was of opinion that the consequent vapour from the hen's body helped the young to feather more quickly and accelerated their general development. He did not approve of limiting the hen to a diet of plain canary seed while she was sitting, as he considered sitting "hard work" for the hen, and he therefore gave mixed seed and egg food throughout the period of incubation. Mr. Clarke was accorded a hearty vote of thanks at the conclusion of the meeting. Most of his friends know that he has lately had the misfortune to lose almost the whole of his splendid stock of Yorkshire Canaries, and it speaks well for his enthusiasm and pluck that he can be so interested in the hobby as to give such a splendid address. It was decided to discuss at our next meeting the advisability of an annual outing, and we shall have at the meeting the pleasure of an address upon Hybrids by our worthy chairman, Mr. W. H. Vale.—A. R. Cox.

GOUROCK C.B.A.

Meeting, April 21, Gamble Institute, Mr. J. Allison presiding over a good attendance. It was arranged to hold monthly meetings at present every third Saturday in the month. Four new members were admitted. Judges for the show, Nov. 3, at the Gamble Institute, are: Mr. P. McQuiston (Ayr), British; Mr. B. H. Livingstone (Rutherglen), Canaries. Mr. Livingstone will give a lecture at next meeting, May 19, on the Norwich Canary. Any fanciers in the district now wishing to join might forward their names to me.—D. Rollo, Sec., 15, Bath Street.

ARDWICK & MANCHESTER C.B.A

General meeting, May 1, St. Thomas Schools, Ardwick. Reports were given on the finding of a suitable room to hold our next open show. After a long discussion we decided that if possible we would keep within our own area, and have now engaged the Co-operative Hall, Downing Street, Ardwick. The Nest Feather show business was dealt with, fixing up almost the same classification as last year, there being three sections in Canaries. Open, amateur, and novice. Next meeting we will arrange all special prizes. The judge is Mr. A. G. Davis (Manchester).—J. Spencer.

HASLINGDEN ROLLER CLUB.

Meeting, May 1, Victoria Hotel, Mr. W. F. Thacker (President) in the chair. After a considerable amount of correspondence relating to our proposition re Rule 6 of the Fed. had been read, a vote was taken, and it proved unanimous in favour of the proposition being placed in lieu of the present Rule 6; also there was a discussion in regard to applying to the B.R.C.C. for rings in the event of something not being done in the matter immediately by the Federation, as some of the members are left in the dark with regard to the ringing of their young birds for the coming show season. A record attendance is requested for the next meeting, June 5, when the Sec. hopes to have some special business. New members wishing to join our club please forward their names.—H. Nuttall, 37, Sulton Street, Accrington.

SHEFFIELD O.S.

Meeting, May 1, Headquarters, Mr. T. Dawn chair. Mr. S. Dean (Bradford) gave a very interesting lecture on "In-breeding," and based his remarks on practical experience. He pointed out that your stock must be sound to start with, and the birds you select ought to be ideal specimens if possible. If your birds were slightly wanting in some points it was no detriment, if their ancestors had no weakness of a similar character. He had mated father to daughter satisfactorily, and had no objection to brother and sister. To illustrate his belief that inbreeding produced typical show specimens, he submitted pedigrees of animals showing that "cracks" had often been produced in such a manner, especially among dogs and horses. His discourse was listened to very attentively, and he was besieged with questions, which were answered in a satisfactory manner. He created quite an impression on his audience, and made converts. A hearty vote of thanks was accorded the lecturer, to which he suitably replied. The Chairman reminded the meeting not to forget the ramble, June 3, when he hoped to see all members and their friends. Weather permitting, he would endeavour to make similar arrangements to last year.—E. C. Job, Secy.

EAST ARDSLEY C.B.S.

Table show and meeting April 28. It was brought to our notice that Mr. T. H. Alexander was going into business, and a unanimous vote was given him wishing him success in his new business. Mr. W. Waind judged, and gave every satisfaction. Class 1 (6): 1, 4, D. Bedford; 2, 3, hc, Walton; vhc, Kendrew. Class 2: 1, 2, A. Bedford; 3, D. Bedford; 4, Kendrew. Class 3: 1, 2, 3, A. Bedford; 4, Kendrew; vhc, Walton.—A. Walton.

GLASGOW & W. COUNTIES CLUB

Meeting and show of British Finches, May 5. Mr. W. Dinwoodie presided over a good attendance, and in a neat little speech welcomed an old club mate in the person of Tommy Renfrew, now a "Tommy" with the New Zealand contingent in France, but at present on furlough. The President had still another duty to perform, viz., that of expressing the club's deepest sympathy with Mr. Peter Pettigrew on the loss of his second son, Alexander, who was recently killed on active service, this being Mr. Pettigrew's second loss, the youngest, James, having met with a similar fate at the hand of the Hun several months ago. The minutes of the informal meeting held on Saturday, April 14, were rescinded. The Sec. and late Treas. were granted gratuities of £1 and 10s. respectively. The Sec. not considering it adequate for the work done, resigned his position, and it was ultimately agreed that Sec. and Treas. be paid officials at the salary of £2 and £1. New members elected: Messrs. J. Clark, Douglas, J. Robertson, A. Wright, A. Hay, W. Dow, A. Abrahams. Agreed that a Yorkshire judge be secured for annual show. A ramble was arranged for May 19 to Bridge of Weir. Train leaves St. Enoch's station at 3.5. Members and friends to meet at corner of Dunlop and Argyle Streets at 2.45. Members will be postcarded for same. Judges nominated for annual show, and will be elected at next meeting, June 2. Classes for next monthly show, June 2; Bramble, Chaffinch, Bullf., Cock Bunting, A.V., British, A.O.V., Light Mule or Hybrid, Dark Goldf. or Linnet Mules, Mules A.O.V. Messrs. W. Brown, J. Findlay, and Macfarlane judged table show: Greenf.: 1, Trotter; 2, Marr; 3, Robertson; 4, Wright; 5, spl, Jas. McGowan. Lesser Redpoll: 1, Marr; 2, Johnstone; 3, Trotter; 4, spl, D. Dinwoodie; 5, Bannerman. Twite: 1, Trotter. Mealy: 1, Trotter; 2, Adam.—J. H. Adam, Sec.

LEEDS ROLLER C.C.

Meeting, May 5, Griffin Hotel, Mr. E. Peel chair, and a good attendance. Decided to hold our annual show on the usual dates, Nov. 9-10, and to approach the following gentlemen to officiate as judges: Mr. Roebuck (Wakefield), Mr. Wareing (Bury), and Mr. Walton (Leeds). Rule 6 was again before the members, and after considerable discussion it was unanimously resolved to vote for the Haslingden resolution. The feeling of the meeting was that now there appears to be a settlement of this question, all the Federation clubs should do their utmost to make this our first year as big a success as possible. Members elected: Messrs. Long, Fenton, Palfrey, Hemingway, Woodhall, Barnett, Mellor, Crossley, Bolton, Davy, Withers, Lockwood, Norwood, Vernon, Fowler, Sissons, Shackleton, Windsor. Will intending members let me have their names before the new rule books are printed?—H.

The Treecreeper.

By W. LIDGETT, Hon. Sec. Newark C.B.S.

WHILE out for a short cycle run, which entailed business as well as pleasure, the other Sunday, I had the good fortune to see a Treecreeper, for the first time, I believe, in my life, in its wild state, and this only five miles from my home at Newark.

Whenever I am on a country road, and time permits of a walk to study bird life, I get off the bike, and enjoy my fill of nature. It was while thus engaged watching a flock of Starlings chasing each other about in a corn field that my attention was attracted to a bird running up the trunk of a tree. I watched it carefully for some time, standing where I was quite still. Then my curiosity getting the better of my discretion, I dropped my bike gently and went a little nearer.

The bird evidently saw me at this moment, and made a short flight to another tree about fifteen yards further along the lane. I thought I had missed a birdy treat, but as soon as I saw its destination, I moved very cautiously a little nearer, and was successful in getting a good view of the bird hunting up and down the tree for food. It crawled head downwards down the trunk, poking its beak in crevices of the bark, and it seemed as if it worked its tail as a sort of a hold on the trunk as well as its feet.

It was a long time before I could make up my mind what bird it was. At first I thought it was a Woodpecker, but on throwing back my mind to the colouring I knew it could not be, and then I thought it must be a Treecreeper. Anyone who is a keen ornithologist can well guess my delight at seeing this somewhat rare bird; it is rare in this district I well know, for I keep a strict eye on all I see when out, and do not ever remember seeing one before.

Its movements were lightning like; it was up one side and round a short way, and then worked down again, seeming always to be eating. Whether it found food every time it poked its beak in a crevice or not I was unable to see, as I dare not go too near a second time, for I did not wish to risk it getting out of my sight again if I could avoid it. Just as I was having my fill of this interesting bit of bird life, hoot! hoot! up came a motor cycle, and while I was looking to keep clear of it I missed my feathered friend, and failed to see where he went. Anyhow I had had another treat in nature, and was satisfied to think I had seen something new. There is nothing to my mind can touch bird life, whether it be wild or caged birds, and if I had to devote my attention to nothing else all my life, I should think I was a lucky fellow indeed.

THE STUDY OF BIRD MIGRATION.

How Aeroplanes May Aid in Solving Some Mysteries.

In the course of an article headed "Secrets of the Air," the "Irish Times" says: "Photography has revealed much to us in recent years concerning the habits of birds in their nests and feeding-places, but we have been unable hitherto to follow them into the air and to pierce the mystery of their vast migrations from continent to continent. Most of our knowledge of this subject is derived from the marking of young birds, from birds that have come to rest on ships in mid ocean, and from the bodies of those that have dashed themselves against the lamps of lighthouses. We have a great deal to learn about such matters as the velocity of the various species in full migration, their formations in the air, and their various levels of flight. A time may come when keen naturalists, flying in aeroplanes of greater swiftness and staying power than any now used in our armies, will be able to take minute records of all these things—will be able, perhaps, to act as historians of some annual migration from its start in England to its end in Siberia or Central Africa."

"PIGEONS"

The only paper dealing solely with Show, Table and High-flying Pigeons.
Coloured Plates a Special Feature.
Every Friday 2d. Send P.C. for specimen.

"FUR & FEATHER"

The Rabbit, Cat and Cavy Paper.
The only Paper devoted to these subjects.
Every Friday 1d. Send Postcard for Specimen.

Offices: Idle, Bradford, Yorks

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

England.

Nov. 1.—**Blaenavon C.B.S.**—(Geo. Broome, 82, King St.)

Nov. 3-5.—**Leicester Hand-in-Hand C.B.S.**—(E. H. Hulse, 23, Hartington Rd.) J.R., C.H.

Nov. 9-10.—**Ardwick and Manchester C.B.S.**—(A. E. Thorpe, 28, Park Grove, Levenshulme.) J.R., H.W.B., J.B.

Nov. 14.—**Coventry O.S.**—(J. Kent, 91, Villiers St., Stoke, Coventry.)

Dec. 7-8.—**Barrow C.B.A.**—(D. McFarlane and M. Franter, 26, Lord Roberts St., Vickerstown, Barrow-in-Furness.) J.R., H.W.B., J.B., J.M.

Wales.

Oct. 27.—**Landore Plasmore C.B.S.**—(H. Fry, 22, Plasmarl Terrace, Plasmarl, Swansea.)

Nov. 15.—**Swansea C.B.A.**—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

Nov. 21.—**Maesteg C.B.S.**—(C. Williams, 247, Bridgend Rd.)

Dec. 5.—**Nantymoel, Ogmore Vale and Dist C.B.S.**—(T. Davis, 29, Clifton House, Oakfield Terrace, Nantymoel, Glam.).

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds

and Bird World.

A Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, FLEET STREET, *London, E.C.4.*
Telegrams—"Aviculture, Fleet, London."
Tel. No. 5229 *Holborn.*

The Editor is always glad to receive and consider suitable contributions, whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on **one side** of paper only, must be authenticated with the proper name and address of the sender, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Mr. T. Johnson, Southport, is judging at Leigh C.B.S. show, July 28.

Mr. J. Nicholson, Maryport, Cumberland, writes that he has removed from John St., to 6, Ellenborough Place.

Mr. T. H. Alexander, secretary of Wakefield O.S., writes that he has changed his address from Regent Street to 104, Kirkgate, Wakefield, where he has opened a bird business.

No monthly meetings of the Richmond (Surrey) C.B.S., writes Mr. C. Parmiter, hon. sec., will be held until July 28, the date fixed for our young bird show; schedules will be duly forwarded.

The dance arranged for May 4 by the Sacriston F.F. and C.B.S., writes Mr. R. J. Scorer, hon. sec., was not the success which was anticipated, as there was considerable opposition, and when expenses were paid there was nothing near the amount left which was required to pay off liabilities. I cannot, therefore, square up just yet, but with the help of the committee and members I will do my utmost to pay all claims. About £12 has to be found, and I expect all members and intending members to rally round and swell the list. Will all those who are waiting for their claims to be settled please accept this statement as from the committee. I thank all those who have written wishing future success to the club.

The May issue of "British Birds," Messrs. Witherby and Co., 326, High Holborn, 1s. monthly, completes Vol. 10, and contains a full index to the past twelve issues. The very valuable notes by Mr. H. F. Witherby on the moults of the British Passeres, and notes on the sequence of their plumages are resumed, and the present section covers the Flycatchers, Chiffchaffs, and Warblers. (Parts of these we are privileged to reproduce, and they appear on page 259). In the opening article Mr. Eric B. Dunlop shows that sometimes Rooks are polygamous, and gives some instances which have come under his own observation. The usual interesting "Notes" and correspondence make up a nice issue. The opening of a new volume with the June issue offers an opportunity for student of British birds who are not yet subscribers to become readers of this very useful magazine.

We have just had word from a local fancier at Ayr, that a well known Scottish fancier, Mr. Wm. Conkie, has been wounded at the big advance, south of Arras, on April 23. He now is in Stourbridge in hospital progressing favourably, and sincerely hopes to meet all his "birdy" friends at forthcoming shows.

Country Rambles.

On May 5, the field section of the National British Bird and Mule Club rambled from Ickenham via Uxbridge Common to Denham. The party, which included Messrs. Trower, Crabb, Pretty, and several others, left Baker Street station at 2.3, and a very interesting afternoon was spent. Bird life, however, was not so plentiful as was to be expected, and perhaps the cold wind which prevailed during the late afternoon caused many birds to take cover. About 30 species were seen and noted. On Sunday, May 13, the ramble will be from Harold Wood to Havering-atte-Bowe. Train leaves Liverpool Street at 10.42. All friends and fanciers are welcome to join the party, and should provide themselves with a light lunch. On May 17, Thursday, the ramble will be from South Mimms to Shenley. Motor-bus from Golder's Green at 2.15; from Charing Cross about 1.45. Gentlemen desiring to join the Whitsuntide ramble through the New Forest, leaving London on the Saturday afternoon, should please send their names a week before to Mr. T. R. Trower, hon. treas., 442, Caledonian Road, London, N.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

IN the issue of CAGE BIRDS dated April 14, I dealt with that useful little plant popularly called chickweed, but known to the botanist as "Stellaria media," and I referred then to certain other species of closely related plants also called chickweed, which differ much in appearance and character from the common variety, but are nevertheless of considerable utility to all keepers of seed-eating cage birds.

The sudden advent of summer's climate has not only brought the migrants upon us in unusually rapid succession, but has also at last hastened on the unduly retarded wild flowers of the field and hedgerow, and on all sides now one is meeting with rapidly developing plants of the little mouse-ear chickweeds, so often overlooked even by country dwellers, on account of their rather inelegant appearance and diminutive size.

Mouse-ear Chickweed.

Modern botanical science recognises about eighteen different kinds of mouse-ear chickweed, all of which are grouped under the generic name of "Cerastium," but an enumeration of these in CAGE BIRDS would be, to most readers, both unnecessary and wearisome, and I therefore propose to confine my remarks to those species which are most commonly used by fanciers, and which are to be found in plenty in fields and dry places all over the country.

The general appearance of these weeds may be seen from the drawing on this page. It should be noted that the plants are usually conspicuously hairy, both on stems and leaves, and that the latter in size, shape, and hairiness so closely resemble the ears of a mouse as to have suggested the popular name for these useful little herbs.

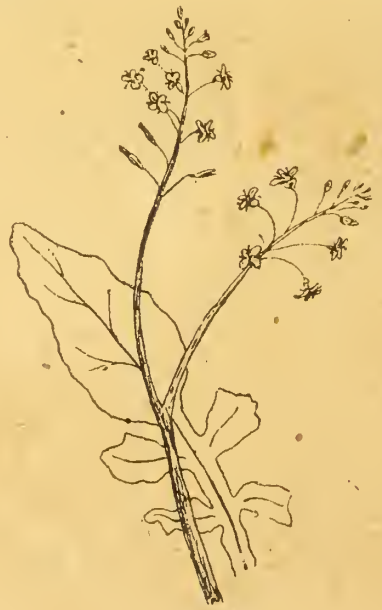
The two most abundant species are known as the narrow leaved and broad leaved mouse-ear chickweed respectively (Cerastium triviale Link and Cerastium viscosum L.). They are very similar in general appearance, and both agree in having tiny, inconspicuous, white flowers, each with five deeply divided petals, and closely resembling those of the common chickweed already referred to.

After the fall of the flowers, however, the difference is considerable, for the little capsules which hold the seeds in "Cerastium" quickly lengthen out, and assume a characteristically curved shape, which renders them quite conspicuous. These are of a tough and horny texture, and later on will burst open at the summit with ten sharply pointed teeth, and so allow of the escape of the seeds on the lightest touch.

Although of no value as a green food, and possessing, so far as I know, no special medicinal virtues, the mouse-ear varieties of chickweed are of great dietetic value in their seeding stages, and not only all the British seed-eaters, but Canaries and others too will greedily devour the abundant seeds of these useful little plants. The seeds will be found on comparison to be not nearly so large as those of the common chickweed, but to bear a much closer resemblance, both in size and colour, to those of the shepherd's purse.

The common wintercress (Barbarea vulgaris Br.) is not yet, I believe, actually in flower, though it quite probably will be by the time these words appear. I do not know that anyone ever uses it in its green state as a food for cage birds, but I draw attention to it thus early because it is much more easily identified at this season than at any other, and is not nearly so widely known as it deserves to be.

The plant when mature reaches a height of about eighteen inches or two feet, and has stout angular stems which bear smooth, shining, dark green leaves, which low down upon the plant are usually of the shape shown in the sketch, but higher up the stem become more or less egg-shaped, and have toothed edges.



Wintercress.

The small flowers are arranged in clusters or racemes, each one consists of four bright yellow petals, and those who have sufficient patience will be able to count four long, and two short, stamens in the interior.

A similar arrangement is to be found in the shepherd's purse, already dealt with in these notes, and is characteristic of members of this useful cabbage family, comprising no less than 1,200 species, not a single one of which possesses any poisonous properties.

Soon after the flowers have fallen, the tiny green seed-pods begin to elongate, and quickly reach a length of an inch or so, being straight, stiff, four-angled, and tapering to a point. The seeds are very numerous, and as the plant abounds on hedge-banks and by water sides, large quantities will soon be available. They contain a high percentage of nitrogenous and oily matter, and the whole plant is famed for its beneficial effects upon the blood.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed, "The Editor, CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

"Sauce for the Goose."

I read, says a writer in the "Western Daily Press," that the Humanitarian League has been raising a very strong protest against the proposed campaign against Sparrows. Could not the Food Controller obtain a list of the members of this League, and deduct from their bread rations the quantity of grain that goes to keep these birds alive? Which is of the most use to the country, a family of half a dozen thriving romping boys, or a thousand Sparrows? Where does the "humanity" come in keeping Sparrows alive and depriving these half-dozen "national investments" of their legitimate food? I know not; perhaps because I am a farmer, and have a youngster or two of my own.

The Return of the Nightingale.

I have not noticed in your columns, or elsewhere, says Mr. H. Lucy in a letter to "The Times," notification, common at this time of the year, of the return of the Nightingale. Punctually at break of day I have for fully a week heard this bird singing in a garden overlooking the Channel, situate in a locality which, lest I should convey information useful to the enemy, I will distantly allude to as "somewhere on the south coast." The melodious notes always have a plaintive undertone. Just now, probably subtly influenced by the carnage going on day and night across the water, I find in them a distinctly deeper sadness.

[Mr. Lucy is evidently one of the few bird-lovers who do not read CAGE BIRDS.—Ed.]

The Cat Thought It Out.

The most expert Sparrow catcher I ever knew, says a correspondent to the "Boston Guardian," was the cat domiciled in my home when I was a boy. She was very fond of stalking birds of every description, but seldom managed to secure a victim, at any rate, whilst I was watching her, for the birds generally managed to elude her when she sprang upon them, though sometimes they lost a few feathers. She was, however, very successful in catching Sparrows by another method. A large number of these birds roosted in holes in the thatch of a building, across the entrance of which was a large gate. Up this gate at dusk, when the birds had settled down for the night, pussy would stealthily climb, and standing on the top bar would calmly thrust a paw into one of the holes and pull out one of the wretched little inhabitants, and, quietly descending, proceed to make a meal of it. And yet there are some people who assert that animals have no reasoning faculties.

OBITUARY.

Mr. WM. HART (Paisley).

It is with deep regret, writes Mr. A. M. Baird that I inform you of the death of Mr. William Hart, Paisley. He passed peacefully away on April 27, and was buried on May 1. Mr. Hart was one of the old brigade of Scotch Fancy breeders, and about 25 years ago he was right in the forefront of the winners, gaining leading honours at all the principal shows in the country. He was of a genial nature, and was highly respected in the fancy. Failing health caused him to give up the birds some years ago, although he was up till his death honorary president of the Scotch Fancy National Derby, a position he had filled since the society was started 20 years ago. Amongst the mourners who followed his remains to the grave were Messrs. Robert Wright, Greenock, Alex. Baird, John Kelly, and Arthur M. Baird, Paisley. I am sure the sympathy of all Scotch Fancy and other breeders, of whom not a few knew Mr. Hart, will be extended to his family of sons and daughters in their sad bereavement.

A Pretty Wood Picture.

In one of his inimitable despatches to the "Daily Telegraph," Mr. Phillip Gibbs writes: "So all through the night the battle of guns went on, and the sky was filled with the rush and tumult of shells, and the moon veiled his face from this horror, which made a hell on earth. But in a small wood a Nightingale sang through it all. It was a little wood in the curve of a crescent of the guns, and every shell-flash lit it up with a white light, so that the delicate tracery of the boughs and branches was ruffled, and its tiny green leaves were tremulous. And in the heart of that thicket the Nightingale sang with little trills and flutters of song, trying to reach richer notes, to rise higher in an ecstatic outpouring, then warbling little snatches of melody. It was the old song of love, old as the beauty of the world, holding in its tune a thousand centuries of spring-time and all the joy and love of youth in its mating. We listened very silent and held our breath, and wished for things that have been taken from us by devilry."

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

Egg Foods and Egg Substitutes.

By F. COLE (East Dulwich).

In the following lecture, given before the members of the Plumstead and Woolwich C.B.S., and the City and Suburban A.C.B., Mr. Cole shows how to economise on the food bill, and how hard-boiled egg may either be dispensed with altogether, or used in much smaller proportion than is generally deemed necessary.

WE are at the present time pairing our birds, and while we are asking ourselves, "What will the harvest be?" I think it behoves us seriously to consider the question of their food supply. For many years eggs in a hard-boiled state have been by many considered the most important ingredient for the rearing of young birds. This has doubtless been arrived at from the fact that they are a very concentrated food, and also probably bearing in mind that the yolk of egg contained in the shell with the chick forms its first meal.

Two General Misconceptions.

I think, however, if this last point be seriously considered we must admit that there is considerable difference between a fowl's egg hard boiled and the fresh yolk which has formed the pillow or bed upon which the chick has formed, and which has ultimately been used as its first meal. To suggest that they are even in a degree similar to my mind requires a fertile imagination, while to insist that the most concentrated food is best for the young chick is contrary to my experience.

By way of comparison it might be suggested that if you and I were to live on meat essence, tabloid vegetables, and other foods we should so conserve our digestive machinery that we should live for ever, whereas we know it would have a contrary effect. We have all read many times that for the first few days of a young bird's life it should be fed on pure yolk of egg. This, I have no hesitation in saying, is not only quite unnecessary, but is at the present time a wicked waste. If eggs must be used, every particle should be used up, and if the stock cannot do this then it is better to use some other food as a substitute.

Now some of you have had as long an experience as I have, and I am sure at times you have found a hen feeding on seed from the first day. I have several times found birds hatched and fed before I had given any soft food, yet without any ill effect. It is also well known that for the first day or two the food supplied to the young is in liquid form. The hen has no difficulty in converting seed into this state in a very short time, which to my mind is evidence that soft food is unnecessary. Whether it is expedient is another question.

Seed the Natural Food.

I have noticed my chicks sometimes, when about four days old, with whole canary seed in their crops. Of course, the yellow husk has been removed, but the brown inner skin of the seed has been plainly visible through the bird's skin at the neck. Now if this whole seed is watched it will have disappeared into the body in a few hours, and in a short time longer will have passed from the bird in a semi-liquid form. I say semi-liquid, because we know that the excreta is contained in a thin covering, or, as it were, skin, so as to enable the old bird to pick it up without dirtying the nest. It will only be necessary to remind you that the chick has itself digested that whole canary seed to convince you that the young chick has already a powerful digestive system.

I know seed reared chicks are sometimes badly nourished; so are egg food chicks, and it is quite likely that those seed reared chicks would have been just as badly nourished if they had been fed on, to our own minds, the most perfect foods. I would remind you of the nests of wild birds you have examined, of the healthy youngsters with their ever-ready mouths for food of any kind. I know how you have longed for your own pampered pets to look so well, and how you have envied that wild hen her bonny chicks.

"Natural environment," did some one say? Yes, my friend, it is; unchecked by man's vain endeavour to make Nature toe his line, to conform to his imperfect knowledge, and abide by his foolish whims and fancies. What is food for one may well be poison for the other, you say, but methinks it were well for us to get back to where we strayed from Nature's path.

Now the natural food consists of wild seed and fruits, vegetable or green food, and insects or meat food. Egg food as we understand it has no place at all.

We have no difficulty in providing seed in normal times, and we cannot go far wrong if we use as the principal seeds canary, rape, and hemp. Canary may be termed the bread of life for our pets. Rape, given either dry or soaked until it begins to germinate, or even boiled for a short while, forms an excellent food to assist in the rearing of our birds. Hemp is a food our birds are very partial to, and, given a good sample, some hens will feed on this almost exclusively.

For vegetable or green food we must be controlled by the place in which we live. If in the country we have access to chickweed, dandelion, shepherd's purse, green plantain stalks, all of which should take precedence over watercress or lettuce, which are almost the only foods the town man can supply.

The Value of Wild Seeds.

Some years ago I remember going into the room of a well-known breeder, and I was much struck with the quantity of chickweed in his cages. There was a good handful in each cage, which he had supplied every day fresh. It was well seeded, and, to show how much his birds appreciated it, they had even woven the driest parts into the nest itself. The birds were in an excellent condition, and the chicks were a sight to remember, which clearly demonstrated to me the need to feed on a natural food where possible.

In the supply of meat we have a more serious question to deal with. We cannot supply insects, and our Canaries, through our continued neglect, have ceased in a large measure to crave for them. They have not, however, quite lost the taste, as is evidenced by the delight a hen seems to get from nibbling the end of a partially formed feather she has plucked from the wing or tail of one of her own offspring.

This is to us a very annoying practice, but I submit it is a fault we ourselves are largely responsible for. It may to a large extent be prevented by supplying a small piece of suet or bacon fat with the rind attached for the birds to peek at, and we know that some fanciers recommend a piece of oven-dried liver or lean beef well grated up and mixed with the soft food.

The fault (I mean the plucking of the young) is a very serious one, and should receive our earnest attention; it is hardly necessary for me to remind you that you have never found it in any species of wild bird life. It is most unnatural, and is to my mind largely accounted for by our continued supply of the egg diet. The bird's system has become over-heated, and it has turned to the fresh juice and oil contained in the immature quill to supply a want we have encouraged to exist.

It will be gathered from what I have already said that I am no believer in the all-egg diet. I have used eggs as a food for many years, both for rearing and moulting, and the longer I do so the more I am convinced they are not absolutely necessary. If an egg be used in conjunction with a sufficient quantity of bisenit meal I do not think much harm will accrue, but a benefit may be obtained. It is from the fact that only small quantities of meal are used that the danger arises. An ordinary fowl's egg as used by me is added to to such an extent that it will give between 30 and 40 teaspoons of food. This is for rearing young birds (not colour feeding), and would be sufficient egg food for eight or ten pairs feeding healthy broods, and when compared with the pure yolk recommended by some would form an inexpensive food.

Chicken Meal a Cheap Substitute.

I have also been experimenting recently with chicken meal as a food for Canaries, and have been quite pleased with it. When soaked in warm water the birds eat it readily. I can assure you there is no need to take the seed off either, and when one considers what it is made of one is not surprised at their apparent enjoyment of it. The brand selected by me is made by Spratts, Ltd., and, of course, the principal ingredient is a biscuit meal. The food also contains seeds, wheat, oatmeal, maize, grit, and other ingredients, all broken up so that a small chicken could readily swallow them. It also contains a percentage of cod liver oil and also meat fibrine. Now none of these foods would harm a wild bird, and all would be readily accepted by the parent finch.

The conclusion I have therefore arrived at is that no harm can accrue to our stock by making a reasonable use of such a mixture. In fact, leaving out green food, this chicken meal forms a more natural food for the rearing of young Canaries than a hard-boiled egg does. I shall certainly use it in a moistened condition during the season as a change of diet, but I think that young birds being weaned on to seed should have it put through a mill first, so as to more thoroughly incorporate the ingredients and make it more easily picked up.

By way of comparison I have prepared several foods, and produce them for your inspection in order that those of you who care to experiment with them may have the opportunity to inspect them, and that they may be more readily discussed this evening.

No. 1 sample is composed of Spratt's chicken meal mixed at the rate of one dessertspoon of meal to 1½ spoons of warm water. This food, as I have said, consists of biscuit or flour, seeds, grit, oil and meat, and may be given as it is to adult birds. That they appreciate it will be seen by their quickly clearing the whole of it from the egg drawer and by the cock bird readily feeding his hen with it. I would suggest from this last fact that it is clearly evident that the birds would also readily feed their young with it, and it therefore forms a very cheap means of rearing.

The cost at the present time is a trifle less than 4d. a lb. in its dry state, and when we consider that its weight is more than three times increased by the mere addition of water we can appreciate the great saving at a time when food of all kinds is costly. Apart from the rearing of young, if this food be used as a substitute for canary seed two or three times a week a great saving of seed will be made.

Sample No. 2 is made of the same meal, but ground up as before stated, and egg added. The meal is used dry at the rate of four dessertspoons to four spoons of water and one egg, and the quantity obtained is about 40 teaspoons. When one considers that five or six spoonfuls are sufficient soft food for the rearing of a healthy brood for a day, allowing the cock and hen a fair proportion for themselves, the cost is small.

No. 3 is made from Spratt's Canary food in the proportion of four dessertspoons of dry food and four of water to one egg. I have reared a great number of chicks on this diet, and, except that it contains no meat or oil, I have no objection to it combined with the canary rape and hemp diet. It has the advantage of being cheap, the meal costing about 4½d. a lb. I have used this food, but without any egg, as a medium for colour-feeding birds, and have found it much more convenient than the usual egg preparation. The birds eat it readily, and the colour mixes freely in the food by the addition of water. The colour of the birds is, in my opinion, also as good.

(To be continued.)

HOW BRITISH BIRDS CHANGE THEIR PLUMAGE.

(Continued from page 789, Dec. 30 issue).

We are indebted to Mr. H. F. Witherby, the Editor of "British Birds," for permission to extract from an exhaustive article entitled: "The MOULTS OF THE BRITISH PASSERES, WITH NOTES ON THE SEQUENCE OF THEIR PLUMAGE," which is appearing in that magazine, the portions which refer to such birds as are generally kept in cages or aviaries. Readers are referred to the magazine mentioned for the complete account.

GENUS *Muscicapa*.

THE moults and sequence of plumages of the Flycatchers on the British list are very interesting in that they differ in the different species. As I have been unable, for want of material, to trace the moults of the Collared Flycatcher, the following summary refers only to the four remaining species.

The adults in late summer or early autumn have a complete moult in the Pied and Red-breasted Flycatchers, but only moult the body-feathers in the Spotted and Brown. The two latter, however, have a complete moult in winter or spring, while the Pied and Red-breasted have only a partial moult at this season. In the Pied this moult includes all the body-feathers and some of the inner secondaries and wing-coverts, while in the Red-breasted not even all the body-feathers moult and none of the secondaries or wing-coverts.

The moult from the juvenile to the first winter differs in detail in each species. Though all moult the body-feathers, the extent of the moult in the wing-coverts and secondaries varies. The first spring moult is like that of the adult except in the Brown Flycatcher which, instead of having at this time a complete moult as the adult, renews only its body-feathers and some wing-coverts as in its first autumn moult.

With regard to the sequence of plumages, the juveniles in all the species may be generally described as being spotted on the upper-parts. In the Spotted and Brown Flycatchers the sexes are alike in the adult both in summer and in winter, and the first winter birds can be distinguished by the pale tips to some of the wing-coverts, though this difference disappears in the summer in the case of the Spotted Flycatcher which has a complete moult in spring.

In the Pied Flycatcher the adults, male and female, are very much alike in winter though so different in summer. The first winter birds can be distinguished from the adults by the pale tips to some of the wing-coverts, and in the male by other small differences. In the first summer the female is practically indistinguishable from the adult female, but the male has small distinctions from the adult male.

SPOTTED FLYCATCHER (*Muscicapa s. striata*).

ADULTS.—The body-feathers are moulted from July to September, but usually the wings, wing-coverts and tail are not moulted before the birds migrate, although occasionally some secondaries and wing-coverts and rarely the central pair of tail-feathers are moulted. From November to March, when the bird is in winter-quarters, a complete moult takes place, the wing and tail-feathers and wing-coverts being then moulted as well as the body-feathers. The sexes are alike, and the winter and summer plumages do not differ. The pale edgings to the wing-feathers and wing-coverts become much worn before the new feathers are acquired, and as summer advances the upper-parts become greyer-brown.

JUVENILE.—The upper-parts have a very spotted appearance owing to each feather having a pale buff centre with a narrow dark brown margin; the breast and flanks are also rather spotted than streaked as in the adult, each feather being buffish-white with a margin of dull brown; the median and inner greater wing-coverts have pale buff spots at the tips of the feathers. Sexes alike.

FIRST WINTER.—The juvenile body-feathers, lesser and median wing-coverts and innermost secondaries are moulted from July to September, but not the greater or primary coverts, nor the tail nor rest of the wing-feathers. After the moult the first winter bird can always be distinguished from the adult by the broader pale edgings to the secondaries, and by the spots at the tips of the inner greater coverts, while sometimes a few juvenile body-feathers are also retained.

FIRST SUMMER.—A complete moult takes place as in the adult, but rather later, extending until April (exceptionally May). The new plumage is indistinguishable from that of the adult.

PIED FLYCATCHER (*Muscicapa h. hypoleuca*).

ADULTS.—Complete moult in July and August. Early in the year (apparently January to March) most of the body-feathers, three (occasionally four) innermost secondaries, the inner greater wing-coverts (outer very seldom), and sometimes some median and lesser wing-coverts are moulted, but not the rest of the wings nor the tail.

The sexes are very much alike in winter plumage, the upper-parts being dark brown, but while the male has usually white or creamy bases to the feathers of the forehead the female has either brown or creamy bases and never white, the rump of the female is brown, but that of the male often (but not always) is a mixture of black and brown, the upper tail-coverts of the male are black with some of the shorter feathers with brown tips while those of the female are usually brown but sometimes black with brown tips. In the female also the tail-feathers are dark brown and never so black or blackish as in the male.

In summer the plumage of the female scarcely differs from that of winter, but there is a little more white on the secondaries—the under-parts are rather whiter. The male, however, differs strikingly, having a white forehead and glossy black upper-parts, though a varying number of brown winter feathers remain unmoulted especially on the back and rump, the under-parts become pure white, and the new secondaries and greater coverts black and white, the new median and lesser coverts black, the former occasionally with white tips.

(To be continued.)

LIVE BIRD LABELS

Always use them when sending birds away by rail.

POST FREE FROM "CAGE BIRDS," 154, FLEET STREET, LONDON.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED, SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. H. A. Wilson, 14 West Bridge St., Bishop Auckland.

When to Gather Wild Seeds.

SIR,—In answer to further questions asked by "Novice," he will find the best times for gathering seeds mentioned as follows: Shepherd's-purse, June and July; knapweed, August; teazel and dock, late August and early September. In those months the seeds are quite ripe and easy to gather. Regarding the abstraction of the seed from the heads of the teazel, he will find that the seed when quite ripe will fall out quite clean by holding the head upside down and gently shaking it; in fact, it is one of the easiest of all to abstract. I shall be pleased at any time to answer any questions which are beneficial to the Fancy in general, as I am and have been for a good number of years a keen fancier of Canaries, Mules, and British birds. Of the latter I have caught many in my time, and consider it quite a fascinating pastime, providing one uses no cruel methods, looks well after his captures, and is not always looking at the monetary side of the business.

E. W. HUMPHREY.

Breeding Roller Canaries.

How to Make a Start.

SIR,—I am sending you the following short notes in the hope that they will be of some assistance to those about to start in keeping Roller Canaries.

The novice should purchase a few cock birds with good deep song, and some young hens of the same strain, for he will get far better results in this way than in pairing birds derived from different sources. He may either go to some reliable breeder or an exhibitor at a Roller singing contest, and ask him to fit him up with such birds as he requires, or he should go to a Roller singing contest where he will be able to get the opinion of the judge, which will, of course, help him materially.

When I started in the pleasant hobby of breeding Roller Canaries, that is, about twenty years ago, I knew nothing whatever about this bird or his song. I was living over fifty miles from any town in which there was a Roller Canary Club, and I did not know a single exhibitor of Roller Canaries. I was therefore, entirely on my own, and did not do any showing for the first season or two. Having started taking CAGE BIRDS, and gathered much information from its columns, I started exhibiting, and from that day to the present have had considerable success.

The novice will greatly be helped if he will join a club, and go to the monthly meetings, for there he will gather much valuable information which I myself was not able to obtain when I started in the hobby.

My own method of breeding Roller Canaries is as follows: I put up about twelve or fourteen hens, and half the number of cock birds, running two hens with each cock. I get half my hens down at the same time, so that if there are some of them which will not feed their young I am able to transfer them to any of the others.

If most of the first round eggs prove fertile I only take two nests from my hens during the season; but if not I allow them to go to nest the third time. It is of very great importance that the birds should be in good condition before a start is made: to hurry in this direction is only to lose valuable time instead of gaining it. This season birds are very backward owing to the long spell of cold weather, and will be a month or so later than any ordinary season. I would just say in my bird rooms I use no artificial heat whatever, but leave the birds to come into condition in an ordinary way.

Fifteen Years Old Linnet Dead.

SIR,—In reply to Mr. H. Norman's letter some time back in CAGE BIRDS, re birds living to a good age in captivity, I am sorry to say that my Linnet died last Sunday morning, aged 15 years. My method of feeding him was canary two parts, rape one part, and as titbits I gave him dandelion, thistle, inga, sesame, gold of pleasure equal parts. His green food was chickweed and watercress. He was in the best of health until the last six months. J. HUGHES.

The Value of Green Food.

A Canary Lives for Six Weeks on Brussels Sprouts.

SIR,—The bird mentioned in my lecture was a Roller Canary, which I took at first to be a hen and only worth 1s. 6d. at that time of the year, so I did not trouble about it. But I was very curious to see how it would fare in mid-winter at large; it was always in my patch of Brussels sprouts, and must have lived for six weeks on little else, as there was so little of anything else about.

I quoted this to show how important a food green food was for Canaries, when a bird could practically live for six weeks on it and then burst into full song. J. JEFFREY.

Is Tredegar C.B.S. Dead?

"One Interested" Gives His Name as Desired.

SIR,—In reply to the sec. of Tredegar C.B.S., I think the question asked could have been answered, as I have personally asked him the reason why there have been no meetings, and also why he sent a schedule for an unflighted show to all members, and then cancelled the same till a future date. That date has not yet arrived, and knowing that he travelled to all the leading shows of Wales, and has also followed up the meetings of another society, I think he could spare a little of his time to the society that he is holding office for. I think that an explanation is necessary, and I trust he can give a satisfactory reply to the question asked, as the space in CAGE BIRDS is too valuable to be wasted on such questions as these, for we in Tredegar have to rely on this valuable paper for all information on birdy matters.

G. O. THOMAS.

The Care of the Linnet.

The Forced Moult Cruel and Unnecessary

SIR,—I was very much interested in Mr. Porritt's article on the care of the Linnet, as I have always been a lover of British, and I consider Mr. Porritt's article of great merit. In my opinion, Mr. Editor, you acted perfectly correctly in not publishing "Rambler's" method of forcing the moult. I have myself moulted nearly one hundred for catching purposes, but I can only say with honesty that of 87 birds that I have force-moulted, I have only had one good one out of the lot, as they never make much after a forced moult; it takes the best blood out of them. I have given up this practice both with box moult and damp moult, and will never use it again. I notice Mr. Porritt mentions the bottle. I don't know the meaning of the bottle, but I can form conclusions as to the meaning. I have only sung once with Linnets, and got fourth prize, although the bird had only been caught three weeks, and I can assure anyone that this bird never had anything but canary, rape and linseed, and dandelion tea. I may say that I had one of the best Linnets in Lancashire for contest singing, but as I did not sing with them I sold it. Mr. Alec Donnelly, the owner of the bird, has won dozens of first prizes with it, and he is still one of the best, so I can only say that anyone starting with Linnets should take the advice of Mr. Porritt, and if they will keep to this method I feel sure success will reward them. I myself like giving my Linnets a little wild seed such as groundsel, chickweed, plantain, and shepherd's purse when in season, and they fully enjoy it. I would like to say a little more, but I will write a few notes on the Waxwing and the Nightingale for next week's paper if you think they will be worthy of publishing in your valuable paper CAGE BIRDS. May success attain Mr. Porritt and all such fanciers is the true wish of

W. LLOYD.

[We shall be pleased to receive the promised notes on the Waxwing and Nightingale.—Editor, CAGE BIRDS.]

Breeding Winning Norwich.

On Making a Start.

SIR,—In reply to "Lover of a good Norwich" I may say that had he heard my lecture he would probably agree that the person whose success depends upon the advice of others is spoon fed. The individual who cultivates and backs his own intelligence becomes self reliant, and the better man and the better citizen. F. J. MARTIN.

The Colour of the Linnet's Beak

SIR,—I purchased recently from a well-known bird dealer in Edinburgh a very nice house-moulted Linnet for muling purposes. The bird is well shaped and in excellent health, but it seldom sings, and on looking at it carefully the other day I observed it has a remarkably white or light coloured bill. I wonder if Mr. W. Porritt or any other writer on the Linnet in recent issues of CAGE BIRDS can explain this. The last Linnet I kept for several years had a dark bill and was a splendid song bird.

JAMES HAY.

[The colour of the beak of the Linnet varies according to the season, and to the condition of the bird. When a Linnet is in breeding condition his beak his bluish-black. At other times it is flesh or horn-coloured.—Editor, CAGE BIRDS.]

Why Members' Shows Fail.

The Misuse of Commendation Cards.

SIR,—"A Fancier" seems to have woefully misconstrued my letter on this subject. I should be the last to support a money-grabbing policy, either at members' or open shows. I fully recognise the wholesome influence upon the fancy which members' shows wield, indeed they seem to be almost the only shows held at all now. At the same time it must be borne in mind that where open shows are discontinued, or where, being held, they result in financial loss, it is absolutely necessary if the club is to keep above water that the members' shows should be made to well pay their way. "A Fancier" says he is "up against" my suggestion to charge higher entrance fees, but when one notices that he himself recommends the advancing of the entry fees to a flat rate of 7d. per bird, and the reduction of prize-money to a basis of 4½d. per bird, one may be pardoned for wondering where his opposition comes in, particularly as he also applauds a club which charged 3d. per bird and gave no prize-money whatever. At the best my critic's difference with me on this point is one of detail rather than principle, for we seem to agree that where a profit is desired the entry fees must bear a more generous relation to the prize-money than they do at present.

I cannot, moreover, see any improvement in the method "A Fancier" suggests of counting points for special prizes. Under this, as in the old system, an exhibitor who scores first and second in a class might be beaten by another exhibitor who merely filled the class with indifferent and worthless specimens, and scored third, fourth, vhc, and hc, just because there was no other competition. To be fair, more than one point must separate the various grades in the scale of awards, otherwise one is almost as well off with a second prize as with a first.

Why "A Fancier" should object to the judge withholding these commendation cards at his discretion passes my comprehension. It must be humiliating to say the least of it to compel a judge to affix his official commendation to a bird which offends all his fancier instincts. If it be necessary for competition purposes to issue seven cards, then issue them by all means, but call them what they really are, namely 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, and then issue your vhc, etc. cards to any birds of outstanding merit—if such there be—which are not in the cards. But to call a really bad bird vhc is such an obvious misnomer that it makes the fancy look ridiculous.

What would "A Fancier" say if at a great chemical exhibition he heard one of the judges say: "I have given Jones' pills an order of merit. I know they are rubbish, made of soap and jalap, but I had the distinction to award, and there was no one else left to award it to." A. R. COE.

The Trouble of the Sweating Hen.

Is Nervousness the Cause?

SIR,—After reading Mr. L. Williams' letter on the trouble of the sweating hen in your issue of April 28, I would like to give my opinion on the subject. Although quite agreeing with Mr. Williams in some respects, yet I don't look at the matter altogether as he does. In the first place he attributes the trouble to the feeding. Now, it is a very good plan to look for the cause before trying to remedy any trouble, but I am afraid he has got on the wrong track in this case, if he will pardon me for saying so, as this is the main point where our opinions differ, and perhaps he will see as I do when I point out what I mean.

During my experience in the fancy, which is not very great, seeing it is just on twelve years this season since I started, I have found that surfeiting the hens with too much rich food after the young are just hatched brings on a trouble of another sort; not sweating, but the other extreme, starvation, as the hens eat so greedily at the mixtures given, after being on plain white seed during the fortnight of sitting, that they take more than is necessary to satisfy the needs of the newly hatched youngsters. This has a tendency to feed up the hens again, and make them forsake the young and go to nest again with a fresh clutch of eggs, and if it so happens that you have no more youngsters of the same age that you can put them in with it means "death from starvation."

Now the sweating hen is altogether different. After her eggs are hatched she seems to think so much of her young that she won't leave the nest either long enough or often enough to get sufficient food for her chicks, which means that if they live to leave the nest they seem to want a nurse with them always. But the biggest percentage die, not altogether for want of food, but also for want of air, which they cannot get when the mother is crouched down in the nest, and so seldom leaves it.

Now, my idea of the cause of sweating in any hen can be written in one word, and that is "nervousness," which is more often seen in unflighted hens than in older birds. You might naturally consider that young hens that you have bred yourself should be used to your knocking about the bird room. This is, perhaps, correct, and yet the first year's breeding is a new sphere of life for her, and she is so jealous and mindful of her babes that she will not even trust them to the care of the one who tended to her own needs from infancy, but as an over year hen she may prove to be an ideal mother.

So much for that; and now what can we do to alter all this? Before I proceed any further let it be understood that I do not wish to pose as an expert on the subject under discussion, nor do I wish anyone to follow my methods if he has a remedy of his own. The reason for my writing this is that I have at several times received a lot of help from the correspondence carried on in CAGE BIRDS weekly, and if only I write a sentence that will help any fancier in any way I shall be greatly pleased.

In the first place, the sweating hen is one of the hens that must be separated from the cock bird while feeding. If not, she will call for her food instead of leaving the nest for it, and, of course, that would be helping her to sit closer to the young.

One I cured of the habit in the following manner. After a few days I found she was not doing what she ought, so I took a stroll into the fields and returned with a nest of Greenfinches which appeared to be of about the same age as my young Canaries, and after giving the Canaries to a pair I had feeding at the same time I put the finches in the nest of the sweater. These, being much stronger, seemed to grow much faster than Canaries, and kept the hen going feeding, as they never appeared to be still in the nest. Anyhow, it had the desired effect, and, besides, it brought a cock bird on to feed that previously I had never seen feeding young. I am firmly convinced that anyone trying this method will prove that it will cure sweating hens or non-feeders.

Another method I have heard of, but have never tried, is making the egg food salty, which is supposed to make the hen leave the nest oftener for a drink, and this allows the youngsters more air.

Another point I believe in is giving whole hemp seed to the hens to feed with, for it entails a longer period off the nest, as it is hard for them to crack. I know many believe in crushing the hemp, but I do not; I give all seed in the whole state, and in separate vessels, and I might say with a certain amount of success, as I have bred Canaries, besides Mules from the Goldfinch, Greenfinch, and Linnet, and have got a nest of full eggs from a Hybrid pair, Goldie-Greenies, which I found had gone under just previous to chipping, all in one season. I attribute my success to the help of CAGE BIRDS, which I practically devour every Friday, and whenever I can I bring it to the notice of new fanciers. And now I would ask pardon for taking up so much valuable space, but I have felt that I would like to give a little of the help to others that you so kindly give us weekly, and I wish you continued success in your efforts for the fancier.

H. A. WILSON.

(Correspondence continued on next page.)

CORRESPONDENCE.

(Continued from page 260.)

Early Outdoor Canaries.

Sir,—As I am a regular reader of Cage Birds it may interest you to know that I have a nest of three young Canaries in an open outside aviary. They were hatched on April 25, and are going on well. Don't you think they are very early after the hard winter we have had? There is no heating stove of any kind in the aviary. I have not heard of any other young birds about here yet, and fanciers tell me I am the first to have them.

Hy. Wood.

Breeding Exhibition Norwich Canaries.

Use Only the Best in Trying for the Best.

Sir,—The breeding season is now here, and we are all on edge to get to business. We have to depend partly on the "Wait and see" principles, but as our methods are usually guided by our past experience, we will be trying our best to right the wrongs of last season. I have been struggling along in the fancy for a good number of years, trying year after year to improve my stock in head and neck, the much sought after properties in a winning Norwich. I find it a difficult task to master. However, my intention in penning these few remarks is to give my own personal opinion of the best way to obtain this.

I have found in my years of bird breeding that the male bird is always distinctly demonstrated in the extremities of the young, that is, the head, wings, and tail, and if we are to improve our birds in these directions we will have to discard all weak headed cocks when pairing up for the breeding season. It doesn't matter how good in head and neck your hen is, if you pair up to a cock decidedly weak in head, 75 per cent. of the progeny will also be weak in head. I have been disappointed on several occasions in the results of my pairing up when I have tried to counterbalance the defects in one bird by the introduction of good in the other, for when we look round our birds we usually have some difficulty in fixing up the same to produce us that "ideal" Norwich we are all hoping to obtain.

When pairing up my birds I look for the best exhibition cock birds I possess, then select the best exhibition hens, and then pair up the very best cock to the very best hen. I leave nothing to chance, and sometimes I am able to produce a decent bird or two. I always find that by the time I get one or two of my best pairs mated up I have become "buffered locked," to use a railway phrase. I am at a standstill. I have used up my best and am left with those which would have been good ones if they had been better in head and neck. Now to pair up those to produce winners is in my opinion a matter of chance, and the chances are limited, so I would recommend the beginner to pair up only his best, and at the end of the breeding season it will afford him a deal more satisfaction to find he has been able in this way to produce something decent than if he had bred a room full of wasters.

To prove that I am not entirely wrong in my suggestion as to the male birds being so dominant in the extremities of the progeny, we have only to look carefully at the Hybrid and Mule classes at any of our shows, and we are able to say with some certainty what has been the male bird. Take, for instance, the Goldfinch-Canary cross, and what do we find? The Goldie's head, wings, and tail; and all other crosses are known to me in this manner.

I am sure if the young fancier will just give this method a fair trial he will find it usually works out all right; don't try to breed a room full of winners, but be content with a few good ones. At some future time I will perhaps give my method of feeding, moulting, and staging an exhibition Norwich.

R. Colley.

Inbreeding.

No Credentials; But Believes He Has a Case.

Sir,—It is an old dodge in journalism and with politicians, when an opponent brings forth facts which can't be disproved, to confound the issue by attacking his personality or his reputation. As I glanced through my "skit of a cynic" as written for general consumption, I was struck afresh at the hopelessness of a frontal attack from the inbreeders, so an attack in the rear is the correct course to pursue. Because I have not produced Norwich to beat Sam Cook, or Yorkshires to beat Mr. Dykes, I am not a fit person to contest the theories of inbreeders. Did Mr. House ask Mr. Crawhall or "Beejay" and the other writers who were bolstering up his case for their credentials? No. But because he has no case he seeks the refuge of a beaten man and tries to confound the issue by trailing red herrings.

In that little fourpence a week school where a little anæmic teacher tried to force a little knowledge into my carcase, I was told that it was bad manners in conversation to talk of oneself, and that lesson seems to have had a certain dominance over all the others ever since. There is always safety in talking of other people's successes, and that is why I have mentioned the champions of others to prove my arguments.

If Mr. House had tried to convince your readers that the wonderful green hen, the champion buff cock, and the champion "Dreadnought" had been bred by inbreeding and not from unrelated stock, instead of writing a letter which doesn't further his arguments, he would have done some good to the cause of inbreeders.

When I was much younger—very much younger—I used to think it would be nice to be an Editor. It appeared to me that the height of one's ambition would be reached for one to be able to give everyone hell without any interference from outside. As was to be expected, my dream was never realised, so I became a bird fancier and studied Mr. House. He was my beau ideal of a fancier journalist. He had kept, and was an expert on, dogs, cats, cavies, fowls, rabbits, Canaries, white mice, and pigeons, and when I read his latest letter I don't know whether he wouldn't have made a good lion tamer. Anyhow, he seems to have crowded a good many hobbies into his life, and if he kept them all at once he must have had something approaching a menagerie. (By the way, did he never keep hedgehogs?)

But, as I said, I studied Mr. House. I studied his style, and particularly that truculent style which he confesses to. And then one time I sent a letter to a paper, a letter in which—I confess—someone was getting it in the neck, as the modern flapper would say. Two days later the Editor returned my manuscript, and said in a covering letter, with that urbanity of which he is a past master, and which should be a sine qua non in all journalists, that he hoped I would not press for its publication. That Editor has earned my undying gratitude. He taught me a lesson in a few short words that one might be sarcastic, one might be satirical, one might treat an opponent with ridicule, but personal abuse was the refuge of a beaten opponent. It is much wiser to turn the other cheek.

As I understand this controversy, two or three fanciers of high social standing were trying to convince breeders that by inbreeding their stock they would produce more winners and greater champions than by the ordinary methods of buying from different studs; and, going about the shows as I do, making notes of winners, and asking from the owners how they are bred, I knew that the advice was wrong—entirely wrong, and also, knowing the changes that have taken place in Norwich Canaries in my own time, I knew instinctively that those changes could only have come about by selection and by buying the right sort of stock. A man need not be a breeder of champions to know when he sees a good one, or to ask how it is bred. Now, does he?

If a fancier's stock is deficient in a certain point, can he remedy that defect by inbreeding? No, he fixes it. By inbreeding, you are revolving round and round like the earth on its axis. You can produce show birds, but your stock is likely always to be deficient in that point unless you introduce one or more birds excelling in that point, then you are on the road to success. But that, to my mind, is not inbreeding. Those are deductions made by a fancier without credentials.

I have seen it advocated by inbreeders that a man may start with three pairs of birds, and need not introduce fresh blood for many years. Sam Cook's buff cock and Mr. Green's hen were not produced that way. I do not think any man will cavil at the statement that Mr. Cook is our most consistent and successful Norwich producer. If they do, I will qualify the statement by saying he is one of the most successful. That will meet the argument. Well, what of it? Simply this. It is no secret that Sam introduces fresh blood every year—sometimes one bird, sometimes two, just as he requires them.

The same may be said of Mr. Crawshaw and many of our most successful breeders. Our friend Jack Houghton claimed Mr. Spillman's winning unflighted hen at Cardiff. If he is a great inbreeder, why introduce fresh blood? Surely no one will deny the success of Mr. Houghton? Mr. Dykes bought "Dreadnought." If he could produce as good by inbreeding, why did he buy it? These are questions asked by a fancier without credentials, and questions that cannot be answered by the inbreeders. They are brought to a dead stop. These are unanswerable facts, proving that the best in the land are produced from unrelated stock. It is Mr. House's turn to go one better, and when he proves that a champion as good as those I have mentioned has been produced by inbreeding methods he will find that I shall be the first to own up and shut up.

But I am not near finished yet. I have never kept dogs, or cats, or rabbits, or cavies, or white mice, or rats—intentionally, anyhow—but I keep pigeons. At present I have five varieties of pigeons, including one that Mr. House has suddenly become an expert on—with, I hope, credentials. I mentioned show homers in that "skit," but I only mentioned one case. I will give another.

Every show homer fancier knows Bob Cocker. He kept show homers when I was teething. Rumour has it that he was brought up on them; anyhow, he owns a wonderful chequer hen. Mr. House knows her, and Fred Denham, the well-known judge, says that she is the best blue chequer hen living. I asked Mr. Cocker her pedigree, and whether she was bred by inbreeding, i.e., from related parents. He gave me an emphatic "No." Two years ago he won the Northern Counties Trophy—a very high honour—with a mealy cock, bred from unrelated stock. I have no credentials beyond winning at Maindee in a limit class, but there are the facts. The fact is, if we were to wait until Bob Cocker or Sam Cook wrote a treatise against inbreeding, some of us would have grey hairs. Plenty of fanciers can produce winners, but they can't compete with Mr. House in journalism, while I—well, I am just a chronicler of other people's successes and methods.

Mr. House accuses me of prejudice. Why should I be prejudiced? I don't know him, nor does he know me, and if his name was introduced it was certainly without prejudice. Nay, I even paid him compliments. If he still thinks otherwise, he must put it down to my truculent style.

One of the principals in this controversy, who is such a believer in inbreeding, travelled from Plymouth to Newcastle, and from the East to the West coast, buying the best that could be bought. He paid £8 for the best hen that was bred two years ago. She was an ideal Norwich. Now, if he could produce the best from inbreeding, why was he buying all over the country? Was he a Daniel come to judgment? And do I need credentials to tell that story?

A fortnight ago I received a letter from one of England's greatest Norwich fanciers, and one of its most popular. I cannot give his name without his permission, but in his letter were these words: "I am glad to note the rabid inbreeders are now getting some corrective. At one time I inclined to the idea, thanks to C. A. N. (sic), but of late years have steered clear of it. For one thing the longevity, or period of reliable breeding operations, in Canaries is not long enough, and it is not possible to revert to certain sires or dams just when needed, because such would have joined their fathers long ago." That letter is from a fancier with credentials.

Do you know, I am fond of quoting Mr. House, and I have just been re-reading his book on Norwich Canaries. In his introductory remarks he says, speaking of the eighties and nineties: "The Norwich of that time was a very different bird to the Norwich of to-day. Times change, and birds, like men, change with them. In those days the Norwich Plainhead was a smart little fellow, not much larger than the Border of the present time. To give my readers some idea of the change which years have wrought, I may say that in size and shape the Norwich and the Lizard were at that time very much alike . . . in length about five and a half inches. Now we have a different stamp of bird altogether—stouter and fuller, deeper and wider, as well as longer." Further on he says: "These differences are so great that one can hardly credit that such changes would have been wrought in a quarter of a century by a body of men so conservative as cage bird fanciers."

I am not cavilling at the statement, but, if I may be allowed to ask without credentials, were these changes brought about by inbreeding? It is unbelievable. Quoting Mr. House again, he says: "It was in the year 1883 that we saw the first of the big birds in the south. He came from the stud of one who has turned out many a good Norwich—Mr. C. E. Silk. The bird was called 'The Wonder,' and he was well named, for he did indeed make the fancy wonder." Indeed, it makes me wonder if he was produced by inbreeding.

In the chapter devoted to selection of stud, Mr. House says: "No matter how much care is exercised in selecting birds, if they come from different studs they are not likely to mate satisfactorily, whereas if chosen from one stud they are almost certain to hit and breed decent stock the first season." Fanciers, note. It is rank heresy to say so, but the best Norwich buff hen ever staged, the green hen, was bred from two different studs at the first time of asking.

Speaking of the green hen, where Mr. House says I put words into his mouth, and where he says he would certainly not have advised Mr. Green to pair daughter back [illegible] ask unprejudiced fanciers to note that if the old original hen is of correct shape and size, possesses plenty of quality and good colour, he should pair her to the son most like his father, and the old sire should be mated to his daughter most like her mother." And this: "An experienced breeder knows this, and would pair sire to daughter and dam to son, the rest brother to sister, and find the next season's results approach the desire of his heart." Did I put those two sentences in Mr. House's mouth?

He asks for my credentials. Has he asked for the credentials of those fanciers who have taken the other side and have helped to bolster up his case? Ah! but that is another story. My credentials are those of the average fancier who visits shows, who visits fanciers, who knows their methods, who goes about with his eyes open, and, beyond winning a few firsts and seconds at such shows as Liverpool, Manchester, Bolton, Burnley, Accrington, Gt. Harwood, and Warrington, I have no credentials to offer except a clean conscience; but I would ask fanciers to examine the evidence which I have set down. I am speaking of birds which you all know, of fanciers whom you all know—present-day champions. Mr. House talks of fanciers and birds of 30 years ago, men whose credentials are forgotten.

In conclusion, I would repeat that I have never said that winners could not be produced by inbreeding, but when you know that champions of all the champions are produced the other way, well—what would you have?

T. Johnson.

Is Mr. Johnson Inconsistent?

Sir,—After reading the lecture on Inbreeding by Mr. Johnson and the correspondence from the pens of Mr. House and two other writers, I feel that I cannot allow the chance of saying what is in my thoughts at this time to slip. I am convinced that the lecturer cannot be really serious. He is, I believe, pulling the leg, as it were, of other fanciers just to draw out the dormant thoughts of men who will not put their thoughts in writing. If I am wrong I also am open to correction.

His lecture to me seems to be a mix up of this; he believes in inbreeding in the one sentence, and in the other he does not. For instance, the one time he would pair a hen which breeds and feeds well, and that lays a large clutch of eggs, to a cock that comes from a similarly free breeder, then pair back to their parents, and then introduce an outcross every second or third year. He calls this inbreeding according to the paragraph beginning with "you may have come to the conclusion," etc. Now I consider this a muddle up of alien blood, and not inbreeding at all. Inbreeding is, as Mr. House puts it, a system. I will go further and say it is a science; that is the reason it has so many opponents. Not being easy to grasp or master it is condemned by those that have not the patience to carry it out to the letter.

He also says it requires first class stock that is exhibition birds, if one must be successful. This is not the case, and I will give you a case in point. I paired together last breeding season father and daughter, neither of them was a show bird, but they were bred out of a pair that had won at one of our local shows, 3rd and vhc. They were not considered good enough to send out to the open, but from this pairing of father and daughter I reared the best that one could wish to look at, and if they had been in the hands of some of our leading Border Fancy breeders could have won without a doubt. I only exhibited two, both cocks, and in their respective classes they won for me first and second, and in good competition at that. I am not keen on exhibiting, or I might have won more, in fact I am sure I could, as all the cock birds were far ahead of their parents. I only got two hens from the pair and five cocks, so you see it can be done with mediocre stock. I may state they were a perfect match for one another.

I am taking up too much space, but I crave just a little more to ask our genial Sam, the one and only, a question re the buff cock mentioned, bred from related stock, that stood 2nd to his father so many times. Was he a young bird last year? If so, can he improve so as to be able to beat his father this year? I believe he will if still to the fore.

I do not think it fair to say that the son was not so good as his father when you consider that you are putting a first year bird against a matured one, especially with Norwich Plainheads, as they are reckoned to improve very much in the second moult. I hope I have made myself clear on this matter, for the subject of inbreeding is a very interesting one to me, and I am glad that we have good old Cage Birds to thrash out our views.

T. R. Wallace.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*

(3)—*Queries intended for different specialists must be written on separate sheets of paper.*

(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*

(6)—*Queries received during any week, up to the first post on Saturday morning, will be answered in the issue bearing date of Saturday in the following week.*

(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*

(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*

(9)—*All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

YOUNG DYING.

R. T.—As you appear to suspect that your bread may be partly the cause of your young birds dying in the manner you describe, I will say at once that if it is similar to what we get in the place where I live, it would be the very last thing that I should be inclined to suspect as a probable cause. Possibly, the sawdust on the floor of the cages in place of sand might be in some way a contributory cause, especially if the parents pick much about the floor after morsels of moist food that have been dropped, or green food which they give to the young. Clean, gritty, calcareous sand is far ahead of anything else for covering the floors of the cages during the breeding season, and although sawdust is of very good service at other times, I do not advise its use during the breeding season. Also I am not in favour of giving a free supply of dandelion as green food when young are being reared, and in your case I think you would do much better to give either chickweed, flowering heads of tender young groundsel, lettuce, or even watercress, giving preference to them in the order named. There is nothing whatever wrong with the seeds of which you send samples, which are all of fairly good quality, and the hemp in the mixture of excellent all-round quality, but the mixture is not a judicious one. It contains too much niger and teazle, and too little variety for a mixture. You would do better either to give a moderate supply of hemp alone daily after the young are about ten days old, or use the mixture which you will very often see advised in this column. For the present I would advise you to substitute sand for the sawdust on the floors of the cages, and when the next young are out start on the third day giving a little crisp young groundsel, which will be more easily getatable than chickweed, and I see no reason why you should not meet with your usual amount of success. If the young appear to falter at all, add a crystal of sulphate of soda the size of a small pea to the drinking water of the parents for one day. I shall be glad to hear the result of the next brood, and if you will repeat particulars I will advise you further if it is necessary.

SAMPLE OF SEED MIXTURE.

F. O. D.—(1) A simple mixture of three parts canary to one part summer rape is to be preferred to any more elaborate mixture as a staple diet during the breeding season, or at any other time for the matter of that, but if you prefer a more varied mixture the one of which you send a sample is a fairly reasonable one. It might be improved by at least doubling the proportion of rape and reducing that of linseed by two-thirds, and the proportion of niger would also bear a fair amount of reduction. (2) The mixture is composed of canary, the bulk, summer rape, niger, linseed, brown and Indian millet, and crumbs of egg bread. In addition, there are a few stray grains each of white millet, sesame, grass, dock and bindweed, possibly adventitious rather than intentional items.

LOSSES FROM EGG-BINDING.

T. S.—Seeing you have "Canary Breeding for Beginners," and also the "Manual," you can scarcely need a definite table for feeding the birds after they are mated. See, for instance, pages 32 and 33 of the former, which is practically what you wish. This system of feeding you can quite safely carry out from the time the birds are mated until the hen begins to sit. It is certainly very disappointing to lose so many hens from this trouble in so short a time. It is of very little use giving a little inga now and again as an item of the dietary at this season, with the hope of preventing egg-binding, neither is there much practical good to be expected from giving salad oil in the water, the effect of which is more likely to be a badly soiled and bedraggled appearance of the plumage than anything else. With regard to the inga seed, to get the proper benefit from this as a preventive of egg-binding it must be given all through the back end of winter and spring in quantities of about half a teaspoonful per hen twice a week. The salad oil would be of even less effect, and a drop of molasses about every second day for a week or so before the hens were expected to commence laying would have been far more effectual, supposing there was any real need for anything at all in the water. In a general way I would advise you to adopt these few hints at once, and meantime digest well the contents of the handbooks you have, and be guided in the details by what you find in those pages, and given normal and healthy stock you should find this trouble reduced to an event of rare occurrence. Stop all drugs and nostrums for the present, keep the cage floors strewn with clean gritty sand, and when the hens are going to nest get a little old mortar, sprinkle with common salt, and then smash it up to a coarse sand and strew a little of this on the top of the sand on the cage floors two or three times a week until the hens have laid their full clutches, also keep a piece of cuttlefish in each cage where the hens can gain easy access to it from the perch. Give a staple diet of three parts canary to one part summer rape mixed together, and in addition give every second day to each pair a small teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, and twice a week on the alternate days give a morsel of bread and milk with two drops of cod liver oil emulsion on it, and sprinkled with maw seed. Continue this also until the hens have again gone to nest. For green food, now that more variety is available, give either chickweed or the tender flowering tips of groundsel, but utterly avoid dandelion for these hens. See they are kept in a bright and healthy situation, free from direct cold draughts and damp. I shall be glad to hear result of the next attempt at nesting. Don't hesitate to write again and repeat full particulars if anything goes wrong, and I shall be pleased to help you further if possible.

AVIARY FOR YOUNGSTERS.

Beginner.—The space set apart for an aviary for the young seems to be very fairly arranged, and there is little alteration that I would suggest. On the sketch there is no protection for the window marked, so if this has been overlooked you should not fail to cover the window space with fine netting as a precaution against escapes in case the window should be broken or accidentally left open. String netting fixed taut to a light wood frame would answer the purpose. As a set off against the tree, which is, I take it, in a tub near the centre of the room, you should fix up a fair sized branch of Scotch fir on the wall opposite the door, and a little beyond the tree, but kept fairly well in the light from the window; you should fix up a feeding table on which to place the dishes, boxes, or whatever they may be, containing the foods for consumption and the drinking water. This may be quite a simple board, fixed on a single support for preference, around which, about a foot above the floor, should be securely and closely tacked a band of tin or zinc six inches wide. This is to prevent any stray mice that may find a way into the aviary from climbing on to the table and pillaging the seed. The bath may be given as required on the floor. If the floor is not covered with clean gritty sand, a supply of this should, of course, be given in a shallow box in any convenient corner of the room on the floor. For perches you might suspend one or two long swing perches from the ceiling, or as a variety from this kind of perch you could substitute a kind of gymnasium of swing perches, as you might have seen described in our columns recently. Across the corners you could fix perching similar to broom handles, but rather thinner than this material, which, with a number of small perches made of ordinary perching, about 18ins. long, fixed to the walls at intervals by means of small brackets, would make a good variety and very ample perching space for quite a large stock of youngsters.

SHELL-FORMING MATERIAL, ETC.

E. V.—(1) Undoubtedly the lime which collects on the bottom of kettles used for boiling very hard water would be a useful adjunct during the breeding season to help the hens to get material for shelling their eggs. At the same time, if a hen eats freely of cuttlefish there is exceedingly little need for any such worrying exertion as this, as it will supply all that is really necessary to assist nature to supply the demand. (2) Only time could prove whether the thorns of the rose would be any danger to the Canaries if left in the present condition. But, anyway, as there is only the one tree, why not leave no room for doubt by nipping the points off the thorns with scissors, which would not be a very big job, and the new crop, which would only appear on the new wood, could be blunted as soon as the new wood was grown. Either binding the branches of the creeper, as you suggest, or tacking over it to the wall on each side a strip of felt, should serve your object. The latter might be preferable, as the growth of the wood would inevitably burst the bandages. (3) "Aviaries, Birdrooms, and Cages," 2/3, post free, from our Manager, is doubtless the book you refer to. I think you will find that it fully explains how to prevent oats getting at the birds in aviaries, and also how to fix up double netting for the purpose.

HEN NOT SITTING.

Novice at Breeding.—The probability is that the hen had not completed her clutch with the third egg, but had an interrupted egg laying period, or what has been termed "a broken eggery," which is due to no fault in your management, but is one of those aberrations which cannot always be avoided. If this surmise is correct the hen has probably laid other eggs by the time this appears, and commenced to sit in the usual manner. In that case allow her to go on and sit her full time on both sections of the clutch—the three first eggs as well as the later ones laid—as there will be just a frail chance of some result accruing from the first eggs laid, though the chance is certainly small if she had not commenced to sit properly by the end of a week after the third was laid. If events have not turned out in this manner, you can do nothing to force the hen to settle down to sit in a normal way, but as she sits on the nest at night you might even then let her go on in her own way for the usual length of time necessary for the eggs to hatch, to see if she becomes more broody as time passes. Many surprises are obtained from the fickle behaviour of such hens as this, and I would not quite lose hope until a full fortnight had passed. Then you might test the eggs by a strong light and discard them only if they have the appearance of being unfertile, or if the hen has not settled down. If discarded, treat the hen as advised for backward hens in "Canary Breeding for Beginners," and let her go to nest again with the Canary in the usual course, when she may do better, and there will still be plenty of time afterwards to mate her with the Linnet to try for a brood of Mules.

LUMPS ON BODY.

Novice.—Sorry I cannot be of more real assistance to you, but it is not possible to give any really satisfactory advice in such a case as yours without a personal examination of the bird. The smaller swellings about the sides may be a rather simple matter, but the larger one on the abdomen seems to point to some possible internal displacement, or if the hen was mated and coming forward for laying it is also quite possible that this is due to something having gone wrong with the ovary. Altogether, if it is a valuable hen your best course would be to show it to a veterinary and ask his advice. Otherwise, I will venture to advise only the following course of simple treatment for a fortnight to see its effect, which, even if it is not beneficial, is not in the least likely to prove harmful. Leave the large swelling on the abdomen severely alone, carefully prick the smaller ones on the sides that appear to contain fluid and gently press out the contents, and then just touch the spot with the tip of a small feather dipped in tincture of iodine. The others that are hard paint slightly with the feather dipped in the iodine every third day during the fortnight without any previous pricking. Give the bird a morsel of bread and milk sprinkled with maw seed every second day, and on the alternate days add to the drinking water ten drops of lemon juice and as much Epsom salts as will cover a sixpence. Report result at end of a fortnight, repeating full particulars of your feeding and treatment generally, and the symptoms shown by the bird, besides the appearance of those swellings.

ITEMS ON MANAGEMENT.

Beginner.—(1) I am afraid I do not quite follow your description of the proposed alterations to the aviary, or room you are converting into one. If you could manage to send a small sketch, no matter how rough, it would help to make things more clear and understandable, and I would do my best to assist you in any way I am able. In a general way I can only now say that it would be quite correct to set apart the one portion of the aviary for the accommodation of the youngsters after they were able to do for themselves, but prior to turning them into the aviary you would be well advised to let them have a week or fortnight in a large breeding cage or flight, so that they may get a little accustomed to the use of their wings before they go into the larger space, where the use of the wings would be more essential. The general principle of keeping the breeding pairs in breeding cages and drafting the young into the aviary as the season progresses is quite correct, but I could only enter into the details of the arrangement with a more clear knowledge of the matter than I am able to gather now. (2) It is quite possible to get the maximum of fertility and results from both methods, so that one can scarcely say that either cage or aviary breeding is quite the best in these points. In aviary breeding, where it is not advisable to have an equal number of sexes, one can use a smaller number of cocks and still get the maximum results from a given number of hens, so that in this way, perhaps, one would consider the results better than if a larger number of cocks had been employed. It is very much a question of individual management. (3) The time when the young are able to be taken away from the parents and put on their own will vary from about 21 to 30 days old. Much depends upon the attention the parents have given them. The only safe plan is to leave them with the parents until they can pick up the egg food quite freely, and are beginning to nibble at the summer rape and canary. In any case they should be able to support themselves at a pinch on the soft food, which must be continued regularly until they are cracking and eating canary seed quite easily. (4) Jeyes' Fluid, or Izal, or any similar carbolic preparation is about the best disinfectant you can use for general purposes about the room. Add a tablespoon to the water, using for scouring, etc., or washing out cages, as directed on the bottles, and if red mites should become troublesome you may touch the joints of doors, etc., with a small camel-hair brush dipped in the strong fluid once or twice a week. (5) There is no special form of feeding to prevent egg-binding in the hen, neither is such a course at all necessary if the hens are in a good healthy and normal condition. The best preparation for the season is to give the hens a pinch of niger seed twice a week all through the latter part of winter and early spring, and when they are mated keep the floor well strewn with a good calcareous grit, and see that they have access to a supply of cuttlefish to nibble at.

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Battye's "Yorkshire Canaries" (1/1½); House's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Ramsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

BREEDING WITH DOVES.

Discharged Soldier.—In its nesting habits the Turtle Dove is somewhat different to the Wood Pigeon, frequently building in tall bushes and high hedgerows. It is mostly single-brooded, but will generally nest a second time if the first eggs are destroyed or prove unfertile. (1) They build their own nest, using thin twigs, which they weave together in a basket-work, neat and rather slight in structure. (2) They will only nest in the summer. (3) The eggs are two in number. (4) A cage or small aviary less than 6ft. in length would be useless, and if you can manage a larger one, so much the better. (5) The food should be small grain, such as peas, wheat, shelled oats, tares, etc. To be successful with them in captivity give them as much room as possible, with the cage or aviary so arranged that the floor can be easily cleaned or scraped out without frightening the birds too much. Fix a bundle of twigs in one corner and mat together a handful of the smaller ones into a rough resemblance of a nest to encourage them to build. They should be freely supplied with fresh water.

BREEDING WITH COCK BULLFINCH.

Bullfinch-Canary.—Your letter is particularly interesting because you appear to have accomplished what a good many fanciers have failed to do; that is, breed from a pair of Bullfinches in a cage. I do not gather from your letter that he was also the father of your Bullfinch-Goldfinch. If he was not and the Bullfinch parent of the Hybrid was a hen, then you are not quite correct in calling it a Bullfinch-Goldfinch—it should be Goldfinch-Bullfinch. I am somewhat surprised to hear that the cock Bullie feeds both a hen Canary and a hen Greenfinch. As a rule, the Bullfinch takes generally to one partner only. Now about your breeding with both hens. I should advise you to run him with the hen Canary first, because she will no doubt go to nest first, and then when she has laid you can put him in with the Greenfinch and shut them off by themselves. With a little luck you should succeed, although Hybrid breeding is full of surprises. But, personally, I think no reasonable cross impossible. We have now crosses that were never attempted years ago, and there are still more to follow. As regards your Hybrid, I am inclined to think it is a highly-coloured hen, and if you thought of trying to breed with it, a Goldfinch would be its proper partner. I say proper partner because Mules have been said to breed paired to one of the parents or a bird of the same species as one of the parents, but I never yet heard of a case of a Mule having fertile eggs when paired to another Mule. I hope you will succeed with both your attempts, and if so, I should like to hear later on the results.

BRITISH BIRD & HYBRID QUERISTS

should consult Boulton's great work, "Cage-Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hardbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.) or the "Nutshell" booklets (2½d. each); No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them" No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

'CAGE BIRD HYBRIDS'

THE STANDARD WORK ON THE SUBJECT.

By Chas. Houlton. Price 7s. 6d. net.

"CAGE BIRDS," 154, FLEET ST., LONDON, E.C.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

GREY PARROT IN INDIFFERENT PLUMAGE.

R. W.—Try your bird with a few oats mingled with the sunflower; give ripe fruit daily, also nuts. Keep cuttlebone, Parrot grit, and a chunk of wood (for mandible exercise) continually in the cage. It can also have dry toast, biscuit, bread, and a little plain cake; raisins and dates are also good. If it insists on having the toast, etc., moistened, then moisten it with a tepid solution of chemical food, and water, but not with tea, coffee, or milk. Lightly colour the drinking water with chemical food, and once a week, in lieu of the chemical food, put one teaspoonful of fluid magnesia in the water. Do not give a bath till weather is warmer, but, choosing warmish days, spray it twice a week (use a Mist sprayer) with tepid water, containing a little Condy's Fluid. If you keep windows and door shut till its plumage is quite dry, there should be no risk of the bird taking a chill. About noon is a good time to spray it, as that is usually the warmest part of the day, but during any sunny period should be quite safe.

DIFFERENCE BETWEEN PANAMA AND BLUE-FRONTED AMAZONS.

A. Brandt.—The Panama Amazon (Chrysotis panamensis) is a yellow-crowned Parrot; body plumage mostly green, lighter on the underparts, and pencilled with black; flights blackish; wing shoulder and speculum red; tail green, broadly yellow-green at the tip with a red spot on the outer feathers; beak, yellowish, with leaden tip; total length, 12 inches, of which the tail measures four. I am not acquainted with the talking capacity of the Panama Amazon, but usually a bird should begin to give evidence of talking capacity within a few months of its having become tame and steady, though no hard and fast rule can be laid down in this respect. You will, of course, have to teach it, by talking soothingly to it when feeding it, etc., and also teach it by the constant repetition method. It should also pick up words, cries and calls it hears uttered in its vicinity. But you cannot look for any progress before it is thoroughly accustomed to you and fairly steady.

FOREIGN BIRD QUERISTS

should consult Page's "Foreign Birds for Beginners" (1/1½); Arthur's "Budgerigars and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 14 "Gouldian Finches," No. 16 "Avadavats," No. 17 "The Grey Parrot," No. 18 "Budgerigars," No. 19 "The Pekin Robin," No. 20 "Warbills." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

SAMPLES OF GRIT.

K. K.—The sample of grit I consider a very good one, and quite safe; should have no hesitation in using it myself in either cage or aviary. If the sample sent is a fair sample, as to size, etc., of the bulk, it is a very satisfactory one.

OUTDOOR AVIARY AND WHAT TO KEEP.

Little Jap.—The fault of your aviary is its shallow depth; in consequence of which, I fear, in wet weather it will be very damp and wet from driving rain. The minimum depth really ought to be three feet. However, I have no wish to discourage you, and success with your Budgerigars is by no means improbable. I do not consider you ought to have more than four breeding pairs in it. (2 and 3) Cockatiels are certainly a striking contrast to Budgies, and though larger, usually agree well with them; they should breed, as also should Black-cheeked Lovebirds, if you got a pair of each as quickly as opportunity permits; you should then have a very attractive and interesting lot, all of which thrive on practically the same diet and treatment. All these should survive all the year round out of doors. You would do well to take the precaution of standing some kind of screen in front of such an aviary, during periods of driving rain; also at night a blind would be an advantage, or cats clinging to the front might very badly scare, if they did not succeed in maiming them.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation he infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away,** and if a fee is enclosed the loss will be the sender's.

H. Lerafes, Romford.—Death arose from impaction of the bowels; the diarrhœa you mention was brought about by irritation of the bowel wall behind the impaction. The skin disease had no connection with its illness, nor is it contagious.

GENERAL.

Answered by THE EDITOR.

MULES OR HYBRIDS.

Difficult.—The terms are merely fanciers' expressions. Mules are Hybrids, of course, being bred between two distinct species, but all Hybrids are not Mules. In fact, the dictionary meaning of the word Mule is the offspring of a horse and an ass, whereas Hybrid means any animal or plant produced from two different species. By long usage, however, a Mule is understood by fanciers to be a bird one of whose parents is a Canary, and a Hybrid is a bird which has not a Canary on either side of its parentage.

LADIES!

WOOD'S CHALLENGE REMEDY

Is guaranteed under the sum of £100 to cure when others fail. Far superior to Pills, Pellets, or any Continental treatment. For all cases of irregularities, however obstinate, CHALLENGE REMEDY is supreme. Price, 3/-, 5/-. Special, 12/-. Stamp for Advice. Est. 30 years.—**MR. & MRS. A. K. WOOD, Medical Specialists, 20, Louis St., Leeds.**

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show-bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER. Compiled by G. K. WESTON. The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 5/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

"THE SMALL GARDEN." The Book of the Moment. How best to utilise small space, simple but complete instructions for the novice gardener, especially for the amateur who wishes to turn a little plot of land to good advantage. List of vegetables and flowers. A most valuable little book for all who wish to grow their own food. Price, 7d., post free.

"EVERY WOMAN'S BOOK OF POULTRY." By the Hon. Mrs. Lionel Guest. Most favourably-reviewed book of poultry for the season. The problem of the food supply is a great and growing one. The author writes delightfully and instructively on a subject of which she has made herself a perfect mistress, and the result is a book that can be cordially recommended to every woman who can and ought to take up the industry. Price, 8d., post free.

A COMING CHAMPION.

The beautifully marked Song Thrush here shown is the fine specimen which won 1st Prize at the recent Llanelly Show in a strong class. It was described by the Judge as "a grand bold Thrush of rare size and shape, and beautifully spotted." The occasion was the first time of its being shown, and as it matures it will doubtless win many more honours for its owner, Mr. E. Cole, of Llanelly.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit system should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

MEDICINES.

NON-FEEDING HENS

Smith's non-feeding hen medicine has proved a boon to hundreds of fanciers; one writes, "Lost 15 out of 16 young birds before using, since have reared 16 out of 18. Going-light medicine also a marvel." Bottles 8d., 1/2, 2/-, post paid: Smith, 73, Audley-st., Reading. (924)

Soft Moult—Not Singing

Wanted, a trial; we are confident our medicines will give satisfaction. Ditchfield's Tonic Drops are a guaranteed cure for soft moult, going light, dullness, feather plucking, not singing, diarrhœa, and inflammation of the bowels. For birds that are stuck in the moult and for moulting British birds, this medicine is invaluable. Sold in 8d., 1/2, and 2/2 bottles. For bronchitis, wheezing, hoarseness, and inflammation of the lungs, get Ditchfield's Special Lung Tonic, also in 8d. and 1/2 bottles. The grandest medicine ever introduced for chest and lung affections in cage birds. As an advertisement, we will send a 8d. bottle of each medicine for 1/2, or two 1/2 bottles for 1/11. All medicines post paid at our risk. Also two valuable seed recipes, how to feed Linnets and Rollers for contest singing, given free to all purchasers of our medicines.—FRANK DITCHFIELD, Bird Specialist, OLDHAM.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

FRED ALLEN, BRITISH BIRD CHAMPION.

There are now a lot of British bird experts, etc.—in fact, quite an army of them—so I ask them all to gather around and listen to the acknowledged British bird champion. I do not state "loud, fierce, contest singing Linnets at 1/6 each." Such offers are merely to catch the novice. I have the finest strain of song in England (see my £1,000 offer of last week). I have also judged thousands of birds and won hundreds of prizes. I do not copy adverts., therefore all intending purchasers cannot do better than place themselves in my hands. I have thousands of unsolicited testimonials, and two large batches have been sent to the offices of "Cage Birds." All my birds are on approval for cash or deposit. You cannot get any better than the best, and I have the best; moreover, I am patronised by all the leading fanciers in England, also by Sir Luke White, Sir J. Dewar, Walton and Walton, Vesta Tilley, Dr. Brodie, Pat Rafferty, Florence Smithson (the noted songstress), and many other stars. I sold last week 198 small Foreign birds before my advert. was 18 hours old. Every birdy man knows Fred. Allen, of Hull, so why delay I have a grand lot of beautiful singing cock Linnets, running and turning their notes, and all taught under my undefeated cup winner, **2/-, 2/6, 3/6, 4/6** each; quality songsters that can put three and four ways together, guaranteed, **6/6** each; these are right for teaching young Canaries or Mules. A good cage given with these just as an advertisement. House-moulted contest Linnets, that have won all before them, **8/6, 10/6, 12/6**; and a few that cannot be stopped, **15/6, 20/-** each. Everybody welcome to hear them. Please note, I do not tell visitors I have sold them; I always have over 50 proud birds in stock, and ten of these I use for training. I have 14 extra large cock Hawfinches, with good bibs, **8/6, 10/6** each; also one stormer, **15/6**. Monster yellow cock Greenfinches, the right kind, **2/6, 3/6** each: Chaffinches, like paint, **2/6**; cock Bramblefinches, real gem, **2/6**; cock Siskins, **7/6** each; cock Thrushes, real good, **3/6, 5/6** each; Linnet and Roller whistles, **6d.** Try a bag of my Secret Mixture, **1/3**; Lark, Thrush Food, best in England, 7 lbs. **2/-**, carriage paid.

TALKING PARROTS.

The largest and choicest stock of talking Parrots in the North; no common Rocks offered here, advertised as Red and Green Parrots (red beak, etc.) Clear at a gift. I offer talking Amazons and African Greys at **40/-, 45/-, 50/-** each. A few extra good talkers at **£3, £4** each; one extra good Grey, always talking, **£5**; also one of the best talking Amazons in a cage, **£4 10s.** Rosella, quiet, tame, kisses, etc., **30/-**; large Lemon-crested Cockatoo, **50/-**. I have scores of other birds, so write at once to the Original. Travelling boxes **3d.**, cost of carriage **6d.** extra.—**FRED ALLEN, England's Leading Specialist, 156, Porter Street Aviaries, HULL.** (956)

CANARIES.

"EVERYBODY'S"

Series of Popular Handbooks.

Everybody's Book of the Navy.
Everyone realises the vital part our Navy is taking in this great war, in keeping the seas open for our food supplies, guarding our shores from invasion, and protecting our soldiers as they cross the seas.

"EVERYBODY'S BOOK OF THE NAVY" traces the growth of our splendid fleet from its earliest days, giving a "Chronological Summary of Naval History" up to 1840, and the enormous progress made since the advent of iron and steam. A large number of illustrations show the various transformations which battleships have undergone. Another section is taken up with short descriptions of the famous naval battles which have taken place, and the equally famous men who directed them.

Sea terms in general use, signals, flags, and salutes all find their place in this little handbook.

The section on "Machinery and Structure of a Super-Dreadnought," guns and gunnery, the torpedo, torpedo-craft, the destroyer, the submarine, wireless and aircraft, is particularly interesting just now, and should prove very instructive reading.

The last chapter on "The Present Navy" contains a tabulated list of our ships, the Colonial Fleet, the Admiralty and Naval Administration, the cost of the Navy, and other information which all should make themselves acquainted with.

This little book is obtainable for the small sum of 8d. post free from the publishers,
Brindley and Howe, Ltd., Fetter Lane, London, E.C.4.

English Wit.
Do you want a book that you can pick up when you have a few moments of relaxation in these busy days? A book to make you smile and forget worry and care and anxiety for a little while?

Then procure at once a copy of "EVERYBODY'S BOOK OF ENGLISH WIT AND HUMOUR," and you will think the money well spent.

It is only 8d. post free, but it is worth infinitely more; get it and see.

When you have finished with it pass it on to a soldier or sailor friend. They are always eager for something to read, and doubly welcome anything humorous to relieve the monotony of their everyday life.

Don't hesitate. Send 8d. (or 1s. 2d. for a copy bound in leatherette) to-day to the Publishers, Brindley and Howe, Ltd., Fetter Lane, London, E.C.4, and you won't regret it.

Everybody's Gazetteer and Atlas.
It is practically safe to say that everyone has relations or friends serving their country on one of the battle fronts or on the ocean. The war area now covers such a large portion of Europe, Asia, and Africa that it is impossible to keep "au fait" with the movements of the troops without maps and a gazetteer to refer to.

"EVERYBODY'S GAZETTEER AND ATLAS" is a handy little volume of up-to-date, useful information, containing maps, table of distances between principal ports in all countries, index of the countries of the world, showing area and population of each.

Places hitherto little known have come into prominence through the war, and this little book will give the reader at a glance the knowledge he is seeking.

It is a small volume, compact, and neatly bound in leather cloth, price 8d. post free, or 1s. 2d. bound in leatherette, from
Brindley and Howe, Ltd., Fetter Lane, London, E.C.4.

Medical Guide.
Nowadays, when so many doctors are on the various battle fronts attending to our wounded and sick, or on the staff of our hospitals and nursing homes in this country, it stands to reason that those medical men who are trying to "carry on" among the civilian population are overworked, and cases of serious illness take precedence over the little ailments and accidents of everyday life.

Under such circumstances it would be a great relief to be able to turn to such a handy little book of reference as "EVERYBODY'S MEDICAL GUIDE," which gives valuable information on burns, sunstroke, sprains, whooping cough, poisoning, mumps, colds, coughs, etc., etc.

This little volume also contains information on "Laws Relating to Infectious Diseases," invalid dietary and drinks, weights and measures, a chapter on physiology, antidotes for poisons, symptoms of diseases, and hints of various kinds useful in a sick room.

From this brief summary of the contents of the book you will readily realise how invaluable it would be to have it within reach in case of emergency, and when you can procure it for the small sum of 8d. it is not worth hesitating over. So send for a copy now to Brindley and Howe, Ltd., Fetter Lane, London, E.C.4, (8d. post free, or 1s. 2d. bound in leatherette).

Gardening.
Just at the moment Gardening and the practical cultivation of land for food growing is filling a large place in the minds of all. If you are digging and doing your bit on the land you will find "EVERYBODY'S GUIDE TO GARDENING" a most useful and fascinating volume. It is indispensable to the amateur. It contains chapters on the cultivation of fruits and vegetables for every season of the year and every kind of garden. It is copiously illustrated, written by an expert, and is free from that prosiness and indulgence in Latin names to which the average gardening expert is so prone. Here are just a few of the chapters:—

Practical instructions as to how they may be propagated by Seeds, Layers, Cuttings, Buds, and Grafts.

The Best Soil—How it may be tested and prepared—Manures and Plant Foods—the Value of a Hot Bed; How, When, and Where it should be made.

The Kitchen Garden and its Construction.

The Best Fruits and their Cultivation, with the aspect and soil they require.

The Best Vegetables, and how to grow them for a succession.

Summary of work required in the Fruit, Flower, and Vegetable Garden during each month in the year.

Yet these chapters represent only a tithe of the valuable and brightly written information contained in this work.

Neatly bound in serviceable leather cloth, price 1s. 2d., post free.

Brindley and Howe, Ltd., Fetter Lane, E.C.4.

Dressmaking.
Every woman, at some time or other in her life, has attempted to make a blouse, and probably, after one or two failures, has given up trying, considering it a waste of material and time.

Now, when we are urged on every hand to economise, and women are asked to wear their old clothes and save money, is the time to make use of the materials we have on hand, and renovate the clothes we possess to freshen them and bring them up to date.

Any woman who is hesitating about doing this for herself, in case she spoils the garment, should get a copy of "EVERY WOMAN'S GUIDE TO DRESSMAKING."

If the directions in this book are followed it would be impossible to go wrong. They tell you just what you want to know and how to set about doing it.

This book also contains chapters on Rest and Dressing Gowns, Making of Underclothing, Children's Underclothing, a Schoolgirl's Clothes, Baby Clothes, on the Care of Clothes, Dressmaker's Stitches, in addition to those on general dressmaking.

Every woman should write at once for a copy of this book, and when she has glanced at it she will be impatient to start work under its directions. Write to-day to the publishers, Brindley and Howe, Ltd., Fetter Lane, London, E.C.4., and enclose 9d., and you will receive a copy by return post free.

Book-keeping.
Every day it is being more clearly recognised how important it is for everyone to have a knowledge of book-keeping.

Women are in some cases carrying on their husbands' businesses while they are away serving their country, others are taking men's places in offices, banks, and other branches of commercial business, and in all these cases a knowledge of book-keeping would be of inestimable value.

Apart from the necessity of keeping accounts in business, every woman would find it a great help to be able to keep her housekeeping and personal accounts in proper order. She would be able to see at a glance where there is greatest expenditure or leakage, and it would act as a check to extravagance.

This knowledge is within the reach of all by sending 8d. for a copy of "EVERYBODY'S GUIDE TO BOOK-KEEPING." For 1s. 2d. you can get it neatly bound in leatherette.

Get it now and start right away to obtain this information, which will save you time and money. Brindley and Howe, Ltd., Publishers, Fetter Lane, London, E.C.4.

(d. each (8d. post free), strongly bound in cloth, 1s. each (1s. 2d. post free), in attractive leather binding, or ANY SIX FOR 3s. (in cloth), or 6 for 6s. post free if leather bound.

It is only necessary to state the NUMBER of each book as given opposite the name in the list shown here.

Club Reports.

MOUNTAIN ASH F. & F.S.

Meeting May 12. Decided several important matters in connection with open show Aug. 2. Any fancier wishing to guarantee classes please communicate with sec. Next meeting May 19, Napier Hotel, at 6.30.—Geo. H. Rowlands. Hon. Sec., 9, North-road, Cardiff.

ALFRETON C.B.S.

Meeting, Red Lion Hotel, May 12; Mr. Adnitt, chair, and a fair attendance. Classes for P.N. show drawn up as follows:—Champ. Nor. yell., ditto buff, Yorkshire yell., ditto buff. Novices, same classes; also two British classes. Birds to be staged by 5.30 instead of 4.30. 1/3 on first cage; 1/- spl. on each class. Mr. B. Simpson to judge. Fanciers are not having very good results over first round.—Geo. Sawer.

WALLSEND (Mid-Tyne) C.B.A.

Owing to my working overtime on May 9, our meeting was not held. I sent the books to our chairman, but he also was working. On behalf of our chairman and myself, I wish to express regret that so many of our members came down and there was no meeting. I am calling a meeting for May 23 at 7 to elect judge for nest feather show, and to draw up schedule, and also to hear the breeding results up till now.—Geo. Greenwell.

SHEFFIELD C.B.S.

Meeting May 3, Wentworth Cafe, Mr. Hemming chair. Unfortunately, Mr. Waters was not present, but had forwarded his paper on "Size, and How to Produce it," which was read by the secretary. The paper was well prepared, and contained beneficial information. A general discussion ensued, and a vote of thanks was accorded Mr. Waters. Messrs. Blaney, Hewitt, and Parkin elected members. Next meeting June 7; table show of young birds; fixed prize-money.—E. Sisson, Assist.-Sec.

ABERTILLERY C.B.S.

Meeting May 12, Prince of Wales Hotel, Mr. Wm. Cooper presiding over a very good attendance. New members elected: Messrs. G. Fowler, R. Thomas, and Wm. Clothier. It was good to see old members turn up, but there are other old members we should be pleased to see attend more meetings. There are specials for every class in F.F. show July 7, Mr. H. H. Mortimer's to be an extra special. A very pleasant evening was spent. New members will receive a hearty welcome. The society is open to Monmouthshire.—J. Webber, Hon. Sec.

NORTH-WEST GLASGOW C.B.C.

Meeting Unionist Rooms, 308, New City-road, May 8, Mr. W. Lonn, V.P., presiding over a fair turn-out. New members admitted: Messrs. J. Hamilton, A. Maxwell, and J. Park. Decided to hold a ramble on Saturday, June 16, to notify the members when arrangements are completed. Judges for annual show were elected, and their names will be published on receipt of acceptance. Sec. read a paper (written by a friend), entitled "Breeding for Colour," which proved very interesting and instructive, and which was followed very attentively by the members present. A vote of thanks to the writer of paper, and to the chairman for presiding, brought a pleasant meeting to a close.—P. Houston.

SPRINGBURN, POSSIL PARK.

Meeting and show of British, Reid Hall, Queen's-hill-street, Mr. J. Swan (pres.) in the chair. Classes were fixed for F.F. show, and judge elected. New member admitted, D. Fyfe. There was a good turn-out of British. Mr. Jas. G. Adams, Maryhill, judged, and was accorded a hearty vote of thanks. Light Mule or Hybrid: 1, sp., Fyfe; 2, sp., Brooks. Dark: 1, Fyfe; 2, Brooks. Bramblefinch: 1, sp., Swan; 2, sp.. 3, Crawford; 4, Hamilton. Chaffinch: 1, 2, Crawford; 3, Hamilton. Bunting: 1, sp., 5, Hamilton; 2, sp., 4, Crawford; 3, Swan. Large or Small British: 1, sp., sp. best bird, Crawford. For.: 1, Swan. A hearty vote of thanks to the chairman brought the meeting to a close.—A. Hamilton, Sec.

BLAYDON-ON-TYNE C.B.S.

Meeting, smoke room, Wesleyan Chapel, May 5. Mr. P. Lynn presided over a good attendance to hear Mr. G. Dobson lecture on the feeding of his birds throughout the year. After the lecture questions were asked, and he answered them to the satisfaction of all. Decided to hold a Nest Feather show June 30, classification to be made at the next meeting; it was left in the hands of Mr. G. Dobson to elect a judge; also decided that G. Dobson and G. Simpson look for a room in the meantime, and report at next meeting. New member elected, Mr. Eagle. Sec. was instructed to get rules printed, and these will be forwarded to all members as soon as received. Mr. J. Carr was elected auditor.—J. J. Walker, Sec.

WELSH C.B.C.

The annual general meeting will be held at Great George Hotel, Cross Street, Abergavenny, June 9, at 3 p.m prompt, when the accounts for the year will be presented and the election of new members, of which there are eleven, will take place. Who will make up the round twelve? Officers and committee for the year will be elected, and presentation of cups and medals to successful members will be made. Patronage to the various shows will be considered. Societies please send in their applications before June 5. Notice of protest against the winning of one of the cups has also been received; also it will be proposed that when a novice has won his championship the points obtained in novice classes should count for champion section. As it appears to be an important and interesting meeting, it is hoped that all possible will be present. Will members send on their subscriptions, which are now due.—D. H. Tedstone, Hon. Sec., 5, Struet, Brecon.

STOKE-ON-TRENT C.B.A.

Meeting May 7, Victoria Hotel; the turn-up of members was a true reflex of the business of the evening. The fixing of date, judge, and classification of N.F. show. It transpired that members had experienced a poor first round, and it was thought advisable to postpone the fixing of date until June meeting. Last year's classification was adopted with the addition of two old-bird classes. The matter of special prizes was discussed, and sec. reported that as requested he had made enquiry at the office of CAGE BIRDS re diplomas, and was informed that the issue of these had been withdrawn probably until after the cessation of hostilities. Decided that the society shall offer two gold-centre silver medals for competition provided the members subscribe sufficient to provide two further silver medals. Chairman criticised members for lack of interest; let his remarks stimulate members to further efforts so that a good muster may accrue at the June meeting.—J. Glover.

PLUMSTEAD AND WOOLWICH.

Meeting, May 8, Trinity Schools, Borgastead Street, Woolwich, Mr. Newnham in chair. Mr. Robson gave his lecture on Mules and Hybrids, which was well received. Questions were asked and answered. A vote of thanks to Mr. Robson brought an enjoyable evening to a close. Decided to hold young stock show, July meeting night.—G. H. Macmillan, Hon. Sec.

DURHAM CITY C.B.S.

Meeting, May 5, Grapes Inn, Mr. Robson presiding. Decided that owing to the poor report of young ones among our members, that our Nest Feather show be postponed until August 11, with Mr. Notley, of Hetton, as judge. Sec. was instructed to write Mr. A. E. Priest, who has been seriously ill in Newcastle Infirmary, expressing the sympathy of the members and wishing him a speedy recovery.—H. Briggs.

STOCKTON C.B.S.

Meeting, May 4, "Little Regent," J. Yeates, chair, and only a poor attendance. Still we are progressing as favourably as can be expected. Three new members enrolled: Messrs. Price, Watts, and Jordan. Our secretary, T. Carlisle, having joined the colours, his place is ably taken by F. Stothard. We regret to announce the death of one of our members in Mr. Clarke, and a vote of sympathy with his family was passed. In future meetings the officials would like to see more members take an active interest in the work, and not leave all to two or three.—Wm. Kitching.

CRYSTAL PALACE AND PENGE.

Meeting May 9, Alexandra Hotel, Penge, Mr. Last chair. Members supplied with 30lbs. of Ramsden's pepper; there will be two specials, given by Mr. Ramsden under printed conditions, for best-coloured bird. An interesting lecture was given by Mr. J. Robson, "Rearing of the Young." He took us through the whole routine from his own personal experience, and then asked for questions, which were showered upon him by very nearly every member owing to the bad season we are experiencing. A vote of thanks to the lecturer closed an instructive evening.—W. D. Fryett.

NORTH LIVERPOOL C.B.S.

Meeting, Headquarters, May 2, Mr. E. Battersby, chair. After a discussion re classification for forthcoming shows, it was decided that the usual classifications be adopted, with additional classes for foul varieties, and a section for junior champions. It was contended that a good foul bird had not an equal chance with a good self in mixed classes. Decided to invite Mr. Bell to judge the first N.F. show, June 6, along with Mr. Mallinson, in place of Mr. F. Handley, who has left the City. Mr. Worral (Bootle) enquired if the night shows could not be concluded earlier, and it was decided to complete benching birds at 7. Nomination of new members approved, Mr. Bunner nominating another for next meeting.—H. Holden.

LEEDS C.B.S.

Meeting, May 5, Griffin Hotel, Mr. T. Baldwinson chair. Decided to ask Mr. F. King to judge October table show, and Mr. W. Hall the June F.F. show. The advisability of holding open show was discussed, and it was decided to leave the matter over till next meeting for settlement. Messrs. H. Walker and A. Jackson were elected members. Table show of British was held. Special best bird, Mr. G. Colborn, with a topping Greenfinch. Most points, Dr. Cummings. Mr. J. Burnell judged, and gave general satisfaction. Linnet (9): 1, Dr. Cummings; 2, 4, Mennard; 3, Smith; vhc, Colborn; hc, Saul; c, Fisher. Redpoll, etc. (12): 1, 2, hc, Dr. Cummings; 3, vhc, Mennard; 4, Colborn; c, Fisher. Goldf. or Bullf. (11): 1, 4, Dr. Cummings; 2, 3, Smith; vhc, Sanderson; hc, Fisher; c, Colborn. A.O. Hardbill (12): 1, sp, Colborn; 2, Sanderson; 3, vhc, Fisher; 4, Mennard; hc, Dr. Cummings; c, Saul.—W. A. Wilson, Hon. Sec.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Yorkshire Union of C.B.S.—May 19, Oddfellows' Hall, Thornton Road, 6.45. To hear sub-committee's recommendation re standards, etc.; ballot for judges; and other business.—S. Midgley.

FEEDING AND WEANING YOUNG CANARIES.

By W. JONES.

Some notes taken by the hon. secretary of the Birkenhead B.B.A., Mr. H. Wakem, upon the occasion of a lecture by Mr. Wm. Jones to the members of the Society.

THERE are so many books published upon the breeding of Canaries that the various methods are apt to be confusing to the novice, so I will tell you just how I breed, feed, and wean them. Get your birds well fed and in good condition. Then pair them up. I use one cock for two hens, pairing him to the first hen until she has laid the third egg, and then turning him in with the second hen.

When the hen lays her first egg take it away and place a dummy one in its place, also a second dummy for her second egg. When she has laid her third egg take the cock away, clean out the cage, and give the nest a good dusting with insect powder. Feed the hen on nothing but good canary seed until the day before hatching, when you should give a little egg food. Start with the egg food as you intend to finish, not too rich, about two to three handfuls of biscuit food to one egg. I do not believe in only giving the yolk, I always use the whole egg.

When the young are four days old start with the green food. Dandelion is my favourite of all, and I give it daily, also hemp seed, whole, not crushed. Giving the seed whole keeps the hen off the nest longer, and gives the young ones a good airing which means life to them. At nine days old the young open their eyes. Don't give a clean nest unless the old one is very dirty, the insect powder will keep it free from red mite, and there is always the danger of the hen deserting her nest.

To Prevent Feather Plucking.

When the young are standing on the edge of the nest pan look out for the hen plucking. I don't say all hens do this, but many do to form their second nest. At this age I put rings on, placing the chicks in a nursery cage.

I use an old show cage, hanging it end-ways on to the breeder, door end outside, which makes it easy for feeding the young birds. You can either keep the hen's cage door open or shut, the nursery filling the space, but if the hen is inclined to pluck keep the door shut, the hen will still be able to feed her offspring.

Give the chicks plenty of egg food, and when you see them eating it, place them in a larger cage, a small flight or double breeder, away from the mother, and give crushed hemp, egg food, plenty of grit, dandelion, and a bath daily. On the bottom of the flight put chopped hay, chaff, or clean sawdust, but mind that no mice have been on the latter; mice dirt is poison to birds. Hang bits of string on the top of their cage, it helps to make them stand up and take exercise. Put the seed trough, filled with canary seed, on to their cage with a sprinkling of maw seed on top, this will induce the birds to crack the seed.

To finish my leeture I will give a few don'ts: Don't forget plenty of grit, soft egg food, green food, crushed hemp, bath, and drinking water daily. Never kill a spider in the bird room; he will help to kill the red mite for you, these are a great trouble if not kept down.

Nests of Birds, Poultry, &c., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite [illegible] to everything else.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Egg Foods and Egg Substitutes.

By F. Cole (East Dulwich).

(Continued from page 259.)

In the following lecture, given before the members of the Plumstead and Woolwich C.B.S., and the City and Suburban A.C.B., Mr. Cole shows how to economise on the food bill, and how hard-boiled egg may either be dispensed with altogether, or used in much smaller proportion than is generally deemed necessary.

THE firm I have mentioned also make a cod liver oil food which has an additional advantage. This food is claimed to rear Canaries without egg, and it seems to me quite feasible if used in conjunction with plenty of wild seeded weeds. I know it has been said that this oil will produce feather, but I have not found it so, nor do I see any reason why it should.

War Bread all the Better.

As a change of diet fresh breadcrumbs can be used instead of Spratt's food. This I have used with advantage, and in my opinion the introduction of the foreign matter into the flour now officially allowed will have a beneficial effect. The only question that occurs to me is that the baker may add to the bread some ingredient to make the bread rise more readily. However, I do not see much danger to our birds in this, because I have always held that what will not harm man will not harm animal. This also is not over-expensive, as the bread is always at hand, and pieces dried in the oven and ground can be used up. The fault, however, in this oven-dried bread is that it is difficult to add the water, and consequently less bread must be added to the egg, or we shall find that the food is what I term dusty.

The last sample No. 4, is made from lunch biscuits and egg. This, while being more pleasant in smell, is in my opinion too rich and costly. It will also be found to dry up quickly in the summer time, a serious disadvantage. While deprecating it, however, I must admit that the food when prepared in this way keeps sweet better in very hot weather, and some may for this reason consider it better for those who have to leave their birds for a long time unattended. Most of us, however, have someone who will look to the birds in the middle of the day. I have placed this sample last because it seems to me to be the most unnatural. Further, I have failed to obtain from it any particular benefit.

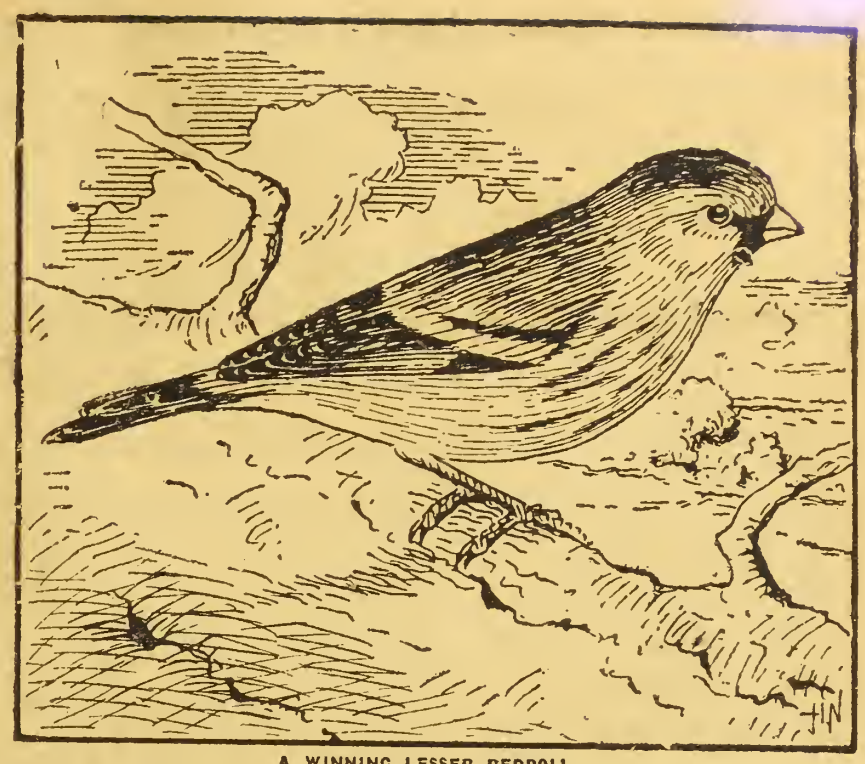
Egg Cake Too Expensive.

We have also often been told to use egg bread or cake for rearing in place of the fresh-boiled egg. I have been told this costs practically a farthing a teaspoonful. This is, in my opinion, too costly, and I cannot see that it is at all natural for our birds. Certainly they appreciate a small piece of sponge cake, and this forms a welcome change to soed for them in the winter time.

There is one more rearing material, and that is bread and milk. I usually prepare this by cutting the crumb of bread into cubes, slightly dusting them with sugar, and then pouring over boiling milk. When well soaked the surplus milk should be drained off and the bread distributed just as it is to the birds. I have used this at all seasons of the year, and I find the hens feed readily with it.

In conclusion, allow me to remind you that all the foods I have mentioned are good, but I find some are better. I am not going to tell you to choose the one that suits you best, but ask you to give them all a chance. Remember bread and meat are good for us, but we should tire of that. We like a change, so do the birds, and as we are on war diet so must they be. We shall not keep them short of food, but there must be no waste. If we bear this in mind during the season, and remember that there are other foods than egg and biscuit, just as nutritious, and just as readily sought for and fed to the chicks, then we shall have made one step forward in our hobby for the benefit of our birds and to our own material advantage.

It is the question of expense that hinders our hobby; the egg diet has many drawbacks, and I cannot help thinking it has been the cause of many breaking with the fancy. Bird seed is expensive, biscuits are almost prohibitive, eggs are difficult to obtain, and even they are, like the lodger's breakfast egg, only good in places. It does seem to me that, if we can find a substitute for eggs, we shall be doing our hobby a very great service. Let us endeavour, therefore, to eliminate them as far as possible from the bird's bill of fare, and by the judicious use of less stimulating foods we shall produce a more hardy and healthy bird and be troubled less with the sickly, non-feeding hen.



A WINNING LESSER REDPOLL.

This charming Lesser Redpoll is the property of Mrs. Lilian Dalton, West Cross, nr. Swansea. Among its numerous wins are 1st Prizes at Cheltenham, Bristol, Porth, Swansea, Llanelly, and Pen-y-graig; 2nd at Plasmarl show, and 3rd at Cardiff and Manchester.

A Linnet Hunt in the Snow.

By A. G. SHAND.

FOR four days it had been hard frost, and all that was wanted now for a successful day with the Linnets was a fall of snow. Then it came. Thirty-six hours of it, without wind, so that it was about eighteen inches deep when we set out, two of us, with our carrying box, which held the double nets, 36 square yards, pegs, pins, hammer and chisel to make holes, etc. Quite a load when one has to make his own road for three miles through virgin snow a foot and a half deep.

In Forres we are about four miles from the Moray Firth, and right along the shore the whins grow in great profusion, "the hunting ground" of the Brown Linnet, or, as he is called locally, "The Whinnock" and "Whin Lintie."

Where the Linnets Feed.

We are bound for a clear space we know about amongst the whins—a piece of waste ground where two farmers put the skelloch and other wild seeds from their threshing mills, to be away from their farms, and out of harm's way of their land. Here the Linnet feeds when the ground is hard with frost, and here we arrived at last, and set to work to clear the snow away sufficiently to set our nets, and show the wild seeds and earth. It is warm work making holes for the pegs in this iron ground, but it is done at last.

During the time we are doing it, the Linnets are flying about us, hunger making them very tame, landing almost at our feet, and flying up again as we move, the cocks calling and chirping all the time. The pull-line is adjusted, a trial pull given to see that everything is in working order, and we retire about fifty yards to give the birds a chance to get at the seed, which our nets will cover.

Others are coming up, and soon there is a big flock of different birds about. In about half an hour they have got accustomed to everything, and settled down to feed, and it is time for a pull, the birds are swarming on the ground. A strong, quick pull and the nets have worked like a dream.

We take out the Linnets first, and as quickly put the pick of the cocks into the carrying box. The others and hens we do not want, so they go free. Then the Greenfinches, about two dozen of them. We take three beautiful cocks, and let the rest away. Three Starlings also go; two cock Blackbirds follow. We keep two Skylarks and let five go. We shake the Chaffinches out of the nets—they are of no use to us—and try to count the catch placed in the box. We have thirty cock Linnets at the very least, all beauties.

We are satisfied, so pull up the nets, pack up, and again face a three miles walk through that beautiful snow, almost up to our knees, carrying a heavier but more interesting load than we came there with.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

BLACKBURN.

Open quality Linnet contest will be held May 26, at Empire Hotel, Bolton-road, Blackburn; several prizes will be given.—T. Hayhurst, Sec.—(Advt.)

SHEFFIELD.

Linnet sing, Sportsman Inn, Paternoster-row, May 13; 21 birds entered for three prizes; three minutes' time singing. Cutts broke all records, doing 156sec.; 2, Parlett, 128; 3, Jackson, 110.—Phillipson, Sec.

PONTEFRACT.

Woodman Inn Linnet sing, May 12. 1, W. Nelson; 2, Scotson; 3, Wilson. Also sing May 13. 1, Skidmore; 2, Scotson; 3, Foster; 4, Jones.—A. Wingham, Sec.

Woodman Inn, Pontefract.—All club sings will be on Saturdays; first pair up at four in the future.—A. Wingham, Sec.—(Advt.)

CASTLEFORD.

Castleford Potteries, Grey Horse Inn, May 14. Singing contest, 35 birds; 1, Watkiss; 2, Watson; 3, Nicholls.—J. H. Nicholls, Sec.

Linnet singing contest, George and Dragon, Bridge-street, May 13; 30 birds entered for three prizes, but there was only some poor singing. 1, Wainwright; 2, 3, W. Nelson.—A. Watkiss, Sec.

BARNSLEY.

Dove Inn Lark and Linnet Club Linnet sing May 13; 14 birds entered for four prizes; four minutes' time sing. 1, Jones, 3min. 25sec.; 2, Hardman, 3.16; 3, Norman, 3.6; 4, Fishwick, 3.4. Lark sing same date; 7min. time sing. 1, Hardman, 6min. 16sec.; 2, D. Fish, 2.53; 3, Coles, 2.42. Dunk, timer; Dickinson, chalker.—J. Hardman, Sec.

KIPPAX.

Kippax Linnet Club, headquarters, Commercial Hotel. Members sing May 12; 35 birds entered for four minutes' sing, and some of the best singing was heard that has ever been done at Kippax. 1, Cooper, 149sec.; 2, Plows, 107; 3, Potter and Collinson tied, 71. At sing off for 3rd prize Potter won. Timekeepers, O. Potter, R. Collinson; tappers, J. Liversedge, H. Collinson. 1, Cooper; 2, Plows; 3, Potter.—R. Plows, Sec.

LEIGH.

Globe Inn Linnet Club open contest May 5; 55 birds entered for time and quality singing. Quality: 1, Peet; 2 and 3, dead heat Statham and Rigby; 4, Bates. Time: 1, Alex. Donnelly, 143; 2, Brooks, 102; 3, 4, Peet and Aspey, dead heat, 51. Timers, J. Statham, I. Fairhurst; minutes, W. Meadows; judges, J. W. Jones, S. Rigby. Next open contest June 2, King's Head Hotel, Market-place, Leigh. Commence 3.30.—R. Disley, Sec.

LEEDS.

Contest Old Bird House, Albion Hotel, Saville Green; 43 Linnets sang for five good prizes May 13. 1 and 2 shared by "Bluche" Appleyard and Jarrow Robinson; 3, Ward; 4, Chippendale; 5, Towers. Judges, Grant, Hardcastle, Crane. Also evening contest; 23 birds sang for four prizes. 1, Butler; 2, Richardson; 3 and 4, O'Brien. Judges, Hayes and Crane.—T. Crane, Sec.

Open contest Glassmakers' Arms, Greyhound-place, York-road; 46 birds. 1, Marshall; 2, Richardson; 3, Hurst; 4, Richardson. Night, 22 birds. 1, Marshall; 2, Jarrer; 3, Hurst. Judges, Dearlove, Biss, Bomfield.—G. Marshall, Hon. Sec.

Linnet singing contest for quality, Clarence Hotel, Skinner Lane, May 13; 46 birds sang for four prizes. 1, Binns; 2, Summers; 3, Brown; 4, shared Binns and Hodgson. Judges, A. Butterfield, F. Wells. Timekeeper, C. Ward.—T. C. Summers, Hon. Sec.

HEALTH & STRENGTH

Deals with all kinds of athletics, including Football Wrestling, Boxing, Weight Lifting, Fencing Running, Ju-Jitsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c. to all readers EVERY THURSDAY, 1d. Sold Everywhere. Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

England.

Nov. 1.—**Blaenavon C.B.S.**—(Geo. Broome, 82, King St.)

Nov. 3-5.—**Leicester Hand-in-Hand C.B.S.**—(E. H. Hulse, 23, Hartington Rd.) J.R., C.H.

Nov. 9-10.—**Ardwick and Manchester C.B.S.**—(A. E. Thorpe, 28, Park Grove, Levenshulme.) J.R., H.W.B., J.B.

Nov. 14.—**Coventry O.S.**—(J. Kent, 91, Villiers St., Stoke, Coventry.)

Dec. 7-8.—**Barrow C.B.A.**—(D. McFarlane and M. Franter, 26, Lord Roberts St., Vickerstown, Barrow-in-Furness.) J.R., H.W.B., J.B., J.M.

Wales.

Oct. 24.—**Abertillery C.B.S.**—(J. Webber, Nant-y-Graig, East Side, Cwmtillery, Abertillery).

Oct. 27.—**Landore Plasmore C.B.S.**—(H. Fry, 22, Plasmarl Terrace, Plasmarl, Swansea.)

Nov. 10.—**Skewen C.B.S.**—(T. Pattinson, 177, New Rd., Skewen, nr. Neath, S. Wales.)

Nov. 15.—**Swansea C.B.A.**—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

Nov. 21.—**Maesteg C.B.S.**—(C. Williams, 247, Bridgend Rd.)

Dec. 5.—**Nantymoel, Ogmore Vale and Dist C.B.S.**—(T. Davis, 29, Clifton House, Oakfield Terrace, Nantymoel, Glam.).

Dec. 12.—**Aberdare C.B.S.**—(A. J. Evans, 24, Davis Street, Aberaman, Aberdare.)

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds

and Bird World.

Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, FLEET STREET, *London, E.C.4.*
Telegrams—"Aviculture, Fleet, London."
Tel. No. 5229 Holborn.

The Editor is always glad to receive and consider suitable contributions, whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on **one side** of paper only, must be authenticated with the proper name and address of the sender, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

I have resigned the secretaryship of the Tong and District C.B.S., writes Mr. W. Walker, and all communications must be addressed to the chairman, Mr. A. Gledhill, 51, Bertie St., Sticker Lane, Bradford.

The rule Book of the Halifax O.S. to hand, contains, besides a list of members' names and addresses, a full syllabus for 1917, comprising some interesting lectures and rambles. The full classifications for the Nest Feather shows and the four members' shows are also given.

We have received the syllabus for 1917 of the Leeds C.B.S. Besides the full programme for the year, it gives a list and particulars of the many specials that are to be won at the shows of the season, and the complete classification for each show. The balance sheet shows £10 19s. 5d. cash in hand, a slight decrease from 1916. A list of members and their addresses is included, and it is noticeable that quite a number of the names have the letters "O.H.M.S." (On His Majesty's Service)

We have received the rule book of the Midland Roller C.C. Besides the rules and list of members' names and addresses it contains the balance sheet for 1916, names of officers of committee, and the rules governing the winning of the challenge cup and novice cup. The balance sheet shows an increase in cash in hand [illegible] at end of 1915 to £14. 5d. at end of 1916. The increase is mainly due to profit of £11 7s 10d, made on [illegible], a very satisfactory result in these times.

[illegible] thanks on behalf of Plum[illegible] C.B.S. for reporting Mr. [illegible] which was given [illegible] writes Mr. Geo. [illegible] read by those who did [illegible] some idea of [illegible] the Fancy going till bet-

Birdy Rambles Arranged.

Members of the Halifax O.S., writes Mr. J. J. Dunn, sec., are having their first ramble on Saturday next, May 19, to Harden Woods. Members and friends are cordially invited. Train leaves Halifax at 1.50, and North Bridge 1.53; book to Wilsden. The leader, Mr. W. Parker, is one of the best; and, given fine weather, a treat is in store for all.

Members of the Halifax and District C.B.S. will ramble to Harden Woods, conducted by Mr. C. Pickup, on Saturday, May 26. Meet Halifax Old Station 2.40 p.m.; train leaves G.N. 2.50. Members and friends invited.

The first ramble of the Glasgow and Western Counties Norwich Canary Club for the season will be on Saturday, May 19, to Bridge of Weir. Train leaves St. Enoch's Station at 3.5. Members and friends to meet at corner of Argyle and Dunlop Streets at 2.45.

A Whitsuntide Ramble in the New Forest.

The Field Section of the National British Bird and Mule Club rambled on Sunday, May 15, from Harold Wood to Havering-Atte-Bower, the party leaving Liverpool Street Station by the 10.42 train. The return journey was from Gidea Park Station. About 32 specimens were noted, and some nests and eggs, the most prominent among them being the Tree Pipit, Yellow Bunting, Willow Wren, Jays, Turtle Doves, Spotted Flycatcher, Goldfinch, Tree-creeper, etc. This district seemed to abound with a large proportion of Chaffinches, and is also noted for its fine singing specimens of this species. Gentlemen desirous of joining the Whitsuntide ramble through the New Forest, leaving London Saturday afternoon, May 26, should send their names not later than Monday next to Mr. T. R. Trower, hon. treasurer, 442, Caledonian Road, London, N. The annual outing will take place on Saturday, June 2, to Gomshall and Shere. Fanciers and friends will be welcome.

I was pleased, writes Mr. E. Godley, Rishton, to see my Buff Norwich hen on the front of your valuable paper, CAGE BIRDS, which I have taken from its start and know its worth. For advertising there is nothing like it; I noticed one night when I was taking a few boxes to the station they were addressed to places as far apart as Aberdeen and Falmouth. I would like to thank Mr. Norman for the life-like drawing of my hen, but a little error crept in regarding her wins. She was first at Burton-on-Trent and Birmingham and second at Coventry and Gateshead as an unflighted bird, 1915, and first Birmingham and third West Bromwich 1916.

What a Reader Thinks

I feel I am voicing the sentiments of many, writes Mr. A. Gomersal, Brixton, when I thank you for keeping CAGE BIRDS going in these difficult times.

More Welsh Show Dates Fixed.

Abertillery C.B.S. will hold its annual show on Oct. 24, Skewen C.B.S., on Nov. 10, and Aberdare C.B.S. on Dec. 12. Secretaries should kindly note these and other dates in our "Show Dates Fixed" columns, in order to avoid clashing.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

ONE of the commonest of the weeds that will soon be attracting notice in all our cultivated land is the wild mustard or charlock (Brassica Sinapis Vis.), a weed which has long been amongst the most troublesome with which the farmer has to deal. It springs up about his fields in the most unexpected places, and unless a relentless warfare is immediately carried on against it, it quickly establishes itself in the most dangerous profusion, and causes untold damage to the surrounding crops.

It is, therefore, chiefly in neglected arable land that one should search for this weed, always abhorred by the farmer, but ever welcome to the bird-keeper, and in most country districts it is easy to find large areas painted bright yellow by its abundant blossoms.

It is a rapid-growing plant, quickly running from its seedling stage up to eighteen inches or two feet in height, and sending out numerous branches topped with its not inelegant flowers; but its life is a short one, and after producing its plentiful crop of seeds, it dies completely away.

The illustration shows a small flowering branch of the charlock, with the seed-pods already lengthening below. It will be noticed that the flowers have four petals arranged crosswise; and the internal structure of the flower is very similar to that of the winter-cress described last week. The small drawing marked B shows, much enlarged, the characteristic four long and two short stamens after the petals have been removed, and at A and C are figured two seed-pods about natural size.

It should be observed that these pods are crowned by a sort of beak, which is as a rule quite empty, and does not split when the pod bursts to [illegible] the seeds. Intending gatherers should, of course, never allow their specimens to reach the advanced stage shown in C, before collecting the plants, or a large percentage of the valuable dark brown seed will be lost.

Charlock (called also kedlock and kilk in some parts of the country) is a very coarse, rough plant, and closely resembles two other species, cultivated and known respectively as rape and white mustard (Brassica [illegible] and Brassica alba Boisc).

The seeds of the former of these yield the [illegible] oil, while the latter plant [illegible] in its seedling stage with [illegible] of our earliest spring [illegible] and cress, but is much cultivated by agriculturists for various uses on the farm.

The leaves and flowers of all three species are very similar in shape to those shown in the sketch, and the plants differ principally from one another in the varying formation of the seed pods.

No fancier should be without a plentiful supply of the valuable seeds of this much despised weed. If properly dried and harvested, they may be safely stored for very long periods, and in the cold months of winter they are amongst the most useful of all our wild seeds, if used in moderation.

CHARLOCK.

A, Unripe Pod; B, Inner Part of Flower; C, Ripe Pod.

It would indeed be difficult to find any seed, either wild or cultivated, which possesses more pronounced heating properties than this of the common charlock. It is rich in valuable nitrogenous and oily matter, which is of the greatest value as a food in the cold weather, and consequently has long been recommended as highly beneficial to Canaries or British birds suffering from asthma, or any of the other troubles arising from a chill.

It is interesting to note here that it is an established fact in the science of pathology that not only we ourselves, but birds also, contract diseases when our temperature is below the normal which would otherwise have no effect upon the system, and in the prevention of disease, therefore, it is of the greatest importance to see that sufficient heat-giving matter is contained in the diet provided.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed, "The Editor, CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

A Subscriber from the First.

I was unable to get my CAGE BIRDS for April 21, but this is the only copy I have missed since its first number, writes Mr. D. H. Tedstone, Brecon. I have the copies for 13 years tied up in separate parcels, and I expect this is a record.

Money Waiting for Return.

Would those who enclosed Postal Orders and not stamp, in reply to my advt. of British birds in CAGE BIRDS of May 5, writes Mr. W. Leeson, Rushden, please do so at once, as the letters were so numerous that it is impossible otherwise to return the money orders.

OBITUARY.

MR. LEVI BUTTERWORTH (Rochdale).

Another good old fancier, Mr. Levi Butterworth, has passed away at the age of 70, writes Mr. R. Blincoe. As you know, he was a well known breeder of Lizard Canaries, and articles on the subject by him have appeared in your columns, and he was very popular as a judge in this and neighbouring towns. As a real good straightforward fancier, ever ready to give the benefit of his wide experience to anyone who desired his help, he will be much missed by the wide circle of friends whom he had amongst all who had any interest in the hobby.

MR. JOSEPH HIGGINS (Meikle Earnock).

It is with deep feelings of regret, writes Mr. J. Young, sec., City of Glasgow O.A., that I inform you of the death of Mr. Joseph Higgins, Meikle Earnock, near Hamilton, N.B., and whose remains were laid to rest on Friday, May 11. "Joe," as he was familarly called, was a born fancier, having bred and exhibited in his time some of the finest specimens, especially Scotch Fancies, that ever graced the show bench. Having a "keen eye" he was often requisitioned as a judge at prominent fixtures, and was an active member of the City of Glasgow O.A. for upwards of 40 years. The deceased was naturally of a genial and cheery temperament, and will be missed by his many friends of the "Old Brigade." He was always anxious and ready to assist the novice fancier, and no one could "stage" a show bird from the Scotch Fancy to the dapper little Border better than our departed friend. I am sure the sympathy of the entire Fancy will go out to the sorrowing widow and family in their bereavement.

Mr. W. S. Wilson, sec., Hamilton O.S., also sends a sympathetic reference to the death of Mr. Higgins. (Editor, CAGE BIRDS.)

"CAGE BIRDS" ROLL OF HONOUR.

Pte. R. Muir, Lochgelly.

It is with very deep regret, writes Mr. W. Grewar, that I inform you of the death in action of Pte. R. Muir, the late esteemed and energetic secretary of the Lochgelly C.B.S. He was killed on April 25, after being at the front since November. A keen student of nature in its wild state, he kept British Birds and Mules, and was getting together nice stock when called up. Although it is only a few years ago since he entered the ranks of the Fancy, he was well known, and being of a cheery and obliging nature he was greatly liked and esteemed by all who came into contact with him, and will be sadly missed. As a member of the clerical staff of the local Co-operative Society, he was well known and popular with the members. Great sympathy is felt for his relatives and wife, while I know that the Fancy will join with the members of the Lochgelly C.B.S. in their most sincere expressions of sympathy and condolence with them in their sad loss.

Pte. John Wetherall, Wigan.

I am sorry to inform you, writes Mr. P. Greenall, Pemberton, of the death of Pte. John Wetherall, who has died of wounds in France. He has left behind a sorrowing wife and one child, to whom we extend our heartfelt sympathy. He was an enthusiastic Roller fancier, just beginning to reap a few prizes, and his untimely death will be deeply regretted by his fellow members of the Wigan Roller Club.

A Roller Fancier Interned.

Writing from Brandenberg, Mr. J. A. Ives, of Grimsby, says: "Please inform your numerous readers and Roller fanciers especially, that I have been made prisoner. I left Grimsby on Jan. 20, and was brought here by submarine. I have no doubt that Mr. Whiteley will attend to all seed orders; my presence here will explain any delay with the rape seed. I shall be pleased to hear from any fancier friends, and shall be much happier when I can meet them once again. I am a member of the following clubs, B.R.C.C., P.R.C.C., and Leeds R.C. The address is: Capt. J. A. Ives, S. T. Alexandra, British Prisoner of War, 81 Camp, Brandenberg (Havel), Deutschland.

British Finches for Exhibition

By S. J. NICHOLAS, Swansea.

In this lecture, given before the members of the Swansea C.B.A., an experienced keeper of British Hardbills tells how to select them as freshly-caught birds, how to bring them through the moult, and how to prepare them for the show bench.

IT gives me great pleasure to give you a short lecture on selecting, moulting, and preparing British Hardbills for exhibition. At the outset I may tell you I do not wish it to be inferred that the methods I am going to put before you are infallible, yet I can assure you that after an experience closely approaching 20 years I have proved them at least to be effective.

In the selection of your birds there are four dominant features you must keep before you if your specimens are to turn out really first class exhibits, namely, size, type, colour, and markings. I have placed size first, as this is undoubtedly one of the chief features that at least nine-tenths of the present-day judges are looking for, and you can readily understand that a good big bird naturally commands attention, but for the benefit of the younger fanciers, to whom I hope my remarks will be some little help, I should like to make myself clearly understood.

Our Essential Qualifications.

Whilst I place size first, you must please understand that I do not wish you to infer that should you come across a bird with plenty of substance and nothing much else to commend him you are going to moult him into a champion. Such is not the case; in addition to size he must have type and colour and markings.

Type is a very important point, and in this item I am going to include head. See that your bird has a good bold head, with a bright eye, for one of the greatest drawbacks in an exhibition specimen is a weak head, especially when it comes to keen competition. Your bird must be nicely moulded, that is, proportionate all round, with well braced wings, and above all must have a good position on the perch, with no inclination to crouch.

Then he must have colour. As you are aware, in every variety there are yellows and buffs, the former being the richest colour. The yellows are the ones we are on the look out for, as likely to make the most successful exhibits. The buffs are easily distinguishable, as, in addition to being paler in colour, they carry a mealing right through them, usually very noticeable on the cheeks.

Your bird must also have markings, and by markings I mean lacing on the breast, etc., in a Linnet; blaze, tannings, etc., in the Goldfinch, and such like essential characteristics of the different varieties, some of which I will endeavour to describe a little more fully later.

Some one may say you have mentioned nothing about quality. Yes, I will admit you must have quality of feather also, but I did not worry you with this, as after handling hundreds, if not thousands, of wild birds I have yet to find one of really bad quality that could not be improved with judicious feeding. Rightly or wrongly I have come to the conclusion that coarseness of feather as we understand it to-day is rather a product of man than of nature.

Having given you the essential features to be looked for in every variety of British hardbill I propose to give you as briefly as possible some of the chief points that go to make up a really first class specimen of a few of the most popular varieties.

The Points of Exhibition Finches.

A Goldfinch should have an expansive, rich coloured blaze (free from any suspicion of bronziness) extending well back behind the eye and down the throat. The blaze should be as squarely cut as possible, and free from gutters, the breast nicely tanned, wing-bars a rich golden yellow, the buttons well defined, and the back a sound colour. He should also have a well filled chest.

Another very popular exhibition bird is the Linnet. Now in this species there are two types that are shown successfully. The one we will call the Norwich type, and the other can best be described as between a Norwich and a Yorkshire. For preference give me the latter, as this bird is far more stylish, and has a better position on the perch. Still, to be successful, you must keep both types.

The markings should be well broken up, covering as much of the breast as possible, and extending well down the flanks. The whites in wings and tail as prominent as possible, and the throat, cheek and back markings well defined. The back should be a rich, nutty brown, and the throat, chest, and flanks a good rich colour, paling a trifle to centre of breast.

Another type of Linnet very popular some few years ago, was a bird with long, very regular and distinct markings, in fact what many judges term "hen laced," but of late years most of the leading judges pass them, though a few still stick to their old love, and should you come across the bird I describe, and watch the judges who are keen on these markings you will do very well with him. The latter birds are usually of medium size.

A Common Bird, but Pretty.

Now let us take the Greenfinch. Both yellows and buffs of this variety are shown successfully. The Jonques are naturally much richer in colour than the buffs, but in very few instances are they the size of the latter. Both varieties should be as clear in colour as possible, and those in field feather that show a smokiness about the back seldom, if ever, make show specimens. The wing-bars and outside tail feathers should be rich yellow, and in a good specimen you will find the lower part of breast and right down to the vent a rich yellow, also your bird should have a bold appearance and stand rather erect.

Another popular variety is the Bullfinch and a cock of this species with his rich scarlet breast, deep black cap, and, may I say, aesthetic lavender back is indeed a handsome bird. A show specimen should be as cobby as possible, with good deep chest, well cut cap and bars, and short flights and tail.

The Lesser Redpoll is another great favourite with exhibitors. A good show specimen should be thick set, with a distinct bib, and a wealth of lacing at sides. The throat and breast a rich brown colour, gradually getting paler towards the vent. The back wings and tail should be a rich mahogany.

The Siskin is of similar shape to the Redpoll, and a really good specimen should be a rich yellow with distinct eye markings, the cap nicely laced, prominent wing bars, and neatly laced thighs.

The Bramblefinch should have a well cut hood or mantle. The ground colour of head and back black with even rich brown lacing. The throat, breast and flanks also should be a rich red brown, the wings have good pear shaped markings, and the thighs carry plenty of distinct lacing.

Latterly the Yellowhammer has been greatly boomed, and I will endeavour to describe to you the chief points in this variety. The head, throat, and under portion of breast should be a rich yellow, the top of head as clear as possible, with a distinct black line on either side running from the beak to the back of head, forming a V. Level with the eye and beak on each side he should have two more distinct black marks. The back and wings should be rich brown interspersed with dark markings. The sides and thighs should carry a profusion of lacing extending right across the top of breast in a half circle, making the head and throat stand out very prominently.

About Stock Cages.

Having selected the birds you intend to keep for moulting out, your first business is to see that they are suitably housed. I find for British not larger than a Bramblefinch, a box pattern cage, that is, all wood except the front, 13 inches long, 6 inches deep, and 10½ inches high, with door at end, and fitted with loose wire front, makes an admirable stock cage. The feeder and water bottle should be on the outside, and perhaps it would not be out of place to mention that you would be well advised to use a china or glass drinker, and not a metal one, as there is a certain amount of risk in giving medicine in metal drinkers should you have occasion to do so. You can either have a drawboard at bottom or simply a movable strip of wood large enough to allow for cleaning out purposes. The latter I prefer, as it does not harbour the red mite as a drawboard does.

The inside of cage should be either painted or enamelled with at least two coats of good colour, and the outside painted black or varnished. Any painter will mix you up a good flat, hard drying paint very cheaply. After the first coat well putty up all the cracks and joints, both inside and outside, before giving the final coat. To some this may seem a lot of unnecessary trouble, but I can assure you that it will well repay you later on, when the season for the red mite is with you. These little pests will have no crevices to hide in, and though careful as you have been you will still get them, they will only have the ends of the perches and the door to swarm in, and directly they appear you can make short shrift of them by scrubbing the cage well with a good disinfectant, and by painting the ends of the perches and the door crevices with a mixture of camphor and paraffin.

The Importance of Steadying.

The steadying down process will try your patience a little. One of the easiest ways to steady freshly-caught birds is to hang them in the living room on a level with you in a position where someone or other is continually passing. If the position is not too light, so much the better. Whenever you come in take hold of the seed-hopper gently, put some little tit-bit or other in, and talk coaxingly to the bird.

When cleaning the cage, run your bird into a spare cage, and if the weather is suitable give him a spray with warm water. Don't rush like a bull at a gate, but just gently spray him; then have a look at his feet, and if they are the least inclined to be clogged take him out and sponge it off with a damp cloth; if very dirty you will have to soak them in a little warm water. Do not pick the dirt off dry with your fingers. Never forget that one little slip and off comes one of the toes, and your bird is ruined for ever. Some may ask why I advise spraying them before handling. My reason is that wild caught birds are more easily handled, and with less risk of damaging them just after being sprayed.

Always remember to be as gentle as possible when handling freshly-caught birds. You will do more in a short time to gain their confidence by the method I have described than in twelve months by rough handling, and you will be really surprised how quickly they will steady down. Many, should you not happen to notice them when you come in, will call to you, and I have at present a Yellowhammer that was as wild as the heather, a short time ago, who will watch me all round the room and keep on calling until I give him a mealworm, which he will take from my fingers.

Some Useful Stock Foods.

A good stock food for Goldfinches, Bullfinches, Siskins, Greenfinches, Chaffinches, and Bramblefinches, is a mixture of canary, hemp, linseed, teazle, and rape, with a liberal supply of sunflower daily. The latter is better given cracked, and in the case of the Chaffinch and Bramble, a couple of mealworms each day will be very beneficial.

Linnets, Siskins, Redpolls, and Twites do well on canary, rape, and linseed with the addition of a little teazle and niga occasionally. The Bunting family care little or nothing for any seed except plain canary, though I have had a few specimens that would eat hemp and oats. They should be given two or three mealworms daily, and if they can be got to eat a little insectivorous food about twice a week it will save a lot of trouble when the moulting season arrives.

Enough Epsom salts to cover sixpence, given in the drinking water once a week and allowed to remain for 24 hours, will help to keep the birds cool, especially during the breeding season when many field-moulted birds go wrong.

(To be continued.)

AN IDEAL BIRD ROOM.

Two papers read at a meeting of the Sheffield C.B.S. and kindly forwarded by the Hon. Sec., Mr. E. Sisson.

By E. SISSON.

I SUPPOSE in selecting an ideal bird room the first thing to take into consideration is the position of the room. If any fancier is fortunate enough to be able to have a bird room over the living room, such room is generally free from damp, warm in the winter, and can be easily ventilated during the summer months without causing draught. I think most fanciers, however, have to be satisfied with the attic, but provided it is a dry room, with a good supply of light, it is better than no room at all. I would rather have an attic that did not face the sun, or it becomes a veritable bakehouse in the summer, although the winter, especially such a one as we have just had, turns the room into a refrigerator. It is understood that the less birds are coddled the more robust they are, but they certainly require more attention in a bird room that goes to six or eight degrees below freezing point.

The Cages and the Fittings.

With regard to cages, some prefer single breeders, others double. The latter certainly have advantages over the single, but whichever a fancier has it is well to have them of a uniform length, height, and colour, so as to give a more pleasing appearance to the room. It also adds to the neatness of the room if the cages are fitted with seed hoppers of one description and drinkers of one size, which should be put in the cages one over the other so as not to have a water pot over a seed hopper, or else you will get the seed wet.

Racks are very useful, as it is possible you may have to remove a cage during the breeding season for cleaning purposes, and to be able to take one cage away without disturbing the others saves a lot of time, but the less wood you have about the better, as there is always the possibility of breeding that infernal pest, "red mite." I have screws in some of my cage bottoms, and under others little bits of hard wood, but when I have the cages ready for breeding I drop the bits of wood into carbolic, and this makes them stick, and there is very little chance of anything breeding round them.

I distemper my cages, as I think it is easier to use, is a good disinfectant, gets well into the crevices, and is a chief agent in subduing red mite. Even if your cages are enamelled or painted, when washed they generally dry before the lurking places for the pest have been touched; not so with distemper.

Some prefer sand to sawdust, but I think the latter is the cleaner, and keeps a room sweeter, especially if you can secure pitch pine. A word to the would-be fancier. Commence with cages you can either make or get hold of and then frame for the future. I wish all fanciers unbounded success during the coming breeding season.

By "RIGHTABOUT."

A Paper in Lighter Vein.

THE subject of this paper is a very important one, especially to the novice who has had no experience. To help in the choice and furnishing of a bird room, it is essential first of all to decide what variety we are going to keep, as all breeds do not require the same treatment.

In the first place, an ideal bird room is the means to produce the ideal bird, and to commence with you must make a point of having a room with plenty of ventilation, as all fanciers know the benefits of fresh air. I would suggest any outhouse or stable, one with a northern aspect for preference, as then in winter the birds get the full benefit of the north winds, and any frost at these times is good for keeping down disease.

After we have got the room, we will suppose the variety chosen are Yorkshires. Now these want a room furnished altogether different from the Norwich. To begin with, if the walls of the room are papered, let the pattern of the paper be one with long upright lines as straight as possible. This variety is very vain and proud, so a small looking glass placed high up in the cage pleases the bird's vanity, and he will be constantly standing on his toes to see himself in the glass; this is called style or swagger.

No Need for Inbreeding (?)

Another very important article to procure if you keep Yorkshires is a number of 12-inch rules; these require marking with red ink at the 7½-inch line, and each one making secure to the front of the breeding cages. This is a great incentive for the birds to breed length. I understand the Bradford fanciers use these largely, but when prospective buyers arrive they are all put away so as to preserve the secret.

Everything in the room must be in keeping with the bird, so the cages I prefer for Yorkshires are 20in. high, 7in. wide, and 6in. deep. For instance, I should never recommend anyone like our friend Mr. Drabble to go in for Yorkshires; he would be more of a success with Norwich. Again, Mr. Furniss is a typical Yorkshire. I merely mention this just to show how important it is to have a good beginning.

The cages, furniture, etc., for a Norwich should be just the opposite. I like a nice fat cage for them, one 10in. by 10in. by 8in. deep, and one inch wire netting is preferable for the fronts. This gives the bird the idea of roundness; he will constantly be trying his head through this to see if it is nice and round, hence the term, "Head nice and round." Other things must be in keeping; a special cage must be placed quite opposite the breeders, and in this it is advisable to keep a pair of pigeons; this gives the idea of size to the old birds, as well as the young ones in the nest.

The colour of the room is very important. Everything must be of a rich red colour, then during the moulting season a nice sum can be saved on the colour food. My space is nearly done. There are other improvements I should like to have mentioned that go to make an ideal bird room, but these must be left for some future occasion.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. J. H. Whelan, 14, Leigham St., Plymouth.

The Red Mite Pest.

A Hot-air Cure.

SIR,—As a novice I would like to give my method of keeping free of the company of the red mite. Before giving any fresh seed I take a week's supply, put it on an ordinary newspaper laid flat on the table, and work it well about with my fingers. Then I empty off and examine the paper carefully. It is better for the eyes to use a good glass, as they are then more easily seen. They are of a grey colour when in the seed, and alter colour as they come in contact with our birds. Next put your paper two-fold in or on the oven, empty on your seed, to be not more than three deep, and work seed well about with your fingers for two or three minutes, seeing that the heat is not so great as to damage the seed (about 80 degrees). Mr. Mite will soon be on the paper. When putting the seed back into the vessel don't put in the dust from off the paper, or in goes the mite. If this is done carefully, and your birds kept clean, you need have no fear of mites. Three years back I was over-ridden with mites, and I tried all sorts of spirits, but to no purpose, so I broke the cages up and made a few more. I have used the above method for two years, and am pleased to say I am clear of them. My birds or cages could be examined at any time in reason by any one who has any doubt.

SAM J. PUGH.

On Making a Start.

The Value of Expert Advice.

SIR,—Mr. Martin surprised me by his statement in his lecture at the City and Suburban that the novice should trust no one, but use his own judgment. This is an insult, and degarding to the fancy. It gives one the impression that in the opinion of the lecturer experienced fanciers are a lot of thieves and rogues. I have found as many honest and honourable men among bird-keepers as in any other fancy, trade, or calling. I claim to be one of those individuals, and am pleased to say that I have never stooped so low as to catch a novice, or starter, on account of his ignorance. I have supplied Yorkshires and Norwich, singles and pairs, to a number of novices (who have left themselves in my hands), which, when shown, have been first and second in fairly big classes and good company, and winners have also been bred from them. Reports of the shows have appeared at various times in CAGE BIRDS, which will verify my statement. At any meeting of the Crystal Palace and Penge Society, of which Mr. Martin, myself, and several novices are members, Mr. Martin can have names of members of the above and other societies as proof, and no doubt there will be some members present to give him an idea whether I have caught them with "spoon-feeding." The price well suited their pocket as working men, so that they have not done so badly with the spoon-fed treatment. My advice to the man making a start is to find an honest, reliable man—there are plenty in the fancy—and take the "spoon-feeding" until he has gained knowledge and can feed himself. Don't be fed by a shovel, and don't listen to bogey and bluff. I wonder if Mr. M. has always backed his own intelligence without seeking the advice of others.

Early Outdoor Canaries.

Wales Goes One Better.

SIR,—I have read with interest the letter in CAGE BIRDS of May 12, under the heading "Early Outdoor Canaries." Mr. Hy. Wood may be pleased to know that I have two Norwich Canaries hatched on April 23 under exactly the same conditions as stated by him.

Taff's Well. T. C. BAKER.

Plymouth a Long Way in Front.

SIR,—Seeing Mr. Wood's letter re early young Canaries, I write to tell you that I have six young Canaries, hatched on Easter Monday, April 9. In an outside aviary, with no heating whatever, in fact, I have had to break ice three and four times a day during the past winter. I am a regular reader of CAGE BIRDS, and I get all my information from it. The birds are all doing well, so I think I can crow a bit about early outside young Canaries. I have reared these six on the recipe of egg cake found in the columns of your paper, CAGE BIRDS.

CHAS. H. LEY.

Plymouth.

Goldfinches in Scotland.

Are They Decreasing in Number?

SIR,—Kindly grant me space in your valuable paper, CAGE BIRDS, to call the attention of bird-lovers to the extinction with which that beautiful bird the Goldfinch is threatened.

In Scotland this bird is only found in the extreme south, and even there it is very scarce. Yet I wonder how many of your readers know that it was once quite common as a breeding species here (Bathgate), and was known to our ancestors as the Gowdie or Gold Spink. Even as far back as the fifteenth century it was a well-known bird, and Bellenden mentions it in the following lines:—

"The Green serene sang sweet when
The Gold Spink chantit."

Now all is changed, and I think I can safely say that there is not a Goldie to be found to the north of, or in, the Rift Valley. The only reason I can see for this is that the ravages of catchers among birds in the South leave so few at large that the survivors have abundance of food in the Southern counties, without coming our length.

The present manner of catching and caging this bird lays itself open to censure. First, birdlime is extensively used: this is a cruel method, as if a bird gets well covered with it it has a poor chance of living. The lime is often clogged on their toes, and must cause them great pain, and helps to raise the death rate, which must be about 75 per cent.

What is even more cruel is the catching of "Greypates" which are hardly able to feed themselves when at large, far less on hard seed in a cage, and about 50 per cent. of which die in the first few days of captivity.

Even as early as the first week in August I have seen these birds for sale at 1s. 9d. each, crammed into tiny cages, and being fed on crushed hemp. Can we wonder that the death rate is high?

If catchers would only leave these birds until November, the birds would be more able to stand cage life, and it would save the old birds from being caught while they have still young in the nest.

I can never understand why, when naturalists are lamenting the scarcity of this bird, we allow hundreds of cocks to be exported to America every year. America does not allow any of her native birds to be exported to us, and, although I am a supporter of British birds as pets, I fail to see why we should supply a huge continent like America with song birds at the expense of the bird life of our own countryside.

J. B. LAW.

[We are inserting the above letter as received, but would point out that so far as we know the Goldfinch is protected throughout the whole year in every county in Scotland. It was always, we understand, a scarce bird in the North of Scotland, and was never very plentiful beyond the Tweed. Further, we believe it to be increasing in nearly every county in which it is to be found at all.—Editor, CAGE BIRDS.]

The Care of the Linnet.

To Help in the Moult.

SIR,—With reference to my note on the care of the Linnet and the forced moult, I wrote with no disrespect to "Rambler." No doubt he thought he was doing the Fancy a good turn. Now before my few notes appeared in CAGE BIRDS I was speaking with my old friend Mr. Donnelly upon the subject and he asked me how it would be if any of your birds was stuck in the moult. Well, you must relieve them if you know how. I told him the way I relieve mine if they get stuck, and neither of these two articles has ever failed me, but care must be taken to keep the birds covered up awhile, say for a week. You have only to give it once or twice if very bad. Take 3 or 4 drops of sweet nitre, drop them in the water and leave on for two days; this will have the best of results. The other is a small piece of soda, the size of a pea, dissolved in drinking water. These are the two best remedies I know, and of the two I much prefer the former. Birds get fast in the moult through catching a chill when moulting, as they are at their worst during that time.

W. LLOYD.

Early Mule Breeding.

SIR,—Seeing in last week's CAGE BIRDS that young Canaries were hatched outside on April 25 by Mr. Woods, I think I can beat him for being early. I have an outdoor aviary in which I have bred birds for over six years, and I find it far better than breeding in cages. Last season I cleared all out of the aviary but a cage moulted Goldfinch and a hen Canary which I reared myself. The hen is a very good one of Norwich-Yorks. cross, which make the best feeders I have had.

The first season she reared 15 Canaries, last season I paired her to a Goldfinch, and she laid 14 eggs in three nests. All hatched out, one died at a day old, and she reared 13. The first nest hatched out during the third week in May. This year the same pair have been together all the winter, outside. She laid her first egg March 16, and was sitting while the snow was about, and the water pot froze; they hatched out on April 3, and are doing well on seed, and she now has five more eggs, due to hatch May 15. How is this for mule breeding, which is more difficult to get than Canaries? I should like to know if anyone has beaten this or if it is a record.

I find from experience that in mule breeding birds should not be parted, and then run together for a week, and so on, but if you keep them together through the winter, you will get earlier and better results if outside. Feed on good mixed Finch seed all the winter and part the birds for a fortnight while you are feeding the Finch up. They can run together the rest part of the season. Give an unlimited supply of green food, and the young will thrive and do well.

R. J. ROWE.

Why Members' Shows Fail.

Too Many Small Independent Societies.

SIR,—Having read Mr. Coe's letter in CAGE BIRDS of May 12, I agree with him in the point system. For instance, say two members show two birds each in one class and their awards turn out 1st and 7th and 2nd and 6th. Where is the deciding point to come from for a special, if any? At members' shows there are some classes that do not get patronised, and I think the small classes in members' shows are a great grievance with members who have birds in a class that is fully patronised. I have been at many members' shows and have seen classes with one and two entries; still these members get the same amount of prize money as a member who is 1st in a class of sixteen entries. My idea would be to run all members' shows on the sliding scale system according to the entries; this I think would give a little more encouragement to the member successful in a good class.

I am also of the opinion that members' shows should never be a failure where there is no opposition, if the officials appointed take a real live interest in the work taken on by them.

What injures members' shows? I think it is too many clubs in one district, for this causes a grievance between the members of the different societies. In Falkirk there are three separate societies, and the members of these societies are all within the same radius. Last year one of these societies amalgamated with Bannockburn and Grangemouth; what is the matter with the other two Falkirk societies that they cannot amalgamate with these societies and be as one?

I would be delighted if these three Falkirk Societies would come together and amalgamate. I am of the opinion that if this takes place Falkirk will be able to boast of having the best turn-out in Scotland for a members' show.

There also could be some entertainment at the meetings to help the novices, such as judging, washing, and lecturing on different species. I think it would entice the novices and cause more friendliness amongst members. I am of the opinion that all the members of the three societies will heartily come forward if properly approached and will be highly pleased at the uniting of the societies. I am afraid failing in this attempt will mean missing our only chance to keep the Fancy up and if Falkirk fanciers mean to maintain their position in the Fancy they will have to come along, otherwise our three poor societies will all be to the wind this year. Members should be alive to the fact that their three societies are in a decline through opposition to one another, and I would suggest that the secretaries of these societies each call a members' meeting and decide what to do. The secretaries, I understand, are acquainted with each other, and it would be no difficulty for them to communicate the results and fix up for a meeting of all the societies. I trust this will meet the eyes of members and fanciers in Falkirk and the surrounding districts.

NOVICE CAMELON.

More Than One Reason.

SIR,—I quite agree with Mr. Coe on the point of not having so many cards at shows, but I do not agree with raising all fees. I think if the first entry was 1s. 6d., and 6d. a cage after, it should clear all expenses if the sec. is any good at keeping them down.

With regard to points, I should like to see all points after third done away with, as they only encourage dock sweepers and pot hunters to crowd a class with, perhaps, one good bird and four or five duffers. I have seen it on several occasions, and it is generally these sort of fanciers, so called, that make most noise about points. I myself would rather win a shilling ornament outright than compete for a ten-guinea cup or vase. I like free competition with one or two birds of my own, if good enough, in a class. If these points for cups, etc., are necessary to the well-being of a club, restrict them to the one who gets most in the first four birds. I think a judge should act up to his knowledge, and refrain from giving cards to duffers; at big shows I notice there are often blanks in the awards, and if it be right for big shows why not for members' shows?

One reason why members' shows fail is, I think, largely through the odd appearances of the cages; you know the owner's name, and you can pick out all his birds by the colour of the cages. I noticed it particularly at two or three shows in South London which I visited in the autumn and spring.

I think it is high time all British fanciers had a standard size cage and colour. If Scottish fanciers can fix rules for size and colour for British birds, why not English fanciers?

I am rather inclined to think that some of the judges prefer unnatural sized British instead of keeping to the standard and having birds as near natural size as possible, not birds twice the ordinary size, and wild things at that. I am not one of the disappointed exhibitors, as I have done fairly well with the few birds I have shown, having been in the money each time, but the money is not the consideration I look at, it is the sport and satisfaction of having a few fairly good birds to attend to and look after.

One other thing; it would do members' shows more good if there were not so much jealousy among members. Some will go to a lot of trouble to buy a bird to beat other members, especially where points are concerned. We know it is quite lawful to buy birds a few days before shows and sell them again directly, but it is not sportsmanlike.

Is Tredegar C.B.S. Dead?

Sir,—I thank Mr. G. O. Thomas for his open letter in the last issue of Cage Birds, but Mr. Thomas must know that he is not now a member of the Tredegar Society. At the annual meeting held March 17, it was decided not to hold another meeting until June 2. If Mr. Thomas will kindly send me his entrance fees and subscription, 2s., for 1917, I shall have pleasure in proposing him as a new member; he can then attend the following meeting, and all questions which have been asked through the press will be fully dealt with. W. B. Watkins, Sec.

Birds To and From Shows.

The Prepayment of Return Carriage.

Sir,—I have been expecting to see in your columns what steps are being taken with regards to the payment of the railway rates on birds returning from shows this next season, seeing that all parcels sent per passenger trains have to be prepaid. In the past railway companies would not accept the double carriage on birds sent to shows. If this matter has not been taken up now is the time to do so, and not leave it to the last moment. I have simply brought the subject forward in case it has been overlooked for the time being. D. H. Tedstone.

Sir,—As a constant reader of Cage Birds I am very fond of reading club reports. I see that there are a few shows being already fixed for the coming season, and judges have been already selected for various shows. But I have not seen anything about a point which puzzles me very much. How are show committees going to manage under the new railway act, when every parcel and package must be prepaid? It is all right for an exhibitor sending his birds on an outward journey, but what about the return journey? I have been thinking of an idea if railway companies would accept it. It is that when an exhibitor sends birds to a show the railway company should allow him to pay carriage both ways when booking his birds, and the railway companies should have printed labels ready to put on the cases, "Carriage paid both ways," "Carriage paid for return journey," or something similar. Bird shows have done a lot of good for our wounded soldiers and prisoners of war, so I think that railway companies should meet show committees in this matter, if they have not already done so. I hope something will be done and that nothing will be in the way of show committees holding their shows for charities, when our country is in need.

E.E.

(We shall be glad to have suggestions from our readers as to the best means of overcoming the difficulty of paying the return carriage. One way would be for the exhibitor to enclose, either with his entry fees or with the birds in the packing crate, an amount sufficient to prepay the return carriage. It must not be forgotten that railway companies are not likely to do anything to encourage traffic. They are subsidised by the Government for the period of the war, and the less they carry the better are they pleased —Editor, Cage Birds.]

Breeding Roller Canaries.

The Importance of Joining a Club.

Sir,—Under the above heading a letter from Mr. W. H. Morris appears in Cage Birds of May 12. There are one or two points in that letter that, with your kind indulgence, I would elaborate.

We are told that when the writer started breeding Rollers 20 years ago, he was living some 50 miles from any town in which there was a Roller Canary club, and that consequently, "being entirely on my own," he "knew nothing whatever about the bird or his song." After paying a well-deserved compliment to Cage Birds for the information he has obtained from its columns, he goes on to say that "the novice will greatly be helped if he will join a club and go to the monthly meetings, for there he will gather much valuable information which I myself was not able to obtain when I started the hobby."

Now it is this point that I wish to dilate upon for the benefit of those who have taken up the breeding of Rollers. The conditions under which Mr. Morris took up the hobby were, indeed, anything but encouraging. But, thanks to the ever-increasing popularity of the Roller Canary, these adverse conditions do not apply to-day. Some scores of Roller clubs are now established in this country, the great majority of them in the northern counties. Strange though it may seem, until quite recently only one—the British Roller Canary Club—was situated in the south. I say strange, because the Roller was first imported into London from the Continent. Yet in spite of this, and also the fact that London has always been the great emporium for this type of bird, it seems to have become a greater favourite amongst the Northerners. In any case, until quite recently the B.R.C.C. was the only Roller club in the south, but its activities being somewhat restricted to matters that are more or less technical and administrative, it was considered necessary to start a new club, which, although affiliated to the B.R.C.C., might prove of more interest and service to the novice and amateur members of the fancy. The Southern Roller Canary Club, with headquarters at the Imperial Restaurant, Old Bailey, was founded last month in accordance with this idea:—

There must be some hundreds of Roller fanciers who are not members of a club. Now I maintain that it is absolutely essential for a Roller fancier to join a Roller club. With other types of cage birds, although certainly advisable, it is not exactly necessary, for articles and illustrations will often suffice to guide the breeder, whose aim is entirely that of improving the size, shape, or colour of his birds. But with Rollers it is the song, and the song only, that matters. And no amount of reading, correspondence, diagrams, or explanations will enlighten the fancier who wishes to master the science of Roller Canary breeding and training. He must hear, and hear frequently, the tours of the bird, and have them explained at the same time by some more experienced fancier. At the monthly meetings, therefore, after the usual club business has been disposed of, a lecture is generally given, and an explanation of the song of the birds present is given. The distinction between the various Gluckes, the variations of the Hollow Roll, the elusive Koller Tour, and the charm of the low, deep sung phases of the bird's song are all explained, and the faults connected with these tours, such, for instance, as the high pitched Bell Tour, the sharp and nasal Flute Notes, or the objectionable Aufzug, are pointed out as they occur. I well remember the first meeting that I attended, for some half dozen well-trained birds present kept the lecturer very busy for over an hour explaining the different tours as each bird brought them. I can safely say that in that brief hour I learnt more of the birds and their song than I had tried to pick up from books for months previously.

To become a member of a club, then, is absolutely essential for every Roller breeder who wishes to become successful, or even to understand the birds with which he is dealing. There are, of course, other advantages to be gained by membership, as, for example, the exchange of views and instruction in matters of breeding, and the very important privilege in being able to purchase the acknowledged rings from the club. These rings serve not only as a means of tracing pedigree, but also as a qualification to enter the birds at the various contests held throughout the country. An un-rung bird is disqualified—ipso facto—from certain classes in these contests. Moreover, as the advertisement columns in Cage Birds clearly indicate, those birds wearing an acknowledged ring command higher prices. Candidly, if only on account of this last fact alone, it would be an advantage to belong to a club. And certainly the membership subscription of a club—generally 3s. 6d. per annum—is in itself insignificant considering the many advantages gained.

And now, Mr. Editor, whilst I tender you my thanks in anticipation of your finding space for this letter in your invaluable paper, I will take this opportunity to urge all Roller fanciers in their own interest to join a club, where they would, in the words of Mr. Morris, "gather much valuable information and be greatly helped." R. Dugdill.

Rearing Young Canaries.

Hemp Stops a Hen From Feeding.

Sir,—Being a regular reader of Cage Birds, which I could not do without, I thought I would like to give you my experience with an unflighted hen. She laid five eggs, and brought out five chicks. She fed them beautifully for seven days on egg food and green food; on the seventh day I gave her crushed hemp, but after giving the hemp seed I noticed that she would not touch the egg food, so I removed the hemp seed again, but she did not go back to her egg food which I give four times a day. I noticed the young in the nest had changed, and had gone so weak that they would not open their mouths, so I got a small stick and took them out one by one and forced them with egg food made up with a drop of water, every hour. The following day I did not want to take them out of the nest, as I could not feed them fast enough. Now the hen will sit on the side of the nest and pop in a bit of green food while I am giving the egg food. I expect them to be on the sticks any time, as they are three weeks old to-morrow, so I would like to know if any other fanciers have had the same experience. A Novice.

Bird-keeping a Profitable Hobby.

How it May be Fostered and Encouraged.

Sir,—No doubt most of your readers will remember that just before the commencement of this great war there was a powerful movement on the part of municipalities and narrow-minded faddists to compel the workers living in tenements to abstain from bird-keeping, and others in towns, suburban districts, and even in rural parts from keeping pigs, poultry, and rabbits.

The authorities backed up by their idealistic Medical Officers of Health and sanitary officers seemed bent on representing our cities and towns as an Augean stable, and our streets as paved with gold. But every sanitary reform catered for the whims of the rich who were capable of getting their pleasures out of town when they chose, forgetting that the workers, who were generally tied to the district in which they lived and slaved, could only amuse themselves with some of the smaller animals in their back garden, shed, or house.

The man of means and leisure could spend his energy on unprofitable pleasure on a golf course, which should have been tilled by those who could have provided for their own and even their neighbour's table.

In the past the bulk of our legislation was made in the interest of the rich, and thus the workers were restricted in the keeping of some of the smaller domestic economic animals, which form a not inconsiderable part of the wealth of the nation. These animals could have been maintained most economically on the wasted food daily put into the dustbin, manure-heap, or behind the fire.

People tending to animals are far healthier than the majority living in luxurious surroundings—they don't suffer from "nerves," dyspepsia, and anæmia. Even the sewermen and slaughter-men are much healthier than the park-keeper or the house-maid of the basement flat.

Working people keeping pigs, poultry, rabbits, or cage birds, are generally healthier, steadier, more moral, more law-abiding, and happier than those who have no hobby to occupy their mind in their spare time. Even if the keeping of animals is not always profitable, which it generally is, it gives those who possess them an immense deal of pleasure.

Bird-keeping and bird-catching give a working man as much, if not more, pleasure than hunting the fox, coursing the hare, or shooting the semi-domesticated partridge or pheasant does the rich man with great leisure, who is considered a sportsman because he kills for pleasure. And surely the working man's hobby does not rob his country of food as the rich man's sport, which puts out of cultivation immense tracts of land that could be put to better use in food production.

Bird-keeping and bird-catching are considered by many prejudiced and sentimental people to be cruel, and many a poor devil of a bird-catcher has been fined or sent to prison for alleged cruelty on the evidence of a policeman who often lies, or is absolutely ignorant of animals. Bird-catching is not a cruel sport. Fishing is, but did anybody yet condemn it as such?

Bird-keeping has a very great moral influence on those who go in for it; it makes one take an intelligent interest in bird life and, in fact, in nature in general. It is educative, and exercises and occupies the mind. Even if only for these reasons, it should be encouraged and fostered, so that in every village or hamlet in this country there should be a certain number of its inhabitants who keep birds for profit as well as for pleasure. Such a work should be undertaken after the war by a National Bird-keepers' Society with local branches stretching from towns into rural districts.

The villager or cottager, if he could only be interested in bird-keeping and breeding, would form a valuable asset in supplying the demand of the general public for cage birds, and thus enable us to keep the British bird trade in our own hands. Nobody could keep birds so cheaply as the villager, because he has around him all the material for their maintenance; he has not any need to purchase a single seed, egg, or other agent with which to sustain them.

He could always find time to attend their wants much better than the town dweller, and after the breeding season he could sell his surplus stock to the dealer. There are many village industries besides agriculture in this country: there are the weaver, and the frame-work knitter, all probable candidates for the bird industry.

Local societies should be far more numerous after than before this war. Such should undertake to spread information on bird-keeping by free popular lectures or conferences, so as to induce the villagers, especially the young, to take an interest in the craft, if not merely for pleasure then also for profit.

A word of warning to those who run bird societies. Run them for the love of the work, not as a means of "pot-boiling." Cater for the majority and not for the few. I feel certain that if a propaganda in bird-keeping were seriously undertaken after this war there would be numerous adherents gained. Now is the time to plan for the future.

H. G.

Remarks on the Breeding of a Pair of Nondescript Canaries.

The Grey Mare the Better Horse.

Sir,—About seven years ago a friend presented a delightful singing Yorkshire cock Canary to me. We had him for six years or thereabouts when he made such a fuss about his celibacy that I thought it only fair to procure for him a mate. I therefore interviewed a local small dealer, and bought from him an old experienced hen for 3s. 6d. She was a quaint old thing of the suffragette persuasion, and kept "Richard," my cock, in strict order and discipline. When he tried showing off or any uppishness she, in a matter of fact way, simply knocked him off the perch, and let him understand she would stand no nonsense, and that he was to confine himself strictly to business.

I never saw a bird so nonplussed and surprised as was Richard. On many occasions in the midst of a passionate love ditty he found himself suddenly sprawling on his back at the bottom of the cage. She scratched her sides and poll frequently like a monkey, though she was not verminous, and took her bath regularly. She was no spring chicken, far from it, for the scales on her claws were like those on an armadillo's back, large and heavy.

Of their first clutch of five, three birds died of fits, and before they departed nearly screamed their heads off, and gave us the equivalent of shell-shock by the squeaking noises they made, but of the two that survived one has turned out a beautiful singer.

This clutch was fed on what the dealer recommended, powdered Osborne biscuit, hard-boiled yolk of egg, and green stuff. He recommended giving a small percentage of the white of egg, and I fear I exceeded his instructions with sorry results. I pondered over the cause of the mortality, and after much cogitation, as I had previously noticed that my friend Richard rejected the white of egg, I concluded that therein possibly lay the causa mori.

White of egg is hard of digestion, easy of decomposition into poisonous albuminoids, ptomaines, and other toxins in the digestive tract, and an excellent cultivation medium for many pathogenic bacteria. I determined to eschew it in the future, and did so with the happiest results. Of the succeeding three clutches of six, six, and five, only one bird died. All the others lived and thrived, and were a credit to their parents and up-bringing.

Richard is a pure yellow bird, and the old hen was a pure dun, yet about three-fourths of their progeny were more or less marked. Two had black caps, two neck rings, two spectacles, and the others were irregularly flaked, except five, which were of pure plumage.

I know nothing of the geneaology of the two old birds, and wondered where the Mendelian law came in. Was the marking a recessive or a dominant characteristic? Judging from the origin of domestic Canaries, and from what I have seen of the original bird in the Canary Islands, I think one may safely conclude it was dominant. I had no space to carry on unlimited experiments in breeding, and so had to dispose of the progeny, but this year I am interbreeding two pairs of the marked birds, and am curious as to what the results may be.

The old hen, I am sorry to say, came to an untimely end. Before the last brood was half fledged she went through the greenhouse skylight seeking insect food for the brood, and never returned. She fell a victim to a prowling cat. But Richard rose superior to his bereavement, fed the youngsters most attentively and religiously, and successfully brought them all up.

As to food. From a very limited experience I believe yolk of egg and powdered biscuit and seedling cress, lettuce and mustard are the best food for young birds. The latter are easily grown in boxes. Scalded rape seed theoretically I think dangerous, from its liability to decomposition. I am inclined to think that Canaries, like pigeons and doves, at the breeding season manufacture an analogue of milk in their crops, a mixture of partially digested food plus a secretion from the mucous membrane of the crop. I noticed that the parents never gave any food direct from the feeding troughs to the very young, but only that which they regurgitated after the lapse of a certain time after feeding, the time lessening as the young grew older.

J. H. Whelan.

Queries Answered

For Rules, see last week's issue.

CANARY QUERIES

Answered by CLAUDE ST JOHN

SPARENESS OF FEATHER.

Early Reply.—This is not infrequently a congenital defect in Rollers, and in that case the prospects of any very material improvement being effected are rather remote. In any case it is not very likely that much improvement will be effected before the natural moulting season. The following treatment will be the best preparation for the next moult, and will bring about as much immediate improvement as can be expected. In addition to the staple seed diet give a piece of bread and milk the size of a hazel nut, soaked in cold milk, drained, slightly dusted with flowers of sulphur and then sprinkled with soft sugar every third day. On the intervening days give first half-a-teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a sprinkling of linseed in the bulk, and next add to the drinking water ten drops of lemon juice and as much chlorate of potash as will cover a sixpence. Continue this for a fortnight, then miss a week, and repeat treatment for another fortnight, and repeat it again for a third course. Give a morsel of green food freshly gathered, if possible, daily, and allow the bird to bathe as freely as it likes.

ALWAYS GAPING.

W. F. R. (Worksop).—The hen seems to be in an advanced stage of bronchial disease, and if this is of any long standing the chances of cure are exceedingly slight. Alleviation is all that can be expected in such cases. The first step should be to remove as far as possible, all the exciting causes of the condition, such as direct cold draughts, sudden extremes of temperature, or irritating, dusty and impure air. Keep the bird in a bright healthy place, well aired, and an equable and comfortable, but not necessarily overheated, temperature, which is free from the above-named causes. In addition to the staple seed diet, give every third day a piece of bread the size of a hazel nut, soaked in cold milk, drained, two drops of cod liver oil emulsion on it and sprinkled with maw seed. On the intervening days give first a morsel of some seasonable green food, and next a pinch of a mixture of equal parts maw, sesame, and gold of pleasure seed. In the drinking water add every second day for one week six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, and after this give instead 20 drops of the following mixture, which any chemist will mix for you, in the drinking water every second day for a fortnight, then miss a week, and repeat treatment for another fortnight. Mixture: 2 drs. syrup of squills, 1 dr. each of sweet spirit of nitre, tincture of lobelia and ipecacuanha wine, and eight grains of iodide of potassium.

FOR ONE WEEK ONLY.

A Novice.—Possibly your feeding is too stimulating, which may he to some extent the cause of the hen attending to her young so satisfactorily for one week and then deserting them to begin nesting again. A diet of hemp, rape and canary, as you say you give, may be either a suitable one or quite the reverse. It all depends on the proportions, of which you give no details. You only say you have tried leaving the cock with her without success, which is only what might be expected, as the presence of the cock with such a hen as this is simply an additional incitement to start nesting again too soon, and you omit to say whether you have tried taking him away and leaving her to hatch out and rear the young by herself, taking the cock, if possible, out of sight and earshot of her until the young are ready to leave the nest; if, indeed, she stuck to her duties so long as that. The wisest plan when you have a hen known to be of this disposition is to try to get one or two other hens nesting at the same time, so that it other methods of management fail you may have a chance of transferring the young to more normal parents to be reared. Apart from this, when she is going to nest again, take away the cock on the evening of the third or fourth day. At once cut out all hemp from the staple diet, and do not give the hen any hemp until the young are ten or twelve days old and do not give any dandelion at all as a green food. Give a staple of plain canary seed only whilst sitting, and limit the supply of egg food to one or two half-teaspoonful allowances at intervals during the period of incubation, and stop any other seed mixture you may have been giving. On the fourth day after hatching, and again on the sixth, add a crystal of sulphate of soda, the size of a small pea, to the drinking water from early morning to mid-afternoon. In all other respects treat in the usual manner, and if this has no effect, I am afraid there is no other remedy available except getting the young transferred to foster-parents for rearing.

SEEDS AND SLOW HEN.

A. J. A.—(1) The sample of hemp is just a trifle lacking in its natural oil, but it is quite sound and sweet in the kernel and perfectly safe and wholesome to feed to Canaries which are rearing young. The rape is a nice, clean, sweet and mild sample of summer rape of very good quality. This also is a perfectly safe and wholesome food for birds. I can detect no trace of mustiness in either. (2) I think this hen only needs a little time to get to business. If she has not got to work by the time this reply appears, give her and her mate between them a small teaspoonful of egg food with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it every second day for a fortnight or so, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazel, and broken groats. Give three or four leaves of dandelion daily.

IS HE TOO OLD?

Old Cock.—Considering the character of the late spring and winter, the age of the cock, and the fact that you have already had two nests of eggs from the pair, it is quite evident that you mated them up much too soon, and this, I am inclined to think, is the sole explanation of the eggs being clear. A cock six years old that is apparently in perfect health and condition is certainly not too old to fertilise eggs, but it is not unusual for them to be rather late in coming into full vigour, so that instead of being mated exceptionally early, it is much better to wait until the season is well under way. Leave the birds together, feed for a fortnight or so as advised to "A.J.A." in this issue, and it is quite likely that you will find the next clutch of eggs fertile, more or less.

MEAGRE RESULTS.

Will Pill.—You omit to say how or when the young die, or whether they are deserted by the hens or not, and it would have been better had you gone more into details of your method of feeding from the time the young are hatched. As the fresh stock of hens appear to be addicted to the same trouble, it certainly looks as if the cause lay somewhere in your treatment or the conditions under which the birds are kept. I rather doubt the wisdom of getting rid of all the hens of last season, as by so doing you might very easily have relinquished an important link in the making of your strain. However, this cannot be avoided now, so if you have any more broods due immediately, I can only advise you to try the following method, and if it is not at once more of a success write again and give all the details of your management and the conditions under which the birds are kept you can. You have, I suppose, already tried both leaving the cocks with the hens to assist in the rearing, and also removing them. If not, do so; that is, try the method you have not been using hitherto. When the young are hatched make your egg food of equal parts egg, yolk only, and bread crumbs, until the young are three or four days old, then gradually reduce the proportion of egg yolk to a third part of the whole, or you might add instead an equal part of crushed biscuit, making it equal parts egg, biscuit, and bread crumb, and if the biscuit is unsweetened add a very slight dusting of soft sugar. Avoid dandelion as green food, and begin on the fourth day to give a little freshly gathered (if possible) flowering tips of groundsel, lettuce, or watercress, twice daily, giving preference to them in the order named. If the hens show any signs of flagging towards the end of the first week, add a crystal of sulphate of soda the size of a small pea to the drinking water for the greater part of the day on two successive days, and give a little soaked rape in a separate vessel, and if this fails to tempt them try instead a teaspoonful daily of lightly cracked hemp, but see that the latter is sound and sweet in the kernel. This may hold you out whilst you are awaiting a more definite reply when I have more particulars.

SAMPLE OF HEMP.

Novice, D.D.—The sample of hemp sent has just about passed the border line of safety. Some of it is still quite sound and usable, but a quite appreciable proportion is stale and rancid. I should consider it a risky food for Canaries feeding young, especially if it was given crushed. The best plan would be to eliminate the risk by discarding it altogether.

INSECTICIDES.

I. O. K.—(1) If you smash up the chips quite small and steep a heaped tablespoonful of them in a pint of water overnight, and pour off the liquid next morning, it should be quite strong enough for spraying on birds trombled with grey lice. Spraying the birds for red mites is quite a useless proceeding, as in this case it is the cages that need attention, not the birds. The above quantity of quassia chips may or may not weight an ounce, as they are very light. The same chips will serve for a second time if a fresh supply of water is put on them after first supply is poured off, and allowed to stand until the next morning. (2) If the paraffin will dissolve the camphor I should consider it preferable to the turpentine as an application to the cages. The turpentine, if used often or freely, would have just the same effect of damaging varnishes with an oil base or paint on the cages, as spirit has on spirit varnishes. (3) Permanganate of potash is generally reputed a disinfectant, but its powers in this direction are very slight, I believe. It is a very good and cheap deodorant—a very different thing, for removing any trace of bad smell without leaving a strong odour of its own, and is therefore useful for keeping the air of a bird-room or the cages fresh and sweet. I am not aware that it has any material effect upon red mites, though I must confess I have not made any special experiments in this direction with it.

HENS DYING.

E. E. H.—Considering all the points I am strongly inclined to think that the real cause of the deaths was a chill owing to the climatic conditions which would be prevalent about that time, and to which hens are particularly suseeptible just at the time they are going to nest. At the same time, I would advise you to treat the rest of your hens as follows until they have gone to nest, and to quite avoid giving dandelion as green food. Give the usual staple of canary and summer rape, and in addition give separately for each pair a teaspoonful of egg food or an equivalent quantity of bread and milk, with two drops of cod liver oil emulsion mixed with it, every second day, and on the alternate days a similar quantity of a mixture of equal parts hemp (see that it is quite sound and sweet in the kernel), niger, white millet, teazle, and broken groats. Do not give any linseed. Give a morsel of green food daily—preferably chickweed, flowering tips of groundsel, or watercress, in the order named. Keep the hens well supplied with cuttlefish. In the drinking water add four drops each of tincture of gentian and dilute sulphuric acid every second day for one week, to tone them up a little. After this I think you will find better success attend their next attempts.

SHOW CAGE FOR YORKSHIRE.

Bullie.—The proper type of show cage for the Yorkshire as recognised by exhibitors is an open wire cage all over, with an arched top, which is also of wire. The standard size is 9ins. long, 6ins. wide, 14ins. to centre of arch from base, and 11ins. from base to eaves. The outside and wires should be done in black enamel or paint, and the inside of bottom part to which wires are attached may be painted or enamelled light green or blue. You would doubtless find an illustration of the cage in the handbook "Aviaries, Bird-rooms, and Cages," which our Manager could send you for 2/3, post free.

DRIED YOLK OF EGGS.

Constant Reader.—If the evaporation were skilfully carried out, so that no moisture remained in the boiled yolks, they would keep good indefinitely if stored in a cool, dry place, in an air-tight receptacle. Whether the result would be equal to dried yolk which had not been subjected to boiling I am not prepared to say, but, frankly, I do not see the need for boiling. There are several good brands of dried or desiccated egg yolk on the market, which are practically the same thing—that is, yolks from which the moisture has been evaporated, but I do not think these are boiled prior to evaporation.

BRITISH BIRDS. MULES AND HYBRIDS

Answered by H. NORMAN.

HYBRID WITH STIFF CLAWS.

M. A. S.—Foot trouble of some kind is one of the most common ailments cage birds are subject to, and although it may arise from several causes, I am inclined to think digestive trouble has as much to do with it as anything. Therefore I would advise you first of all to be very particular as to diet. Offer a spoonful of soaked rape and teazle two or three times a week, and gather wild food from the open. Many kinds can be procured just now, and others are coming along daily, dandelions are in flower, and in a few days the seed heads can be plucked; seeding chickweed, shepherd's purse, and groundsel are plentiful. I would also advise just a little Glauber's salts in the drinking water to stimulate the liver, the dose would be ten grains in four tablespoonfuls of water, given, say, twice a week. Keep the bird in the box cage and see that the perches are placed low, so that he does not have a decided drop from them to the floor of the cage. Remove the flat perches and replace them with round ones no thicker than a lead pencil, cut them from a tree if you can, so that they are a bit rough, affording them a surface that the bird can grip. Local treatment should consist of placing the feet in a saucer of fairly warm water, and then gently massaging the claws between the finger and thumb, using a little oily embrocation. This treatment, if persevered in, should effect a cure. Let the bird bathe on bright days, giving the bath in the early morning. Give him a couple of mealworms daily, or other insect life, sprays of vegetation infested with green fly are particularly useful.

MAKING NO PROGRESS.

Bullie.—In all Hybrid breeding, it is the rule for the birds to put off nesting as long as possible, so yours may be only deferring the happy day, but I may tell you that the Bullfinch cock is not a reliable breeder, although occasionally one is fertile; of such we had an example in our query columns of last week. Look it up, it may interest you. If you are particularly desirous of trying to breed with the Bullfinch, then keep them together a little longer; if not, try the Goldfinch, as this cross is not nearly so difficult. Evidently the hen is quite ready to go to nest, and if you have any difficulty in getting your Goldfinch ready you could have a nest of Canaries from her first, by running a cock Canary in with her about three nights in succession, and then removing him entirely, or she may not take to the Goldie for the second nest. The best show cage for a Bullfinch is one measuring 12 ins. in length, 10 ins. high, and 5 ins. deep, the bottom rail about 2 ins. high, not more, and the top partly open to allow the judge to look down on the back of the bird. You can buy specially made wire fronts for this purpose that are shaped at the top. The best colour is a fairly rich green: get a fully developed laurel leaf and try to match it.

BREEDING WITH BULLFINCH COCK.

Bullfinch-Greenfinch.—Your breeding affairs appear to be going on very nicely, and I should think your chances of getting something from your Bullfinch and Greenfinch particularly rosy. You may not have the trouble you anticipate with the Greenfinch; hens are generally much more steady when incubating, and I think your arrangements are quite the thing. I would suggest that you never go suddenly into the room, just let the birds know you are about, and when feeding them take as little notice of the nesting birds as possible. In the open Greenfinches nest from now onward, and I have found young ones as late as September. (3) I fancy you you will be more likely to be successful by pairing the Siberian Finch with the Hybrid should it prove to be a hen; this you can soon find out by running them together.

THE REARING OF HYBRIDS.

First Venture.—The cost and scarcity of hens' eggs will no doubt prevent many fanciers from using them as freely as in other years, and many substitutes will be tried. In the rearing of hybrids you should have no difficulty about them, because many crosses have been successfully reared without egg, the food used for the purpose being a good brand of insectile food, as given to Nightingales and Warblers. It consists mostly of ants' eggs, dried flies, meat meal, biscuit, etc. The Canary hens should be given the food some time before they are required to feed the young ones; they soon get used to it, and, in fact, become fond of it. It should be slightly moistened with mild or warm water, although I know one successful fancier who uses it in a dry state. Soaked seeds and green food should also be given regularly, and all kind of seeding wild plants, particularly the various grasses, and vegetation infested with green fly. If the hens will not take these, the young can be fed with them by hand. Scrape the fly off on to a piece of paper, and then offer them to the young ones on the end of a feeding stick; they are grand food for them, and help them along wonderfully.

HAND-REARING SKYLARKS.

Laverock.—Handreared Skylarks certainly have advantages over the wild caught birds. In the first place they are delightfully tame, and the cocks are mostly good singers; against this one has the difficulty that they must have an old bird to sing under, one that has the pure wild note, or they will learn anything they hear. The young should be taken fairly early, say about ten days old, just before they begin to run from the nest. Keep them in a basket or box with plenty of ventilation, and make a hay nest for them, which should be changed frequently. Feed every hour at first, and later on every two hours. Do not cram them; give just a nice meal, so that they are ready for the next one when the time arrives. They can be reared on almost any good Lark food, but the better the food the less liable they are to cramp. I have reared them successfully on the following: Insectile food, to which has been added hard boiled egg and an extra quantity of biscuit powder, or stale bread, soaked in cold water. The mixture should be made moist with milk, not sloppy, but just in that moist condition so that it leaves the feeding stick easily. Cage them off separately as soon as they can feed themselves.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

PARROT WITH DIARRHŒA.

Tim.—It is not possible for me to give you a helpful answer for you do not even tell me what kind of Parrot it is; you say it will not eat hard seed, yet give me no hint how you are feeding. You can do this even though you can't speak for the past; but surely you never bought the bird without an enquiry as to how to feed? The looseness of the bowels may not be ordinary diarrhœa, but in a newly-imported bird may be evidence of some even more serious trouble. For one day only make its drinking water quite saline with Glauber salts, then prepare the following: one teaspoonful of cornflour, one teaspoonful of condensed milk, five drops of brandy, mix these into a pasle, then add sufficient boiling water to make it liquid enough for the bird to drink. Give this for one week, but prepare it fresh daily. In the matter of food, as it will not eat hard seed I can only suggest either boiled maize, or the following sop: pieces of bread or biscuit, ten drops cod liver oil emulsion, and as much hot water as the bread or biscuit will absorb. It can have shelled nuts and ripe fruit (apple is very wholesome), also dry biscuit if it will eat them. If you give me further particulars I will try and give you a more helpful reply.

HARD BREATHING.

Mrs. E. B.—Continue the treatment already advised, but with this alteration: one teaspoonful of fluid magnesia in the water every fourth day, and on the other days continue the mixture. Continue this for a week or ten days, then substitute chemical food for the mixture. It would be better for it if you could give it a little honey and borax; most Parrots will bite at a small stick if you tap the beak with it, and if the end of the stick were smeared with the honey and borax some would be sure to be taken, or if you smeared the joint of the beak (the margins of the upper and lower mandibles) with same, by means of the stick, some of it would be sure to be sucked in. As regards the shedding of the down, this is quite natural and need cause you no anxiety at all, so long as the bird is not pulling its feathers. If you continue the treatment as above it should only be a matter of time for its condition to become gradually normal. Now we are getting such fine, warm weather, a little outdoor treatment would be beneficial, but do not place it in any direct current of air, nor yet in the full glare of the sun. It will not be well to continue the mixture longer than the state of its breathing calls for.

AVADAVATS IN CAGE.

Avadavat.—These birds are rather shy breeders, even in large aviaries, though some few are reared annually in garden aviaries. To make success probable in a cage, this should be roomy—a large Crystal Palace type, with the partitions removed, would be as good as any. Fit it up with twiggy branches as perches, and hang up a rush nest in the most retired corner, well screening it with sprays of heather or broom, or both. These wee mites are very fond of picking the millet seed from millet sprays. Give a mixture of canary seed (not giant, but a medium-sized plump seed), and Indian millet, with the seeding and flowering heads of any of our indigenous grasses as greenfood. Also, of course, grit, cuttlebone and water regularly.

SONG OF PEKIN ROBINS, ETC.

Musicus.—The individual merit of these lovely birds varies greatly, some equal and even surpass the English Blackcap, but others have little more than a call note; a few sing more or less continuously, others only in spring and summer. The best way to procure a good one is to wait till you can have one under observation for a little time, or, at any rate, long enough to hear it sing—not easy in these times—then you are likely to get hold of, at any rate, a songster of average merit. Their diet is simple, providing their quarters allow them room for exercise. Any good make of insectile mixture (soft food), made crumbly moist with boiling water—they are fond of grated cheese, and about a teaspoonful stirred into the soft food after it has been moistened, is good for them. In addition, you must supply ripe fruit and a few insects. A little milksop is a good, wholesome change for them. Some individuals are fond of white millet, and a teaspoonful once a week will do them no harm.

QUAKER PARRAKEETS.

Psittaci.—These are handsome, if somewhat noisy birds, very suitable for a roomy aviary, and also very accommodating, too, in confined quarters, for I have seen broods reared in a cage about 2ft. square by 3ft. high, and the young fully reared to maturity before being parted with. They will need a good heap of twiggy branches, similar to those from which birch brooms are made; these they will ent up into suitable lengths and build themselves quite a huge nest, attaching it to any stout bough that is suitably placed for them; a corner position is a good one, and the bough should possess one or more forks. As regards diet, they require a pan of canary seed and white millet in equal parts,, also a pan of oats, dari, hemp, and sunflower seeds in equal parts, greenfood in variety, such as grass in flower, dandelion, shelled green peas, lettuce, and ripe fruit. Grit and cuttlebone are important items in the diet of all Parrots and Parrakeets, and with water must be continuously supplied. The nests of these birds are really interesting structures, strongly woven together, and in a Surrey aviary I know of a pair which for the past three years have reared two broods annually.

BIRDS FOR AVIARIES.

Aviculturist.—An aviary 16ft. by 14ft. is a nice size, and would supply nice accommodation for about 30 pairs of birds, if planted with evergreen and deciduous trees and bushes, sufficiently close to supply good natural cover. Eight feet is a good height, as this leaves a space above your head when in the aviary. In such an aviary, with a suitable shelter attached, you could keep:—Finches: Gouldian, Bib, Long and Rufous-tailed Grass, Zebra, Olive, Diamond, Ribbon, Cuban, Grey and Green Singing, Alario, Spice, Parson, Fire, and others. Waxbills: Grey, Gold-breasted, St. Helena, Violet-eared, Sydney, Black-faced, Cordon Bleus, etc. Mannikins: Black-headed, White-headed, Tricolor, Rufous-backed, Yellow-rumped, Magpie, Bronze, Chestnut-breasted, Silverbills, Bengalese, Java Sparrows, etc. Etceteras: Pekin Robins, Diamond Doves, Green-wing Doves, Chinese Quail, White-eyes (Zosterops), Yellow-wing Sugarbirds, Blue Tanagers, Orange-headed Ground Thrushes. It should be noted that the intention is to include only one pair of each; a few odd Weavers for the sake of their gorgeous summer dress could be included, though some individuals are a disturbing feature in the aviary, but they are more obstreperous than quarrelsome. They certainly make a grand show, and if a really quarrelsome individual be acquired, it can easily be got rid of. I have kept all the above together in a similar-sized avairy to yours.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and** if a fee is enclosed the loss will be the sender's.

GENERAL.

Answered by THE EDITOR.

REDPOLL OR LINNET?

Bolton.—The birds you describe are Lesser Redpolls. The Redpoll is a smaller bird than the Linnet, and the red on the rump is a certain identification. A picture of a Redpoll appears in this week's issue.

(Advertisements continued from page 267.)

HENS

If you are wanting a spare Hen in any of the following varieties, I shall be pleased to supply you. There will be no delay. Every bird is put on rail same day as order is received. Every bird is guaranteed untried, in perfect condition, and ready to nest at once.

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER.—The stock book which makes bird breeding easy. The book no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 5/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

WINNING YORKSHIRE CANARIES.
CHAMPION, AMATEUR, AND NOVICE.

The three Yorkshire Canaries here depicted were all winners at the last Show of the City and Suburban A.C.B. The Buff Cock on the left took 1st Prize in the Amateur Section for Mr. H. G. Hannaford; the Buff Hen in the centre, owned by Mr. D. Eadie, won 1st in Novices; and the other is the Yellow Cock which took 2nd in the Champion Section for Mr. D. Hall.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS" DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

Soft Moult—Not Singing

Wanted, a trial; we are confident our medicines will give satisfaction. Ditchfield's Tonic Drops are a guaranteed cure for soft moult, going light, dullness, feather plucking, not singing, diarrhœa, and inflammation of the bowels. For birds that are stuck in the moult and for moulting British birds, this medicine is invaluable. Sold in 8d., 1/2, and 2/2 bottles. For bronchitis, wheezing, hoarseness, and inflammation of the lungs, get Ditchfield's Special Lung Tonic, also in 8d. and 1/2 bottles. The grandest medicine ever introduced for chest and lung affections in cage birds. As an advertisement, we will send a 8d. bottle of each medicine for 1/2, or two 1/2 bottles for 1/11. All medicines post paid at our risk. Also two valuable seed recipes, how to feed Linnets and Rollers for contest singing, given free to all purchasers of our medicines.—FRANK DITCHFIELD, Bird Specialist, OLDHAM.

BRITISH BIRDS.

Also Parrots of every description; send stamp for prices; all on approval, cash or deposit.

JOHN DAY, Live Stock Dealer,

77, PORTER ST., HULL.

FRED ALLEN, BRITISH BIRD CHAMPION.

4 CHALLENGES.

Seeing that Mr. J. Day, of 77, Porter-st., Hull, says, in last week's "Cage Birds," that he has a Linnet that can beat anything in Hull, and that there is not one Linnet in Hull that can sing against it, and, further, he states that he has judged hundreds of contests, I will give him a chance to prove his statements by wagering £100 that he fails to tell me the notes of a Linnet which I will put up, £100 that he fails to judge a Linnet contest correctly, £100 that I tell him every note a Linnet sings, and, fourthly, I will sing him for another £100—£400 in all. If he cannot find £400, I will accept the largest amount he can find. I have deposited a cheque for £25 with "Cage Birds" to make the challenge good, the Editor to appoint the judge. If Mr. Day wins he can do what he likes with the winnings. If I win, the Editor can give them to any War Charity he favours. I will pay the judge £5 for expenses. Now, Mr. Day, I fail to see how you can refuse these challenges. If the same were issued to me I would jump at them. As both of us are dealers, I am not challenging the Fancy. I am cager to prove my ability to judge anything, and not copy advts.

FRED ALLEN,
156, PORTER ST., HULL.

P.S.—I am advertising no Linnets until I have proved I am the acknowledged British Bird Champion.

30—YEARS—AGO

Harlesden, May 12th, 1917. Received bird safe. I knew I should have value for money. It is thirty years ago since I first bought birds from you.—H. Gransby.

NOT ANOTHER MAN.

Dublin, May 12th, 1917. I got your birds safely. I will not forget your straightforward action. I think there is not another man in the whole of the country that would act in the same way as you have. —Denis Redmond.

WILL RECOMMEND YOU.

Clydebank, Scotland, May 17, 1917. Got bird complete, quite satisfied. Will recommend you to any of my friends who want birds.—R. MacNair.

THE above are far better than any words of mine as to quality and value for money that I am still supplying. All I will say is: By serving you well I serve myself, so I will leave it at that.—W. R.

FOR SALE.—NORWICH PLAINHEADS, YORKSHIRES, CRESTS AND CRESTBREDS, HIGH-SHOULDERED BELGIANS, MULES, PARROTS. Particulars, stamp, or list free.—**RUDD, Specialist, NORWICH.**

TALKING PARROTS.

Gentlemen, if you want a good, honest talking Parrot, try one of mine on approval. I have a grand lot of African Greys, talking wonderfully, whistling, etc., and all acclimatised on hard seed and water, £3, £4, and a few extra free talkers, £5, £6 each. Brilliant Amazons, whistling, talking, mimicing, etc., 40/-, 45/- 50/- 60/- each, one a beauty says over 30 words £4 10/-. Rosella very tame, kisses, 25/-. Cockatoos, 40/-, 50/-. One pair of large white Swans, 50/-. Hawfinches, 7/6, 10/6, 12/6 each. I offer good honest value at a reasonable price; moreover, I am willing to send all on approval. Try one. I guarantee you will not regret it. I have the largest and choicest stock in the North. I have hundreds of testimonials, and two large batches have been sent to the office of "Cage Birds." We are a patriotic firm, but I want you to try my birds so that they may speak for themselves, and not purchase just because we are patriotic.

WOOD, Medical Specialists, 20, Louis St., Leeds.**

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyrignt.

NOTE TO READERS.
When replying to Advertisements readers will oblige by mentioning paper.

Club Reports.

FIFE C.B.L.

Meeting, Bay Horse Tavern, Lochgelly, May 12. The Lochgelly delegates stated that Lochgelly society was not in favour of combining with other societies in the League in running shows under the name of Fife Cago Birds League. As only Lochgelly delegates were present, it was agreed to let business stand over till next meeting at Coaltown of Wemyss, at the end of July. A vote of thanks to the chair ended the meeting.—Joe Sneddon, Sec.

EAST HAM C.B.S.

Meeting May 10, Town Hall, Mr. H. J. Kybert chair. Owing to the late season it was agreed to postpone annual ramble until June 17. Schedule for first feather show, June 23, was arranged. Several specials were promised. Judge, Mr. H. Dewhurst. Arrangements are being made to hold a series of monthly table shows for Canaries and British, commencing on July 12. Mr. A. Fleet will judge the first show. Members are asked to give these fixtures their hearty support. Next meeting June 14, when Mr. W. L. Taylor has kindly promised to give a demonstration on mixing colour-food, and it is hoped that a good number of members will endeavour to be present.—H. J. Kybert.

PLYMOUTH AND W. COUNTIES.

Meeting, Oddfellows' Hall, Morley Street, May 15, Mr. Finch chair. Election of judges for first nest feather show, May 30, was the principal business, and the following were elected: Yorkshires, Mr. Large; Norwich, Mr. Gill; Crests, Mr. French; Cinnamons and A.O.V. Canaries, Mr. Spillman; British and Foreign, Mr. Pope. Decided that admission to the hall for nest feather shows shall be free, and we hope to have a record attendance. A hearty welcome will be given to non-members, or anyone interested in the hobby, and members will be pleased to give their advice free on any subject. Next meeting, June 19, when the deferred discussion on our annual show will take place, and we hope to have the advice of all those interested.—O. Moffitt, hon. sec.

PORTH AND RHONDDA VALLEYS

General meeting May 17, at headquarters, Mr. Hollingshead chair. Several letters were read, and we were sorry to hear that Mr. T. James had decided to sell all his birds. We trust he may soon take up the hobby again. Sec. was instructed to write several gentlemen re judging First Feather show, June 9, which will be held at the Llwyncelyn Hotel, Porth; birds to be staged by 5 p.m. There will be 13 classes for Canaries—two for Mules and Hybrids, one Selling, and seven British. Mr. Richard Gilbert and J. Russell were elected members. There have been a few slight alterations to the rules, and new rule cards have been printed. It is very important that every member should attend the next meeting, May 31, at 7. Those who have promised to join kindly attend, and a hearty welcome is extended to any fancier in the Rhondda Valleys.—A. H. C. Legg, Hon. Sec.

S. WALES AND MON. FED.

Meeting, Elysium, Swansea, April 28, Mr. J. E. Jeffreys presiding, with a fairly good attendance of delegates. Election of officers for 1917: Chair, J. E. Jeffreys; vice, D. Evans; treas., Tom Lack; sec., C. Richards, on retirement of A. A. Gordon McLucas. Resolved to invite all S. Wales and Mon. societies to join the Federation, and try and improve our Welsh shows in the coming show season. Last year we had a few shows in Wales which clashed, and I am sure that most societies will agree that when two shows clash neither are likely to be a great success. The Federation have five cups to be competed for, and the annual fee is 5s. Will Welsh societies send along their fee for 1917 and the date for their next show? Our next meeting is at Neath, June 30. Time and place will appear in these columns. All correspondence should be addressed to the sec., C. Richards, 7, Gilfach Road, Penygraig, Rhondda.

BRITISH ROLLER C.C.

Annual general meeting headquarters, May 8, Mr. F. A Lester (president) in the chair, and a splendid muster present. Election of three new members, also confirmation of ten new members. The result of election of officers was announced:—Pres., Mr. F. A. Lester; vice-pres., Mr. F. E. Fisher; hon. sec. and treas., Mr. J. W. Norris; committee, Messrs. Attewell, Aspinall, Bloomfield, Buffin, Dughill, Goodyng, Gutierrez, Hocking, Nicholls, Peters, Robinson, and Webb. Messrs. Attewell and Buffin were elected auditors for the year, and scrutineers of the voting papers. Mr. Attewell read the report of the balance-sheet, which showed a balance of £11 16s. 5d., and was considered very satisfactory. The following gentlemen were elected Vice-presidents: Messrs. Buffin, Gutierrez, Hocking, Ives, Netherwood, Shepley, Whittlestone, and Willows. Letters were read re holding a conference for holding shows, and a new system for the young bird competition, and the question of allowing federated rings to compete in the young bird classes, this matter to be brought up at the conference. Decided that Messrs. Lester and Norris be the delegates for same. Suggestions on the voting papers were gone into, and will be acted on where practicable. A hearty vote of thanks to the auditors was carried unanimously, also to Mr. Lester for presiding over the meeting.—J. W. Norris, Sec.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

HULL ROLLER C.C.

Meeting, headquarters, Aigle House, Anlaby Rd., Hull, Mr. Burns chair, before a good muster. Items of interest were discussed and a pleasant evening was passed. More new members were enrolled, and a committee was formed for the judging standard. Several birds will be present at our next meeting and tours explained by one of our members.—A. Baggaley, Sec.

NEWCASTLE-ON-TYNE (E. End).

Meeting, Blue Bell Inn, Shield Road, May 10. Chair, Mr. Geo. MacPartling. To consider whether it would be advisable to carry on the business of the society until the end of the war. After a good deal of discussion it was decided to hold no more meetings during the summer months, and the Sec. was to inform the members through CAGE BIRDS when the meetings were again resumed, probably at the August meeting. Members please note.—Ed. Coltman, Sec.

CITY OF BIRMINGHAM C.B.S.

Meeting, May 2, Mr. A. Broadhurst, chair, and only seven members present, owing to stress of war work, etc. Mr. de Maillet reported that he had received a letter from the Hon. Sec., Mr. A. C. Shirley, resigning his position as he had now joined up in the Army Service Corps. The resignation was accepted with regret, and a vote of thanks passed for the valuable services he had rendered to the Society in building up the membership and placing the society in a sound financial position. No one present would accept office, and the meeting agreed to postpone the monthly meetings until the first Wednesday in September, the committee to arrange classes and judges for Nest Feather show, the members to be advised by post of same, also date. Mr. W. Wilson was elected a member. Correspondence for the present should be sent to the chairman, at 85, Hockley Hill, Birmingham, who will deal with same.—J. H. de Maillet, Vice-pres.

CARDIFF C.B.S.

Meeting, Club Room, May 15, the Rev. C. B. Jolliffe presided, and the meeting was well attended. The first half hour was taken up by the Thrift Club; members who wish to join the Thrift Club please communicate with the Rev. C. B. Jolliffe, who has undertaken the secretarial duties. Resolved that the first young bird show be held in June. Judges, Mr. T. H. Mellnish, Yorks.; Mr. H. C. Smith, British, Mules and Borders; Rev. C. B. Jolliffe, Norwich. Entry fee 3d., no prize-money, only cards. Members wishing to give a special kindly send on as soon as possible. Mr. H. C. Smith read a paper giving his practical experience as a breeder and exhibitor. Mr. Smith, being in the seed trade, was able to give us the chemical properties of the different seeds; he handled his subject in masterly style, and answered all questions satisfactorily. A hearty vote of thanks was passed to Mr. Smith for his excellent paper, which was agreed by all as the most instructive and interesting paper that had been read at our meetings. Absent members missed a treat.—E. Thomas, Sec.

GLASGOW (West End) C.B.C.

Meeting May 11, Co-operative Hall, St. George's Cross, Mr. P. Allan presiding over a good attendance. It was intimated by the secretary that one of our members, Mr. John McGarry, had won the Military Medal for bravery on the field, but unfortunately had been wounded since, and was now lying in hospital in Kent. The members were all very pleased to hear of his decoration, and hoped he would soon be restored to his usual health. New members were enrolled: W. Shields, R. Dee, A. Shanks, and J. Atkinson. Members present were treated to a very interesting paper on "Canary-keeping as a Hobby," by the sec., Mr. J. Campbell, who gave his personal experiences in the buying, pairing, and rearing of Canaries extending over a period of 20 years. After the reading a discussion took place which was of great interest to the young fanciers present. The lecturer was accorded a hearty vote of thanks, and with the usual vote of thanks to the chair the meeting was brought to a close. Next meeting June 8, Co-operative Hall, St. George's Cross, at 8, when we hope to have another pleasant evening.—J. Campbell, Sec. and Treas.

YORKSHIRE UNION OF C.B.S.

The first meeting of the newly-elected Council took place on May 19. The incoming President (Mr. H. J. Chittenden) took the chair, and thanked the delegates for the position they had placed him in. It was rather a difficult time, and it would require all our efforts to keep the cage bird fancy rolling. Our best wishes, he said, go out to all the fanciers that have answered the call of King and Country, and he felt sure that if they were good fanciers they would be good fighters. The disappointments of the cage bird fancy bring out our best qualities, and these will stand him in good stead and fit him for meeting the enemy. Finally, he would like to ask the delegates for their valued support and assistance during the time he was in the chair.

Mr. F. Hammond was re-elected treasurer and thanked the Council for their continued confidence. The following gentlemen were elected to form the sub-committee: Messrs. J. R. Cox, W. B. Atkinson, A. Sutcliffe, G. White, W. Chapman, A. Gledhill, and J. W. Kaberry, along with the President, Treasurer, and Secretary. A letter was read from the Huddersfield society asking to be allowed to withdraw their resignation, and Mr. Hammond, one of the deputation who waited upon the society, expressed his satisfaction at Huddersfield deciding to remain in membership, and said he felt he was voicing the wishes of the whole Council. The Bingley O.S. sent in their resignation, as only six members of the society remained, the others having been called up. This was accepted with regret. The full patronage of the Union was again granted to the Sheffield O.S. open show, Nov. 2 and 3, on the same terms as last year. Mr. Errington again offered two valuable specials in each section for birds moulted on his XL Red Feed, which were accepted with thanks. Decided to offer six gold medals in the novice competition—5 for Yorkshires and 1 for Norwich. In the amateur section three gold medals were put up for competition. Members' fees were fixed at 8d. The sliding scale to continue in force as last year. Decided that we invite tenders for the printing of the Union handbook from the following firms: L. Hodgson, White, and J. C. Southwart.

The result of the ballot for judges for next season resulted as follows:—Oct. 13, Tong, H. W. Battye; Oct. 20, Huddersfield, A. Hirst; Oct. 27, Laisterdyke, A. Radley; Nov. 10, Windhill, M. Peel; Nov. 17, Great Horton, H. J. Chittenden; Nov. 24, Bradford East, F. Self; Dec. 1, Halifax, W. A. Cowgill; Dec. 8, Keighley, J. Greaves; Dec. 15, Shipley, P. Mason; Jan. 5, Skelmanthorpe, Dr. Craig; Jan. 12, Bradford West, W. Mundell; Dec. 19, City of Bradford, T. Bennett.—S. Midgley, Hon. Sec.

PONTYPOOL C.B.S.

Meeting, May 12, with a poor attendance through members being on allotments. Decided to hold Nest Feather show on or about July 21, at Three Cranes Hotel, if obtainable; Sec. to make arrangements. Mr. J. Hillman (Abertillery) was given preference for judge. Decided to hold open show, Dec. 14. Carried that Sec. notify all members of next meeting by post. It is hoped there will be a good response and that members will take a more active interest.—W. D. Lewis.

MIDDLESBRO' AND TEES-SIDE.

Meeting, May 19, Crown Hotel. Mr. Dodsworth presided. Decided to hold weekly rambles with the idea of bringing members together and getting in closer touch with one another. Our first outing will be to Great Ayton and Kildale by 'bus, leaving G.P.O., Middlesbro', at 2 by special car. As our President is familiar with the district, he has kindly consented to escort the party on the journey, and we hope as many members and friends will turn up as possible. A hearty welcome is extended to any and all lovers of the feathered tribe.—F. Stothard, Reporter.

BARROW C.B.S.

Special meeting, May 19, Mr. S. Smith presiding over a good turn-out of members. Open show classification was thoroughly dealt with with a view of making a good schedule to suit the Fancy in general, as it is our desire to make our show one worth patronising and to bring it back to its former place in the Fancy—the once Palace of the North. With the following classification I think it will suit all: Fifteen champion Yorks. classes, seven novice, nine champ. Norwich, seven novice, four Scotch Fancy, seventeen champ. Border, seven novice, one A.O.V. Bord., five Mule or Hybrid, fourteen British, four selling, one gift, one Foreign, four champion Cinnamon Norwich, two Green—93 classes in all, and four of the most popular judges of the day. There are a good number of guaranteed classes and more to follow. Specials in galore, so keep your eye on Barrow.—McFarlane and Tranter, Joint Sec.

COUNTRY RAMBLES.

GLASGOW AND WEST COUNTIES NORWICH CANARY CLUB.

The weather clerk was on his worst behaviour on the occasion of the first ramble of the season to Bridge of Weir, May 19, and this had a telling effect on the turn-out, a small but select party making the journey. President Dinwoodie had made arrangements with a local fancier, Mr. W. Kidd, to act as guide for the day, but Mr. Kidd, not feeling up to concert pitch, handed us over to two local egg collectors, Messrs. J. Keir and T. Howie, and right well did they perform their duty.

Making our way to Barcraig Wood, the first glimpse of bird life we espied was a Pied Wagtail sitting on the coppice of the water works. Flitting about were a goodly number of Chaffinches and Greenfinches, looking very fit and busy over their domestic duties. Once in Barcraig Wood, the ravages of recent storms were clearly demonstrated. Mr. T. Howie was the first to see a nest, that of a Chaffinch, with four eggs, that had all the appearance of being hatched in a day or so. The next nest to come under observation was that of a Mavis with eggs, which was placed to the credit of Mr. J. Keir, and nests of the Blackbird, Mavis, Chaffinch, and Greenfinch were not uncommon. Prior to leaving Barcraig, Mr. Howie gave us a lesson on tree climbing, when he notified the party that he saw a Magpie with four young, possibly a week old; this exhibition was both instructive and amusing.

We now found ourselves on the moor, when the plaintive call of the Curlew was heard. Missel Thrushes and Magpies were seen on the wing, and we also had a grand sight of the Redshank strutting about at his leisure. The Melody of the Skylark was heard, whilst the call of the Cuckoo and the Peewit lent a tone to the surroundings. Our guides next took us along the banks of the Locher Burn, where Wagtails abound in variety. We saw the Grey, the Pied, and the Yellow, and one of our guides, Mr. Keir, assured us that he had seen the Blueheaded Wagtail repeatedly in the vicinity.

After we had strolled along the banks of the burn we got nearer civilisation, and reached the roadway, which, by the milestone, placed us 2⅝ miles from our destination, the Bridge of Weir. The season being very backward, and the hedgerows bare of foliage, very little amusement was provided on our way home, the only noticeable item being a Chaffinch's nest in active preparation.

The Gryffe flows slowly past, and the disciples of Isaac Walton were to all appearance having a good time. The Orphan Homes of Scotland were seen in the distance, an imposing structure with beautifully laid-out grounds. As it is over 40 years since the writer saw this palatial edifice, he missed the "Old Ship," which was used as a training ground for the boys, but was acquainted by Mr. Keir that it was removed several years ago.

We now found ourselves in Bridge of Weir, and at once proceeded to inspect Mr. Kidd's stock. He is an out-and-out Plainhead fancier, and, being a native of Forfar, he cannot do without his Bantams. His Norwich are a pretty level lot, the outstanding pair being a yellow cock and a buff hen, winners of 1st at Paisley Club. He holds one of the Society's cups, and, given a slice of luck, he should retain this, and possibly add to his laurels. We now find ourselves in Mr. Kidd's cosy parlour, enjoying the cup that cheers, and which was highly acceptable and thoroughly appreciated.

Time was getting on, and we had another call to make, on Mr. Emmerson, another noted egg collector. His collection is a large and varied one, consisting mostly of the rarer birds, and birds of prey such as Golden Eagles, Kestrels, Hawks, Sparrow Hawks, Merlins, Horned and Tawny Owls, Hooded Crows, Wheatears, Stone and Whin Chats, the Wagtail family, etc. He has also a Hooded Crow and a Magpie; the former can say "Maggie" very plainly.

Train time was now approaching, and our newly found friends saw us off and wished us an early return to Bridge of Weir, when they would be delighted to show us another route, where the smaller birds are more abundant, and by that time nests would be more plentiful. I take this opportunity of again thanking Mr. and Mrs. Kidd for their hospitality, and Messrs. Keir and Howie for kindly showing us round. We arrived in the city before 10 o'clock, after having thoroughly enjoyed the day's outing.—J. H. Adam, Sec.

Many Miles; No Nests.

Sunday, May 6, will be long remembered by those members of the North Liverpool C.B.S. and their friends who were fortunate enough to attend the Wallasey ramble. From 8.30 a.m. till 8.30 p.m. was one continuous feast of fresh air, but the ramblers searched the hedgerows and hillsides, the copse and common, for many miles without discovering a new nest. Building operations had not yet begun, owing to the prolonged winter, and during the entire ramble not more than a score of birds were seen or heard, though the jovial party were all eyes and ears. Several well-known members were conspicuous by their absence, Jack Metcalfe (now in the Army and at Preston, together with ex-President McCoy) being greatly missed. The invitation extended to the Wallasey C.B.S. proved abortive, though the new Birkenhead Club was represented.

Starting from Bidston Church, the party headed by A. E. Wilkins and H. Holden, made tracks for the noted woods about a quarter of a mile away, and here they roamed in quest of bird life. A beautiful Jay was sighted with the aid of the field glasses. Emerging from the woods, and following the well-kept road, they came upon a few more members and friends who had preceded them, and the increased party went merrily forward. Woodchurch Post Office, a converted cottage of some official dignity, was soon passed, and no little amusement was derived from occasional spells of road hockey, one of the most appetising and exhilarating forms of travel sport.

Lunch was partaken of at the "Horse and Jockey," Irby (and none too soon), after which the footpath over the hill was followed. A fairly large copse hereabouts was diligently explored without success, the trees being almost naked. Two miles further on a densely furze clothed disused quarry was passed through, and after crossing the valley the extensive Thurstaston Common was traversed. The only excitement was the chase and capture of a land lizard. Half an hour's loll on the tinder-dry bracken and off again. More lanes, more hockey, and then a bird! This time a hen Reed Bunting. Later a Flycatcher was seen at work. More miles, and then tea at the Farmers' Inn. The sun was sinking as the now semi-tired ramblers proceeded towards Frankby and Greasby, thence to Upton Rly. Station, and as the train was not due for an hour or so the journey was continued on foot to Bidston, thence per electric car to Woodside Ferry, and across to Liverpool by boat. All arrived home safely, including the lizard, after a twelve hours' ramble, having walked some sixteen miles.

Halifax O.S.

On May 19 members and friends of the Halifax O.S. spent a pleasant afternoon and evening in the woods and fields around Harden, near Bingley. The weather was moist, but at times the rain held up, and the saunter by Goit Stock Waterfall, through Woolly Rings Glades, and the woodlands surrounding, was keenly enjoyed. Nature was at her best, and bird song was plentiful, but rain came again after tea, and the intended route to Cottingley and Saltaire was abandoned, home being reached by way of Cullingworth Station, Denholme, and Causeway Foot. The nests found were mostly those of the Blackbird and Hedge Sparrow, all with eggs. Among the birds seen were Willow Wrens, Sandpipers, Pied Wagtails, Waterhens, Titlarks, Skylarks, Plovers, Blue Tits, and Robins, while the call of the Cuckoo was many times heard. From Causeway Foot Halifax was reached by tramcar after a ramble which, despite unfavourable weather at times, was enjoyed by all.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

England.

Oct. 19-20.—**Newcastle C.B.S.**—(F. W. Laidlow, 55, Colston St., Benwell, Newcastle-on-Tyne.)

Nov. 1.—**Blaenavon C.B.S.**—(Geo. Broome, 82, King St.)

Nov. 3 5.—**Leicester Hand-in Hand C.B.S.**—(E. H. Hulse, 23, Hartington Rd.) J.R., C.H.

Nov. 9-10.—**Ardwick and Manchester C.B.S.**—(A. E. Thorpe, 28, Park Grove, Levenshulme.) J.R., H.W.B., J.B.

Nov. 14.—**Coventry O.S.**—(J. Kent. 91, Villiers St., Stoke, Coventry.)

Dec. 7-8.—**Barrow C.B.A.**—(D. McFarlane and M. Franter, 26, Lord Roberts St., Vickerstown, Barrow-in-Furness.) J.R., H.W.B., J.B., J.M.

Wales.

Oct. 24.—**Abertillery C.B.S.**—(J. Webber, Nant-y-Graig, East Side, Cwmtillery, Abertillery).

Oct. 27.—**Landore Plasmore C.B.S.**—(H. Fry, 22, Plasmarl Terrace, Plasmarl, Swansea.)

Nov. 10.—**Skewen C.B.S.**—(T. Pattinson, 177, New Rd., Skewen, nr. Neath, S. Wales.)

Nov. 15.—**Swansea C.B.A.**—(J. H. Ford, 83, Norfolk St.) D.J., S.J.N.

Nov. 21.—**Maesteg C.B.S.**—(C. Williams, 247, Bridgend Rd.)

CAGE BIRDS, 154, FLEET STREET, LONDON.

Cage Birds
and Bird World.

A Guaranteed Circulation amongst 50,000 readers weekly

Offices: 154, FLEET STREET, *London, E.C.4.*
Telegrams—"Aviculture, Fleet, London."
Tel. No. 5229 Holborn.

The Editor is always glad to receive and consider suitable contributions, whether articles, sketches, or photographs. Provided an addressed envelope, sufficiently stamped, accompanies same, every effort will be made to return unaccepted contributions promptly, but he does not in any case hold himself responsible for their safety.

All matter intended for publication must be written or typed on one side of paper only, must be authenticated with the proper name and address of the sender, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

Mr. E. Hughes, of Penygraig, is down to judge the cage birds at the Mid-Rhondda Show, July 7, writes C. Dinham, Hon. Sec.

At the last meeting of the South West London C.B.S., writes Mr. Lilley, the date for the autumn show was fixed for Nov. 21, and the young bird show July 18. Judge, Mr. J. Robson.

Mr. E. Whitman, chairman of Penygraig C.B.S. writes that Mr. Ellis Hughes, Penygraig, has been elected as judge for the First Feather show June 16.

Keeping the Flag Flying.

As will be seen by the report in another column of the meeting of the Barrow C.B.A., a grand schedule of 98 classes has been arranged for the open show of the Society, Dec. 7-8.

Spring is Here!

There is song to-day in satiety out on the marshland, in the broad reed-bed beside the stream; for the restless little Sedge-Warblers are back in their summer haunts, singing away the sunny hours as they flit among the stems and search for their food. The cool, brisk wind bends the reeds and roughs the water. It drives the Swallows to the cattle grounds and the lee of the woods and the tree belts. It slows down the march of the flowers of spring and discourages the opening leaves. But when the Sedge-Warblers once begin their season of song it must be harsh weather indeed that will silence them.

When this songster of the waterside first fills his white throat it is much as when the Cuckoo first calls across the fields and the Swallow darts twittering down the village street. You feel that it is a definite mark of the season. Then let the cool wind bustle the reeds and the water and the laggard kingcups. It will not be for long. The sun is fervid above, and in the bleak world of the marsh, where last she enters, Spring is walking.

P. W. D. I., in "The Daily Mail."

A Correction.

The announcement of our Ramble on Saturday next, writes Mr. A. Sutcliffe, Sec., Halifax C.B.S., gives the time of meeting at Halifax Station 2.40, and the departure of train 2.50. I am sorry, but I must have made a mistake, as it should read 1.40 and 1.50.

Bird Show in New Zealand.

The Dominion Canary Specialist Club are holding a show at Wellington, New Zealand, on May 25 and 26, and a schedule has been arranged that should be gratifying to all Canary sections affiliated with the North and South Island Associations. The D.C.S. Club expect to make a distribution of £60 or £70 in cash prizes, and several cups. Mr. W. H. Lindley, of Gisborne (late of England), will judge.

[Mr. Lindley, the judge, says that CAGE BIRDS is eagerly looked for each week in New Zealand, and his son, Mr. E. Lindley, promises a report of the show for our columns.]

A Secretary Wanted.

Mr. J. H. de Maillet, Vice-President of the City of Birmingham C.B.S., wishes us to say that a secretary is needed to carry on this old-established Society, and keep it in its present sound financial condition in the absence of Mr. A. C. Shirley, who has joined the Army Service Corps. One alive with enthusiasm, tactful, and prepared to sacrifice an amount of time, will meet with a hearty reception by the Society (see Club Reports).

Wrong Address in Advertisement.

In my advert. in CAGE BIRDS dated May 19, page 267, column 1, writes Mr. A. Thomas, you gave my address as No. 1, Ardrigh Road, instead of 10. As No. 1 is an empty house, in all probability some of the letters will be sent back through the dead letter branch of the G.P.O. I should be glad if you will kindly give the correct number, viz., 10.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

Two Useful Grasses.

THE English countryside is never perhaps more beautiful than in the month of May, and just now the meadows in particular, with their beautiful and restful shade of green, are worthy of the greatest admiration. From amongst the myriad blades of grass everywhere, attractive spikes of blossom are pushing forth, and some are already dangling their quivering purple anthers in every passing breeze.

One cannot help reflecting in these times how much we are indebted to the grass family for our sustenance, for no other order can rival this in its utility to man. Not only our own cultivated cereals, however, and the maize and rice of warmer climes, possess these valuable nutritive properties, but also many of our common wild grasses produce seeds of considerable merit in this respect, and since they are to be found in any quantity in all parts of our land, I propose to describe from time to time a few varieties which have long been used by those bird-keepers who are sufficiently interested and enterprising to devote their attention to such matters.

Grass seeds, of course, will not be ripe enough for gathering and harvesting for some time to come, but it is always an advantage in this hobby to know your specimens at all stages of their life, for very often it happens that at the most useful periods of their life-history they are not only inconspicuous, but difficult to identify with any degree of certainty by amateurs.

When Found, Make a Note of it.

It is also a great advantage to make a note of certain areas in one's locality where useful plants have been observed. One often sees in a country ramble large masses of bird-plants in their early stages of growth, and mentally determines to revisit the spot at a later date, but too frequently nothing unfortunately comes of the good intentions, in this as as in other walks of life.

A small note book is an invaluable aid in this direction, and one should never pass a dazzling clump of coltsfoot blossoms, or dandelions, or even hawthorn and hosts of other flowers without jotting down the locality, date, stage of plant, and perhaps also an estimate as to the probable date of the "harvest." A book of this kind becomes in the course of a year or so an indispensable companion to the wild seed collector, and will be the means of sparing him many a profitless tramp by field and hedgerow.

One of our earliest grasses to burst into flower is a variety known as sweet vernal grass (Anthoxanthum odoratum L.), which occurs plentifully in meadows and pastures throughout the whole of Great Britain, and even ascends to some 3,000 or 4,000 feet in the Highlands.

Both its popular and specific names are derived from its possessing an aromatic principle known as coumarin, which imparts the well known and characteristic fragrance to new-mown hay. A bunch of it, if suspended in one's room will bring memories of the countryside into the heart of a busy city, and it is often used in this way by those who are able to identify the plant.

The general appearance of the flowering spike is shown at B in the sketch. An average plant attains the height of about fifteen inches, and the flower-spike varies in length from one to four or five inches. It is an erect, shining plant, with conspicuously hairy leaves, and crowds of little purple (or rarely yellow) anthers on hair-like threads, which, however, soon fall away after their pollen has been shed. The head then loses its purplish appearance, and gradually passes to a yellowish brown, at which stage the seeds are ready for immediate harvesting.

Another well known and useful species of grass is also illustrated (A), and specimens may be found in plenty by almost all waysides, and in meadows and waste places everywhere. It is known as the perennial rye grass, or way bent (Lolium perenne L.),

A., Rye Grass. B., Sweet Vernal Grass.

and its characteristic spikes, beloved of all children, are now becoming conspicuous everywhere.

The stem commonly reaches a height of about eighteen inches, and the spike of flowers may be anything up to a foot in length. The zigzag stem, the alternate arrangement of the little spikelets, and the leafy runners should also be noted.

A Necessary Caution.

This grass is known in some districts as the red darnel, but it should not be confounded with the true or bearded darnel (Lolium temulentum L.), which occurs rather rarely in our cornfields. The seeds of the true darnel are very poisonous, and numerous cases of severe illness are on record as a result of eating bread and other foods made from flour containing them, as they are sometimes ground up with the corn.

It should be noted that the true darnel does not grow in meadows with the rye grass, but in cultivated fields, though for the sake of obviating unhappy results the following points of distinction may be found useful: The leafy runners referred to in the rye grass are *absent* in the darnel (which is an *annual* plant), and while the little spikelets of rye grass have very *short* awns, those of the darnel usually have very *long* ones, from which its name of bearded darnel has been derived.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor," CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

The Haslingden Roller Club have fixed their annual open show for Nov. 30 and Dec. 1, writes Mr. T. Nuttall, sec. Secretaries please note, to avoid clashing of show dates.

Kindly allow me, through your valuable paper, writes Mr. J. W. Metcalfe, late of Liverpool, to thank all those fanciers who have supported my wife by still patronising my shop while I have been in the Army. It is a comfort to a soldier to think, if he should have the luck to get back home again, he will have a start in life without having to fight for his trade again. I should like to have a birdy chat with any fancier who cares to drop me a line to 229359 Driver J. W. Metcalfe, D Sub., 9th Battery R.F.A., Fulwood Barracks, Preston.

The National British Bird and Mule Club ramble for Thursday, May 17, was abandoned owing to the heavy downpour of rain, and the proposed Whitsun ramble to the New Forest has also been abandoned. The annual outing to Gomshall will take place on Saturday, June 2; train leaves London Bridge (Low Level) 9.35. Friends and fanciers invited. Gentlemen had better provide themselves with light lunch; a meat tea will be provided in the evening. Those wishing to join the party are kindly asked to send their names not later than Wednesday, May 30, to T. R. Trower, 442, Caledonian Road, London, N.

OBITUARY.

MR. F. SLOCOMBE (Cardiff).

It is with deep regret, writes Mr. E. Thomas, sec. Cardiff C.B.S., that I have to inform you of the death of a well-known Cardiff fancier, Mr. F. Slocombe, who had been in poor health for some time. On behalf of the Cardiff C.B.S. I extend to Mrs. Slocombe and family our deepest sympathy in their great sorrow.

HOW NEWS TRAVELS.

In September last Mr. J. P. Carr, late hon. sec. of the National British Bird and Mule Club, took for the inspection of the committee of that club a delightfully pretty Blackcap, which had assumed abnormal plumage The occurrence was reported in CAGE BIRDS of Oct. 7 last, and the bird was fully described under the heading "A Marvellous British Bird."

"J. G." in "The Scotsman" of May 2, says "at a recent meeting," etc., and gives an account which is mostly a paraphrase of the report which appeared in CAGE BIRDS seven months ago, and in order to get more up-to-date news of this intensely interesting bird we wrote to Mr. Carr on the subject. Appended is his reply:—

"This bird came into my possession at the end of August, 1916, in its nest feather. It moulted into normal adult plumage in about two months, and in a very short time was in full song. About the end of May, 1916, the bird, a five-year-old Blackcap, and a Robin sang at one another so loudly that we could not stand the noise indoors, so I turned them all into a small garden aviary.

"All went well for a few weeks, but going to feed them one morning I found the old Blackcap dead in the aviary, and was at a loss to know the cause. Arriving home a few days afterwards my wife said that if I did not take the other Blackcap out of the aviary, the Robin would kill it, as she had seen them fighting several times that day. I at once came to the conclusion that the Robin had killed the old Blackcap, so I caught the young Blackcap next morning and caged him indoors, and not before it was time by the look of its plumage.

"About a week after caging, it commenced to moult, white feathers appearing on its back, and by the middle of September it assumed the following plumage:—The whole of the body, with the exception of a few normal-coloured feathers in the back, pure snow white. The wings and tail feathers, and greater part of the cap normal colour.

"I looked through all the bird books and papers I had in my possession, and Mr. Lott, Mr. Crabb, and Mr. Puck made enquiries, and went through all their books and papers, but could not find any record of a single Albino or abnormally-coloured Blackcap. On Sept. 28 last I took this bird to a meeting of the National British Bird and Mule Club. Messrs. Cooper, Fulljames, Maxwell and Robson were amongst those present, and they all said it was the first abnormal-coloured Blackcap that they had heard of, so I claim it to be the first specimen that has ever been known.

"I fully intended to send it to one or two London shows last season, so that the public would have had a chance of seeing this unique specimen, but having to work so late I could not manage it. I might say that he is still in the best of health and song, and if I have the good fortune to moult him again I will let you know what he looks like."

SOMETHING LIKE A START.

This magnificent unflighted Yellow Yorkshire Canary won in one month November last, for its owner, Mr. D. Eadie, London, 1st and special at Queen's Park, 1st and special at the show of the City and Suburban A.C.B., 1st at St. Quintin's Park, and also the Five Guinea Challenge Cup for the best bird bred by a member.

The Thrush as Traveller.

By the Hon. GLADYS GRAHAM MURRAY.

This informative and very interesting article appeared in the *Saturday Review* of April 7, and is reproduced for the benefit of our readers by special permission of the Editor of that paper.

THE Song Thrush or Mavis is perhaps the favourite of all our songsters, and richly does he deserve his fame. To describe in words the song of a bird is well-nigh impossible, but Macgillivray in his great history of birds gave us perhaps the cleverest and closest written imitation of the Mavis.

Henley wrote that "the Blackbird plays on his boxwood flute," a charming description, which applies equally to the song of the Thrush. Clear and rich are the notes that trill from out his throat, whilst early and late does he pour forth his song in a rapture rich and mellow, full of the promise of the joys that are to be—

"Stand there and hear the birds' quiet singing
That tells us what life is, so clear."

An Untiring Songster.

One author says he has heard the Thrush in song in England in every month save August, whilst he tells us that one bird was timed and sang sixteen hours out of the twenty-four.

The Song Thrush, known south of the Tweed as the Throstle and in Scotland as the Mavis, is an early nester, building in many situations. The nest is made of twigs, dead grass and moss, lined with a coating of clay or wet mud and finished off with another lining of rotten wood, etc. Herein are deposited those four to six frail beautiful blue eggs.

The Thrush's menu is a varied one: berries, worms and grubs are the chief items, whilst snails are included; the bird obtains the snails by striking the shells on a stone and then extracting the contents. Such stones are known as Thrushes' anvils, and are easily recognised by the quantity of shells which lie all around.

Such is the bird at home—the Mavis of our glens and woods, the Throstle of our coppices and coverts. To view the Thrush as a traveller is to approach him from a different aspect; here he is an inmate of our lanes and gardens, a sharer of our daily lives, there he is a winged voyager, a "traveller of the uncharted." The little bird of the speckled breast is truly a native of Britain, living its life and rearing its young in our homeland;; yet he is a real traveller, a regular migrant. His migrations may be described as (1) partial and local movements; (2) regular journeys.

As to the first type of migration, it may well be a mere local shifting of quarters; for instance, in Scotland north of Dunkeld (a little town at the entrance of the Highlands) the Song Thrush is absent during December, the latter half of November and early January (only a stray bird being occasionally seen), whilst during the rest of the year great numbers are to be found there. Crossing the Forth and entering Midlothian we at once meet the Song Thrush (though in lesser numbers than later in the year).

Winter Visitors.

The birds we see in December are probably different individuals from those we watched during the long summer days. The latter may have flowed southwards, whilst their place has been taken by birds who nested further north. Thus there is a perpetual "va-et-vient" among the Throstles, a shifting from land and coppice, from lawn and thicket, a series of local journeys.

It is when we come to study the other type of migration that we learn how the Thrush delights "to travel the uncharted." These are no mere local flights, they are regular journeys covering great distances and of much complexity. The migrations, though of a very varied and complex nature, may be reckoned fairly typical of the voyages performed by that group of British birds which, like the Thrush, are partial migrants.

It is apt to be forgotten that the Thrush, as well as being a resident in some localities and a summer visitor to others, is also a winter visitor to the British Isles, and in some cases a winter migrant.

The Thrush's travels are extensive, prolonged, and complex, therefore it is best to consider first the autumn emigration of British summer visitors. In certain districts the Thrush is a permanent resident throughout the year, more especially in gardens, parks, and in the vicinity of towns; but these birds only represent a moiety.

At summer's close a large number of the birds which have nested with us (especially those inhabiting northern districts) begin to emigrate to the south. As summer turns to autumn these flittings become more pronounced and complex; for then the Thrush affiliates himself with other species of birds, all veering southwards, choosing the night hours to quit our shores.

Mixed Company.

Towards the end of September the Thrush, in company with Bramblings, Siskins, Goldcrests, and others, arrives as an autumn immigrant and bird of passage. These inpourings continue steadily throughout October and November, and sometimes for three or four successive days great "rushes" will occur, when hundreds of birds arrive in companies, pouring in upon our Northern and Eastern coast. These immigratory movements are to be noticed on the East Coast of Britain from the Shetland Isles to Norfolk as well as on the West Coast, including Ireland and the various western isles off Scotland, such as St. Hilda.

The Thrush's travelling companions include the Redwing, Fieldfare, Ring Ouzel, and Blackbird. These birds fly over the wide and open sea, often in great numbers, destroying themselves against the window panes of the lighthouses and lightships that they pass en route.

Another stream of autumn immigrants cross the southern waters of the North Sea by an east and west route from the coast of Holland to that of south-eastern England. These great rushes usually occur during September and October, and between midnight and 4 a.m.

A singular fact is recorded by Mr. Eagle Clarke (whose researches have added so much to our knowledge of migration), namely, that the travelling companions of the Thrushes which come by this latter route are entirely different species from those which accompanied the northern stream of migrants.

November heralds the great emigratory movements of the winter, which continue during December, January, and February. These go on throughout successive days and nights often for some days at a time. The first move is then to the coast, especially to the West Coast, some birds remaining to pass along both the East and West Coasts of Britain, and thus sweeping across the Channel and Ireland or the Continent.

Home, Sweet Home.

Following this movement comes the spring immigration of summer visitors. The records of February show that certain of the Thrushes which left us in autumn, in order to winter in the South, now return to the British Isles before nesting. These return movements continue during early March, the Thrushes arriving in small parties (during the night or early morning) along with Blackbirds, Larks, Pipits, Starlings, Lapwings, and Curlews. In most cases the return is gradual, but now and again rushes occur, when birds arrive in large parties. At the same time there is a certain amount of local migration, birds from one county shifting to another, often turning northwards from their southern winter quarters.

The middle of March heralds the spring emigration of winter visitors. Then those birds which have wintered in our islands quit our shores to return to their summer haunts in Northern and Central Europe. These journeys continue throughout April, and great numbers of birds in large companies wend their way to their nesting quarters.

Lastly, I must notice the spring passage of the Thrush to Northern Europe, which begins towards the end of March, when the birds which have wintered in South-Western Europe turn north to their breeding quarters. This passage movement continues throughout April and May, when the Song Thrushes are accompanied by parties of Missel Thrushes, Redstarts, Warblers, Skylarks, and others.

The Essentials of Aviculture.

By J. W. N.

(Continued from page 185.)

A Series of comprehensive articles, embracing the proper management of all kinds of birds in captivity, their housing, feeding, general management and diseases, and the breeding of species, Mules and Hybrids. In this concluding portion the author gives in tabulated form short instructions for the proper keeping and feeding of birds in captivity.

IT is beyond the scope of these articles to give a full account of all the birds that are likely to fall into the hands of an aviculturist, so I shall simply confine myself to an account of their food and any special point that calls for comment. The stock mixtures referred to in the following list are described in the chapter on "The Feeding of Birds." To avoid confusion the birds have been arranged in alphabetical order.

British Birds.

BLACKBIRD.—Cocks are very quarrelsome, so one in an aviary or cage is ample. The largest Softbill cage is necessary, and provision must be made for frequent bathing. First year birds have a tinge of brown in them, and are not the dull glossy-black of the adults. *Food*: Large Softbill mixture. *Extras*: Insects such as worms, beetles, cockroaches, slugs, caterpillars, etc. Fruit as apple, raspberries, strawberries, or in fact all garden and wild fruits and berries are greedily eaten. It does not matter if they are slightly decayed, as they seem to prefer them in this condition.

BLACKCAP.—The plumage is very brittle, so great care must be taken to provide a sufficiently large cage to prevent the feathers being chafed. One of the best of the small British songsters. *Food*: Small Softbill mixture. *Extras*: Fruits, all garden and wild fruits and herries. Insects such as mealworms occasionally.

BRAMBLEFINCH.—Does not take very kindly to cage life, so every endeavour should be made to get a young bird. *Food*: British Finch mixture. *Extras*: Finch tit-bits; fruits, berries, beech nuts; insects, a few occasionally.

BULLFINCH.—About the easiest British Finch to steady. Hens are very valuable for hybrid breeding, but should be kept out of sight and hearing of the cocks of their own species; if for that purpose, give a large cage with perches wide apart, as these birds are very apt to get fat and lazy. *Food*: British Finch mixture. *Extras*: British Finch tit-bits. All sorts of buds in season should be liberally supplied, as they form a large part of the diet of these birds when at liberty; garden and wild fruits and berries, especially blackberries and privet berries.

BUNTINGS.—Yellowhammer or Bunting, Cirl Bunting, Corn Bunting, Reed Bunting. *Food*: Canary seed. *Extras*: Finch tit-bits; insects, including mealworms occasionally; seeding grasses daily in season.

CANARY.—*Food*: Canary seed, stock mixture. *Extras*: Fruit, any kind that is eaten; a few linseeds and hemp lightly cracked are permissible during winter months.

CHAFFINCH.—Very difficult to hand-rear, and unless caught young proves difficult to steady as a rule. Where hand-rearing is attempted a large percentage of insectivorous food should be used. *Food*: British Finch mixture, British Finch tit-bits; insects, mealworms or other insects occasionally; fruit, wild berries and beech-nuts, of which he is very fond. As a rule, little preference is shown for fruit, but where eaten it should be liberally supplied.

CHOUGH.—Becoming very rare during the last few years. Should have a large cage or small aviary to himself. Like the Blackbird, colour-feeding *after* the moult improves colour of beak and legs. *Food*: Large Softbill mixture. *Extras*: All sorts of insects. If near the seashore small crabs should be offered. In the wild state it sometimes eats different kinds of grain, and an effort ought to be made to tempt it with some form of fruits.

CROSSBILL.—Not an easy bird to keep in good health and plumage. *Foods*: British Finch mixture. *Extras*: The core of an apple with seeds attached is greedily eaten, and an abundance of this food should be supplied. In the autumn, cones, such as those of the fir tree, are also welcome. Insects can be given occasionally; fruits and berries are usually eaten.

(To be continued.)

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANY THING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. J. Pearson, 12, School Green, Thornton, Bradford.

Why Members' Shows Fail.

Only Economy Necessary.

SIR,—I am sec. to a club in the south-east of London, consisting of about 40 members. We hold three shows every year, and we always make them pay. We pay prize money on the sliding scale, with an entrance fee of 1s. for first cage and 6d. all after, and we deduct 6d. from each entry form for expenses. Catalogues we print ourselves, and charge threepence for. We avoid the printer as much as possible, for it is the printing bill which cripples you. If secs. would only watch their expenses more closely they would find their shows pay.

A SECRETARY.

A Veteran Wood Pigeon.

Twenty-two Years of Cage Life.

SIR,—I thought it might interest your readers to know the following about a tame Wood Pigeon. Twenty-two years ago to-day (May 20) it was taken out of its nest as a squeaker, and has been kept in a small cage about 2 ft. by 3 by 1 ever since, and fed on peas, wheat, and maize. It is quite tame with its owner, who lets it out now and again for a short run, but not with anybody else. Its plumage is still very nice, and it looks as it it was a young bird.

Surely this is a record for a Wood Pigeon? I should like to know through your paper if it is. Wishing CAGE BIRDS every success in these times.

W. L. PARSONS.

A Second Time on Earth.

The Wrong and the Right of Canary Keeping.

SIR,—I have lately had a rather unique experience. Eight years ago next September I sold a songster Canary to a friend, and late last year my friend said it had not sung for some time, and was always dropping feathers. Would I come and look at it? I did so, and found it hanging in a draughty window, in an all-wire brass drawing room cage, and looking a pitiful bundle of feathers.

As it was near moulting time I brought it home and moulted it, giving it plenty of cod liver oil food, and it went through a successful moult, and soon came into full song. It came along so well through the winter that early in March I decided to breed with it, and put it with a hen, which in due course laid five eggs and began to sit on them. I took him away and put him with another, who laid four eggs and sat on them. The former hen brought off and reared five fine strong, healthy youngsters, and the latter four, and both lots are now doing for themselves, whilst the cock bird has just sent another hen to nest with four eggs.

The diet consists of three parts canary to one part rape, with niger and hemp in moderation during the cold weather (birds are kept in a wooden shed in the garden, where the temperature is not much over 40 deg. in winter), and plenty of greenstuff, such as watercress, rape seedlings, or any wild seedlings I can get hold of. When feeding young I give them biscuit and egg mixture, more biscuit than egg, and cracked hemp ad lib, as much as they can eat.

IN-BREEDING:

WHAT IT IS, AND WHAT IT DOES.

A Treatise of the Greatest Interest to all Breeders of Live Stock.

BY

C. A. HOUSE.

Price tenpence, post free, from The Manager, CAGE BIRDS, 154, Fleet Street, London, E.C. 4.

New Society for Tonypandy.

SIR,—Kindly announce that I and a few brother fanciers have started a new society for Tonypandy, which is to be known as the Tonypandy Centre C.B.S. We have been very fortunate in securing our place of meeting, as it has one of the finest club rooms in S. Wales, most suitable for a show.

All interested fanciers wishing to become members are heartily welcome to our next meeting at the White Hart Hotel, Tonypandy, on June 2, at 6.

W. R. WILLIAMS.

Annual Meeting of the Welsh C.B.C.

Can the Time be Altered?

SIR,—Having seen the notice that the annual meeting of the Welsh C.B.S. has been fixed for June 9, at 3 p.m. prompt, at Abergavenny, we would ask our secretary if he could possibly arrange to commence the meeting at 4, in order that we may attend, as we are working in the mines. We do not finish until 2 o'clock, and, working under war conditions, one cannot afford to lose a day or even ask for time off. No doubt it will apply to other members similarly fixed, and we trust to hear he has arranged to overcome our difficulty.

R. F. GRIFFITHS.
G. O. THOMAS.

Wild Seeds for Pet Birds.

How a Lady Bird-lover Uses Them.

SIR.—One has read so many interesting letters in your valuable paper about green food, wild seeds, etc., how to gather, keep, and feed them to our birds, that there does not seem much left to say. Myself, I always find chickweed the most useful all-round green stuff in the breeding season. If you have your birds loose in a room, or in an outdoor aviary, you cannot give too much of this. It is well to gather it by the roots, say a moderate sized bucketful, and just tumble it out on the floor, or arrange it in a large shallow pan of water. Next day the remains may be fed to the fowls, and a fresh supply given.

Groundsel can be given in the same way, and dandelion heads, but never leave them more than the twenty-four hours; if birds are in cages change twice daily. Plantain, hardheads, or shepherd's purse may remain much longer without any ill effects, as of these it is only the seed that is eaten.

When I gather dandelion and thistle seeds, to keep as a store for winter or very early spring, I take a bag or tin box, and those heads that are quite wide open and almost ready to sail away I take hold of, and just a tiny pull brings the seeds away with the fluff. I pack it tightly in the tin box, and long before it is to be gathered next year early nesters have begun, and there is nothing they like better as a lining for nests than the thistle down; it generates a great deal of heat, as anyone may know by holding it lightly in the closed hand for a few minutes.

This and soft string, or rope, cut into inch lengths and unravelled, is all the most fastidious hen wants for a very early nest; she supplements it with pieces of dried seeding grass and other little fanciful things, as the season goes on. I often see complaints of the old birds feather-plucking the young. I have never had one do it, and fancy, perhaps, the use of thistledown has helped to prevent it.

Plantain I gather as it turns brown. I take a pair of scissors, cut it off at the bottom of the stem, and store in a small tin hat box or trunk. The birds like best to pick it from the stem. If it is for present use I usually pick it, if I can, when of a purplish colour; it cannot be overdone when there are young to feed, and without exception they will feed from this seed before any other. It is a pity it is so late in coming into use. Just the common seeding grass is another thing for which they will leave almost any dainty as soon as a bunch is poked between the wires. Enclosed is just a little of the thistledown and dandelion as I gathered it last year. Wishing CAGE BIRDS all success during these troublous times.

(Mrs.) E. M. SARGEANT.

Early Outdoor Canaries.

Another Plymouth Bid for the Record.

SIR,—As a novice I have read with interest the letters in the May 19 issue of CAGE BIRDS referring to the early breeding out of doors or in outhouses, yet I think I am far in advance up to the present for early birds. My first nest of three were hatched on March 21, and are doing well.

Up till to-day I have 24 young birds, including five Linnet and Canary Mules, from two cock Canaries and one Linnet; also I have three hens sitting, one mated with a Goldfinch. I would like to know how is this for a novice, but a lover of birds.

F. J. MILSOM.

Two Model Goldfinches.

SIR,—Being a regular and old reader of CAGE BIRDS I notice that a Mr. Hy. Wood has three young Canaries hatched in April in an outside aviary. I must congratulate him, as I consider he is very forward considering the weather we had this winter. I am not quite so fortunate as Mr. Wood, but I keep all my Canaries in outside aviaries, and up to the present I have three youngsters three weeks old, and 19 eggs.

This year I have some Canaries on the colony system and some paired off in separate cages, but all are outside with no artificial heat whatever. I have also two Goldfinches paired up to two hen Canaries. One hen had five eggs, but none proved fertile, so just before her time for sitting was up, and I had proved the eggs were not fertile, I put two Canary eggs under her from another hen, and they hatched all right, and Master Goldie and the hen Canary are bringing the two youngsters up, which are now three weeks old.

I have often heard that the Goldfinch will stick his beak into the eggs as soon as laid, but my two Goldfinches I keep with the Canaries all the time, and they have not offered to interfere with the eggs, and, as stated, one Goldie and his hen Canary are bringing up two young Canaries, and the other hen Canary has five eggs. They are last year's Goldfinches, and this is the first time of trying them.

I am also trying the Canary-Chaffinch, but up to the present I have had no luck. The Chaffinch laid two eggs, but they were laid from the perch and got broken on the bottom of cage. I have a cock Canary with a hen Chaffinch.

Should any brother fanciers care to look round my aviaries I shall be most pleased to show them round any evening or week-end.

H. KETTLE.

Daisy Cottage, Grosvenor Avenue,
Kidderminster.

Birds To and From Shows.

Secretaries of Societies Please Note

SIR,—I was most pleased on opening my "C.B." this week to find an invitation given by our Editor, for suggestions on the above subject. I have carefully read the letter of "E. E." in CAGE BIRDS of May 19, and I think his suggestions are all right if the railways, which are under Government control, would fall into line, but that is a course they are not expected to do at the present time with so much constant travelling of munitions, etc., for Government use.

I think the trouble could be easily overcome if exhibitors would enclose with their entry money the amount for the return journey. Show secretaries to have a separate book with all exhibitors' names and addresses in, with the amount sent for return carriage. In the event of the amount sent not meeting the bill, the balance could be taken from the prize money if any coming, and if no money coming a note to the exhibitor would bring the balance to the show sec., also if the amount sent for carriage exceeded the bill the balance to be returned to the exhibitor.

As it is becoming a common practice for birds to be taken from their cases during the journeys to and from shows I do not think it would be wise to put a postal order in the packing case for return carriage. It would be a further inducement for the packing cases to be tampered with, hence my reason for suggesting that the business be done between exhibitor and show sec.

As our show season is fast approaching, this is a matter which needs to be thoroughly dealt with, and a decision come to which will meet the approval of all. The final decision to be printed in the show rules of all shows held during the war.

D. MCFARLANE, Show Sec.

Barrow, C.B.A.

[Secretaries might bring the matter to the notice of their members at their next meeting and communicate the result to us.—Editor, CAGE BIRDS.]

Is Tredegar C.B.S. Dead?

Subscriptions Waiting to be Paid.

SIR,—I feel I cannot let pass such a reply as that given by the secretary in last week's CAGE BIRDS without enlightening those who may have read the correspondence. The Secretary announces me as a non-member, and says that I have not paid my subscription for 1916, and that if I send same he would have much pleasure in proposing me as a new member. Will the secretary please read rule 7?

Personally, I question whether any member has paid his subscription, though perhaps I may be told that the chairman, treasurer, and secretary have paid theirs. Little matters like this can easily be arranged. If he will notify me of a meeting at a proper place, not at any man's house, or where he works, my subscription will be paid.

At the annual meeting held March, 1916, (at which I was present) I was elected vice-chairman, a position I greatly appreciated, and not since then have I been notified of a meeting. The secretary says that June 2 was fixed for the next meeting, nearly twelve months ago. Is this how flourishing societies conduct their business? Then about the accounts; where, when, and by whom, were they audited? I do not want to air further grievances or even to individualise myself from the other members by trying to get "a move on," but I feel that we should have a real live society, try to regain our lost ground, and place ourselves once again amongst the leading societies of Wales.

G. O. THOMAS.

SIR,—We, the undersigned, being interested in the correspondence between the secretary and vice-chairman of Tredegar C.B.S., would like to know when the secretary intends calling another meeting in order that we may pay our subscriptions for 1916-17. Having now waited twelve months for such a notice. We should say Tredegar C.B.S. is very much dead.

Signed—

R. F. GRIFFITHS.
G. BENNETT.

How to Economise in Egg Food.

Two Days' Supply in One Making.

SIR,—Everyone now-a-days, bird lovers included, is, or should be, trying to economise. I am always on the look-out for anything new for the bird-room, and always trying to think out new ideas. This season my study turned to how to keep the egg food fresh longer than the time it is supposed to do.

It is the custom of many bird keepers to mix the egg food fresh every day, and some even go further and mix twice a-day. Well, this is all right, providing one has the time to spare, and, shall I say, the cash also in these times. Up to the present season I have always been able to mix egg food fresh every day, and also to give the birds fresh food three times a day—morning, noon and evening, but stress of work has entailed my doing what I thought at first was a doubtful proceeding. Here it is:

I mix my egg and biscuit at night and stand the vessel in a dish of cold water, about half-way up the pot containing the food. Then, first thing in the morning I give it to the birds in the glass egg pots. I make every day as much as the number of pairs I have up necessitates, and it is quite fresh at night But one must be careful to see that the egg pots are washed out each day, and no stale food left in the corners.

I found that the egg food thus placed in the water to cool it kept beautifully fresh for one day, so this tempted me to see if it would do so for a longer period, and I tried it. I changed the water in the pot and left it in for the second day, and found it also was real fresh.

If fanciers with only one or two pairs of Canaries up for breeding like to try this method I am sure they will find it a saving instead of having to make fresh each day. Of course in the very hottest weather it would not be advisable to give it to the birds without first assuring oneself of its purity, but kept in a moderately cool place it is safe for two days. I think this is a tip worth trying during these distressing times.

The Scarcity of Wild-bird Life.

Winter's Toll of Resident Softbills.

Sir,—Being a constant reader of your valuable paper, and very much interested in bird life generally, I would like to mention the scarcity of nests this year. I have on several occasions lately made some long country tours in search of birds' nests, my latest being to-day, May 20, which extended from 15 to 20 miles. Over the same route in other years I have found from 40 to 50 nests, but to-day I discovered only one nest, that being a Chaffinch's, with four eggs. I also found numerous birds dead, mostly Softbills, due, I suppose, to the very severe winter. Willow Wrens were very plentiful, and other birds I observed were the Blackcaps, Coots, Moorhens, Blue-Tits, Blackbirds, Thrushes, Greenfinches, Linnets, Wheatears, Curlews, Wild Ducks, Robins, Tree Pipits, Yellowhammers, Corn Buntings, Magpies, and a Cuckoo, which I approached to within twenty yards.

Thos. Taylerson.

On Making a Start.

Some Advice Explained by the Adviser.

Sir,—In reply to Mr. Hutton I may say that the question of honesty did not arise in my lecture, and it is difficult to understand Mr. Hutton's motive in reading that into it. Fanciers are as honest as any other body of people, no less and no more, their advertisements tell us so.

Mr. Hutton asks whether I have always backed my own intelligence. No; that is why I know the best advice to offer. A man who has made no mistakes and no success is not the best man to offer advice. I can rightly claim both, and I am satisfied that the advice I offered the City and Suburban members is sound and practicable. It is this. Make yourself conversant with the variety you propose to breed, and, having done so, back your own conclusions. Not, let me add, because others will put you on birds they want to part with, but rather because you are more familiar with your own particular needs.

I submit that it is a greater pleasure for a fancier to get a customer who says right away "I want that bird; what's the price?" pays, and goes, than it is to get one who spends a lot of time in trying to make up his mind, finally takes your advice, and then says he will pay next Sunday, and who if the bird does not score nap is likely to blame the seller. In fact, I am told this really happens.

Mr. Hutton says in conclusion "find an honest and reliable man." Why say "find" him? Why cast this reflection upon the fancy? Personally, I say if a fancier cannot trust himself to buy he should go to the nearest man who breeds his winners and he will be well treated. But my better advice, and it is given as the result of long years of experience, is to study the breed you intend going for, cultivate your intelligence, back up your judgment, rely upon nobody. Don't be spoon-fed. Be a man and feed yourself.

F. J. Martin.

The Value of "Spoon Feeding."

Sir,—With your kind permission I should like to repeat the words which, according to the report in Cage Birds, Mr. Martin used, when giving his lecture before the members of the City and Suburban A.C.B. These are as follows:—"We are sometimes told to place ourselves in the hands of a reliable breeder to secure success. Fanciers, it is a joke, and to many an expensive one." He then goes on to say: "Friends, trust no one, but trust to your own intelligence."

That, Sir, was what I termed miserable advice, and still do so. I gave in my letter a little and only a little of my experience, and how I was treated through trusting to a reliable breeder. More I could add, for I have found during my experience in the cage bird fancy that most of them are a decent, jolly lot of fellows. Mr. Martin says in his letter had I heard his lecture I probably should have agreed that the person whose success depends on the advice of others is spoon fed. I should like to say that had I been there I should most certainly have protested against the words he used, re the "joke" as he calls it. Respecting being spoon fed, I quite agree with him that one has to use his brains to be successful, when starting in the fancy, but it wants mixing up with some good, sound advice from other fanciers.

Speaking of spoon feeding, I really believe many would have been in the fancy to-day if they had stuck to the spoon feeding a bit longer, for no sooner did they commence in the hobby than they thought they could do without it, thought they could run before they could walk properly, left off spoon feeding, wouldn't be told, thought they knew all there was to know in the breeding of winners, trusted to their own big selves and their own intelligence, knew better, of course, than anyone else, got bird indigestion, and were soon out of the fancy.

How different the fancier who is willing to back up his own intelligence with the sound advice he can get from others! He plods on, and you soon see he is making progress as you notice his exhibits on the show bench, creeping up from the very highly commended cards to the red ticket. If we have to trust only to ourselves, and trust no one else, we certainly don't want anyone giving us lectures and advice.

A Lover of a Good Norwich.

The Yorkshire Union of C.B.S.

The Revised Standards—Ticked, Marked and Variegated Defined.

Sir,—At the Council meeting, May 19, under the presidency of Mr. H. J. Chittenden, the standards as revised by the sub-committee together with representatives from the Yorkshire Canary Club, National Green Marked Y.C.C., Cinnamon Marked Y.C.C., and the Open Norwich Plainhead Club, were considered, discussed, and afterwards approved as follows:—

CLASSIFICATION:—

1.—Clear.
2.—Ticked.
3.—Marked.
  (a) Evenly-marked.
  (b) Unevenly-marked.
4.—Variegated.
  (a) Lightly variegated.
  (b) Heavily variegated.
5.—Green—Self or Foul.
6.—Cinnamon—Self or Foul.

The presence of dark feather on the thigh, or natural discoloration of the beak, legs, or feet, or any mark which is not discernible as the bird stands in its natural position in the show cage shall be entirely ignored throughout the whole classification.

TICKED.—A ticked bird shall have one mark only, unbroken by any intervening light feather, on any part of the body (thighs, legs, feet, and beak excluded).

The Standards for Marked Birds shall be regulated by what are termed technical marks, that is, marks on (touching) eyes, flights (primary or/and secondary) and sides of tail. Each eye-mark and each tail-mark must be distinctly separated from its corresponding mark by a portion of light feather, otherwise they will not be recognised as technical marks.

EVENLY-MARKED.—An evenly-marked bird shall have:—

(a) Two technical marks, (both eyes, or flights of both wings, or both sides of tail; or,
(b) Four technical marks (both eyes, and flights of both wings, or, both eyes and both sides of tail, or, flights of both wings and both sides of tail); or,
(c) All six technical marks.

UNEVENLY-MARKED. — An unevenly marked bird shall have three or five technical marks only.

VARIEGATED classes shall consist of any other variegation not already provided.

(a) Lightly Variegated, more light than dark.

(b) Heavily Variegated more dark than light.

In the Green and Cinnamon classification the definition of the respective clubs has been adopted.

S. Midgley, Hon. Sec.

Egg-binding and Sweating Hens.

How to Prevent Either Trouble.

Sir,—I have been very interested in the articles recently published in Cage Birds on the various troubles we have to combat in the bird room, and I thought I would like to give my opinions, and my method of preventing two of the troubles often met with, egg binding and sweating hens. Before we start to prevent or cure any trouble that may arise we must have a little knowledge as to its cause. I should like it to be understood that I do not wish to pose as an expert on the subject under discussion, but having had upwards of 20 years in the bird fancy I claim to know a little.

Take egg binding first, as it is a very tedious ordeal when a hen is egg bound and on the verge of collapse for a novice that is not used to handling such delicate creatures. In my opinion egg binding is caused by the egg passage being too dry, not having sufficient moisture or oiliness to allow the egg to pass freely, and the result is that when the hen comes to lay the thick part of the egg becomes so dry in passing through the ovary that she is unable to part with it.

I always give my hens cod-liver oil in their egg food when feeding them up for breeding, allowing a few drops for each hen, and I have never been troubled with an egg bound hen since I tried this, which is a good many years now. I also give them a little niga seed twice a week before they lay, but I rely on the cod-liver oil.

In the case of sweating hens, the majority of people, I believe, put it down to nervousness. I believe that the sweating hen and the bad feeding hen are not so common as many fanciers think. I have hens in my room at present which if they are off the nest when the young are a week or under a week old, and anyone enters the birdroom will fly straight on to the nest and bang themselves down on the young as if they were going to squash them. If anyone goes near the cage they will open their mouths as if to bite anything that went near. Now, I call that nervousness, yet they are the best of mothers.

The cause of the sweating hen and the bad-feeding hen, in my opinion, is that when the young are newly hatched they partake of too much rich egg food to satisfy the need of the youngsters, and the result is that their stomachs get upset. Therefore they sit on the nest in an out-of-sorts manner and neglect their young, and finally the young die and the hen is branded as a bad feeder or a sweating hen.

The best remedy I have found is to give all hens, for one day, when the young are three days old as much Epsom salts in their drinking water as will lie on the end of a teaspoon handle. I have found that doing this clears the stomach and keeps the hen in good health and able to do her duty.

It is a bad mother that will pine her children, and it is a bad Canary that will not feed her young if she is kept in good health. My advice to all beginners is try to keep your birds in good health by proper feeding and cleanliness, and disturb them as little as possible when they are breeding; then you will not have many wasters. Wishing Cage Birds the success it so well deserves.

J. Pearson.

In-Breeding.

Mr. House Replies to Mr. Johnson.

Sir,—I am not wishful to indulge in personalities. Mr. Johnson made several distinctly offensive allusions to myself in his lecture, so that if there has been any attacking of personality it has been done by him. To ask for a man's credentials is not to attack his personality, nor to impugn his honesty. Mr. Johnson has posed as an authority on this great subject, and as a reader of Cage Birds I am entitled to ask for his credentials. He admits he has none. That being so, why has he wasted so much paper and ink over a matter of which he admits he has no practical knowledge?

Mr. Johnson mentions a few matters which call for answer from me. As to convincing your readers as to the pedigree of the birds named by Mr. Johnson, I am not in possession of any facts relating to those birds, and, as I make it a practice never to enter into controversy without being certain of my facts, I can say nothing about these particular birds. They may be in-bred, or they may not. I have never asserted that winners are not bred from direct out-crosses. Many have been. A writer in a contemporary, dealing with this subject quite recently, said: "I am not going to deny that winners have not been bred from first-class unrelated specimens, because I know they have, but where one has been bred by such methods thousands have been bred by in-breeding." No one who is honest would dispute this statement.

What Mr. Johnson has to say about my position in life has nothing to do with in-breeding. Even had I kept mice and rats, and the hedgehogs which he mentions, I should only have increased my knowledge of natural history. These attempts at being funny are, I suppose, the red herrings of which Mr. Johnson speaks.

Mr. Johnson mentions Mr. Cook and Mr. Dykes. Mr. Cook, I am sure, would be the last man to tell the readers of Cage Birds that he has no related birds in his room, and that all his winners are unrelated. As to Mr. Dykes, that gentleman is more of an exhibitor than a breeder; if he cannot win with what he breeds at home he will, if he can, get it elsewhere. Apart from this he is open at any time to buy not one good bird, but a dozen, or a score if Mr. Johnson, or anyone else, can find them for him. This does not prove that in-breeding is either bad or good. The questions asked by Mr. Johnson are not unanswerable. These winners which he mentions are but as a drop in a bucket. "One Swallow does not make a summer. Neither do half-a-dozen winners bred by haphazard methods upset the practical utility of in-breeding.

I know nothing about Mr. Cocker's system of breeding, but I know that both Mr. W. H. Smith, whom Mr. Johnson mentioned in his lecture, and his son, Mr. J. Smith, are both confirmed believers in in-breeding, and have practised it consistently for many years.

As to a certain gentleman buying a hen from the West of England, that incident proves the value of in-breeding, because that hen was bought from a stud in which in-breeding has been followed for more than twenty years, and the breeder of that hen has publicly stated on more than one occasion that his successes (which are many) have been due to following advice which I gave to the Plymouth fanciers in a lecture delivered many years ago.

What Mr. Johnson states about longevity is as absurd and ridiculous as it is untrue.

Mr. Johnson quotes from my book on Norwich Canaries, but his quotations will not convince the thinking fanciers. In writing a book one has to speak generally. Not so when one's opinion is asked as to an individual pair of birds. One leaves the general for the particular in such a case, and advises on the knowledge that is available.

Norwich Canaries seemed to be uppermost in Mr. Johnson's lecture, therefore I will give the names of a few breeders of Norwich who have produced not one, or two, but many winning Norwich, and who are still with us, and of us, to-day.

First shall be the breeder of the hen mentioned. Mr. W. Spillman, of Plymouth, and that other great Western breeder, Mr. W. Collings. Mr. C. E. Silk, of Emsworth, who, like myself, has knowledge of the breeding of cats, rabbits, and poultry as well as Norwich Canaries, and has won much with each. He is one mentioned by Mr. Johnson, and he, I know, believes in keeping his own stud together, and not breeding in a haphazard, happy-go-lucky manner. Others are Messrs. Scothern and Bishop (Nottingham), W. Bowyer (Leek), Tickell (Bodmin), Payne (Gloucester), King (Cheltenham), Russell, Eckersley (Birmingham), Fox (Long Eaton), Sherman (Hayle), Vardy (Hucknall), Gardner, Heath, Hodder, Ramsden, Morris (London), Greeves (Wrentham), Mackley, Laccohee, Winter, Sadd, Revell (Norwich), Simpson (Ipswich), Willings, Taylor (Prescot).

None of these men believes in the chance methods which Mr. Johnson advocates, even though he poses as a believer in in-breeding. Mr. Wallace aptly exposes the vulnerability of Mr. Johnson's position in this respect, also the fact that his arguments are neither logical nor practical.

I asked for Mr. Johnson's credentials because I was ignorant of their existence. He admits he has no credentials as a breeder of winners. This being so, the fact that he has shown a few winners does not make him the authority he would have the Fancy believe him to be. However, we now know the truth about Mr. Johnson from himself—"I have no credentials."

C. A. House.

Well Begun is Half Done.

Sir,—May I correct a slight mis-statement in Mr. Johnson's letter? I am the person who travelled north, south, east, and west to buy the best I could find, but I did not buy the hen Mr. Johnson refers to. True, I did offer £8 for her, but her owner would not sell her, although he has since exchanged her for a well-known buff cock.

Now, I told Mr. Johnson this in a private letter many months ago, and I cannot quite understand why he says I bought her unless it is to clinch an argument against inbreeding. I am still of my old opinion, and I am putting it into practice this year; but as I am somewhat impatient, and naturally require some stock to start with, I tried to get the best I could induce breeders of note to part with. I may say I have four of the best strains in the country in my stud, and I am keeping them all separate. Next season I shall begin to cross in the progeny, and in about three years' time I shall be able to give the results. May I conclude by saying that I visited some of the men whose names have been mentioned by Mr. Johnson, and I never yet found one who disagreed with judicious inbreeding or one who failed to practise it if he had a definite object in view?

J. W. Gordon-Stewart.

'CAGE BIRD HYBRIDS'

THE STANDARD WORK ON THE SUBJECT.

By Chas. Houlton. Price 7s. 6d. net.

"CAGE BIRDS," 154, FLEET ST., LONDON, E.C.

CORRESPONDENCE.

(Continued from page 285.)

A Believer in Pedigree.

SIR,—I am now in my fifth year of line breeding with Norwich, and I have great hopes of producing a star. Could Mr. Johnson please verify that in every case mentioned by him the birds were not in the least related; just a little spot of related blood running in their veins, I mean?

Last year a gentleman called on me; he was in search of a good yellow hen, and he had called on many of the champion fanciers from North to South and had purchased from some of those named by Mr. Johnson.

He was fitting up a stud of Norwich, and Lands End to John-O'-Groats is not a great distance after all.

Surely Mr. S. Cook did not introduce an outcross unless it possessed certain essentials of a modern Norwich. Neither did Mr. Houghten purchase Mr. Spillman's hen without a good reason. She was a winner, one of the best.

"Pedigree will tell," Great breeders buy from great breeders. As to inbreeding being weakening, I would ask Mr. Johnson if he can explain why a stack of corn should be made in August and in less than twelve months become infested with hundreds of rats and mice. A male and female first enter this stack and after a time generation after generation, down to twenty-four hours of age, can be traced, all of which are inbred and are plump and healthy. J. LOCKE.

My Other Critics.

SIR,—At the outset, I may as well confess that I have less credentials to write about the Border than the Norwich, so a brief statement will have to suffice for the courteous criticism of Mr. Wallace. I have seven pairs of Borders breeding, but as they are kept primarily as feeders for Norwich, any good ones bred will be more by accident than design. So you see Mr. Wallace has me guessing the first time.

But about those two young Border cocks bred from father and daughter. Where were they exhibited? How is it one only got second in its class? Was the one that beat it bred by inbreeding? Why, if they were such champions, weren't they given a chance to make Mr. Wallace's name a Paterson, or a Wilson, or a Bennett? It is a pity Mr. W. is not a keen exhibitor; he might have done a great service to the cause of the inbreeders.

I see the "genial Sam" has not replied to Mr. Wallace's query about the old Buff and his son, which is just as I expected. Sam is just as well known for his silence as for his geniality, which may sound paradoxical, but his friends know what I mean. However, Mr. W. ought to have known that an unflighted Norwich cock is not shown against old birds; and the son is now in his second breeding season, and has had two exhibition seasons. He is a beautiful Norwich, but about as comparable with his father as an English Bullie with a Siberian. Mr. House placed them respectively 1st and 4th at Ardwick.

Of course Mr. House is wrong when he says I was pulling the fancy's leg. I am very serious minded by temperament, especially in a set-to with Mr. House. One has to be.

With reference to Robins migrating, I am afraid that my observations fall foul of Mr. Scott's. I do not believe in the theory that the Robins are replaced by some from another district. If the terrain is capable of providing food for the stranger, it will provide food for the original. Besides, one gets to know certain peculiarities of certain Robins, and it is impossible to mistake them. It has to be understood that I am not trying to disprove his statement about those Robins which were fed on board ship. I wasn't there—worse luck—but if I were a Robin and wanted to travel to the Mediterranean for my health, I should prefer to travel by boat rather than fly. I always thought that Robins were amongst the most intelligent of our British birds. That story of Mr. Scott's confirms it.

T. JOHNSON.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

KIPPAX.

Kippax Linnet Club members' sing, May 19; 44 birds entered; 1, Cooper, 2, Collinson; 3, Plows; timekeepers, O. Potter, J. Wallis; tappers, A. Cooper, H. Collinson.—R. Plows, sec.

PONTEFRACT.

Woodman Inn, May 19th; Linnet contest, 48 birds sang for four prizes: 1, W. Nelson; 2, 3, 4, Skidmore. May 20, 48 birds sang for four prizes: 1, Jones; 2, 3, shared Wingham and Watson; 4, Skidmore.—A. Wingham, sec.

SHEFFIELD.

Linnet contest, Sportsman Hotel, Paternoster Row, May 20; 22 birds sang: 1st, Jackson; 2, 3, Parlett and Bayston tied.—E. Phillipson, sec.

ATHERTON.

Royal Oak Linnet Club, Bolton New Road. Open contest, May 19, for time singing; 37 birds entered: 1, Donnelly, 170; 2, Murphy, 121; 3, Peat, 90; 4, Bates, 72; timers, H. Holt, R. Statham; minutes, J. Whittle; tappers, P. Murphy, T. Knowles.—J. Smith, sec.

WEST HARTLEPOOL.

Linnet singing contest, Blacksmith Arms, May 5, 15 birds sang: 1, Waxy; 2, 3, Meadley; also May 12: 1, 2, Waxy; 3, J. Harrison; also May 19, 17 birds sang, and some good singing was done: 1, 2, 3, Meadley; judge, W. Randall; timekeeper, G. Elliot.—G. Elliot, sec.

BARNSLEY.

Dove Inn Lark and Linnet Club Linnet sing, May 20; 16 birds sang: 1, Dickinson, 3.38; 2, Wadsworth, 3.20; 3, Jones, 3.19; Hardman, 3.11. Lark sing, same date, 9 birds entered for 7 min. sing: 1, Hardman, 4 min. 44 sec.; 2, Coles, 2.25; D. Fish, 1.59; big sing, Whit Monday, for Larks only; 10 min. hang; members please note, 1s. entrance.—J. Hardman, sec.

CASTLEFORD.

Linnet singing contest, George and Dragon, Bridge Street, May 20; 36 birds entered: 1, 3, shared, Wainwright and B. Nelson; 2, Williams.—A. Watkiss, sec.

Castleford Potteries, Grey Horse Inn, Linnet singing, April 19: 1, 2, Wainwright, 2 min. 4 sec., 1.44; 3, Oliver, 1.39; Wainwright also wins pool.—J. H. Nicholls, sec.

LEEDS.

Open Linnet contest, Clarence Hotel, Skinner Lane, May 20; 33 birds faced the judges: 1, 2, shared Bamfield and Hodgson; 3, Kilbride; 4, Wigfield; judges, S. Butterfield, F. Wells and C. Ward.—S. C. Summers, hon. sec.

Open contest, Glassmakers' Arms, Greyhound Place, York Road, May 20; Linnet sing, 40 birds: 1, Marshall; 2, Shaw; 3, Buckley; 4, Hurst; 5, Smith. Judges, Messrs. Dearlove, Biss, Bomfield.—G. Marshall, hon. sec.

Open contest for Linnets, Old Bird House, Albion Hotel, Saville Green, Leeds, May 20; 46 birds sang for 5 prizes: 1, Chippendale; 2, Clegg; 3, Hardcastle; 4, Hineson; 5, Appleyard. Judges, Crane and Grant. Also contest, same evening, 24 birds: 1, Chippendale; 2, Hardcastle; 3, Thompson; 4, Towers. Judges, Jennings, Grant, and Crane.—T. Crane.

(Please see note as to advertisements of future contests.—Editor.)

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Aberdeen Amalgamated C.B.S.—May 25, Trades Hall, 8. Question night.—R. J. Robertson.

Aber Bargoed F. and F.S.—June 2, Quarry Arms, Aber Bargoed, 7. Contributions; election of delegate to South Wales and Monmouthshire F. and F.S.; and other important business.—J. T. Hohley.

Blaydon-on-Tyne C.B.S.—June 2, Smoke Room, Wesleyan Chapel, 7.30. Classes for N.F. show, and change of date for same.—J. J. Walker.

Burnley O.S.—May 29, 75, Lindsay Street, 7.30. Young show, and general business.—J. Moorhouse.

Cheppington (Scotland Gate).— May 26, Social Club, 7. Last meeting to enrol new members.—H. Seely.

Darlington C.B.S.—May 30, George Hotel, 7.30. Report on Federation meeting.—R. W. Gray.

Derby C.B.S.—May 26, Normanton Hotel, 7.45. Nomination of birds for annual show.—F. W. Jordan.

East Ardsley.—May 26, Black Swan, 7.30. Syllabus ready, and important show business.—A. Walton.

East Ham F.S.—May 30, Liberal Club, High St. General meeting (time not stated.—Ed.).—E. Winser.

Glasgow, W. Counties.—June 2, Good Templars' Halls, 122, Ingram St., 7. Election of judges for annual show, last monthly show of season, 8 classes, and other important business.—J. H. Adam.

Guisboro' "Priory" C.B.S.—April 26, Wear's Rooms, 7.. Report of Federation meeting, and important business.—J. S. Campbell.

Hebden Bridge C.B.F.A.—May 29, Brig Cafe, 8. Arrangements for Young Bird show, and other business.—A. E. Ismay.

Hetton-le-Hole C.B.S.—May 26, Colliery Hotel, 6.30. Important business; last meeting for new members. —G. Vipond.

Midland Roller C.C.—Monthly meeting postponed till a week later, owing to date falling on Whit Monday.—J. W. Thompson.

Nantymoel, Ogmore Vale C.B.S.—May 30, Nantymoel Lesser Hall, 6.p.m. Drawing up business for F.F. show.—T. Davies.

Penygraig C.B.S.—June 2, Butchers' Arms, 6. Important business; numerous specials for coming shows.—W. Hollinshead.

Porth and Rhondda Valleys C.B.S.—May 31, Llwyncelyn Hotel, Porth, 7. Very important business.—A. H. C. Legg.

Provincial Roller C.C.—May 26, Old Boar's Head, Manchester, 6.30. General business.—E. Hibbert.

Queen's Park (Glasgow) C.B.S.—May 30, Y.M.C.A. Rooms, 8. Classification, judges, etc., for F.F. show; "Hat Night."—A. Foreman.

Rotherham C.B.S.—May 26, Mail Coach Inn, 7.30. Important business.—G. Allott.

Sheffield C.B.S.—June 7, Wentworth Cafe, 8. Table show.—A. Hobson.

Southern Roller C.C.—May 29, Imperial Restaurant, 57, Old Bailey, E.C., 7.30. Business and Lecture by Mr. Fisher, "Some Training Reminiscences and the great Glucke Tour"; birds present.—J. Aspinall.

Stockport and Hazel Grove B.F.A.—May 29, Trinity House, Shaw Heath, 8. Schedule and Final Arrangement for N.F. Show.—W. Stafford

Swinton and Pendlebury Roller C.C.—May 30, Bridgewater Arms, Pendlebury, 7.30. General business.—E. Hibbert.

Warrington C.B.S.—May 31, Blue Bell Safe Rooms, 8. Arrangements for Nest Feather show.—H. Warburton.

Wombwell B.F.A.—June 2, Ship Inn, 7. Arrange classes for N.F. show.—F. Moore.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*

(3)—*Queries intended for different specialists must be written on separate sheets of paper.*

(4)—*Queries must not include or be included in orders for books, instructions to advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*

(6)—*Queries received during any week, up to the first post on Saturday morning, will be answered in the issue bearing date of Saturday in the following week.*

(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*

(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*

(9)—*All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

FRUITLESS EFFORTS.

E. B., Walt.—There is no material difference in the trouble with all the hens, so all may be dealt with as one. It is quite evident that they are not in proper breeding condition, but as you give no details at all about your management, nor the probable age of the hens, I cannot say just where the cause lies. If they are now past the first vigour of youth, however, I doubt if they will be of any further use at all for breeding. Anyway, you may try what the following treatment will do for them in the course of two or three weeks. See that the birds are kept in a bright and healthy place, but free from direct cold draughts, and if the hens are each still sitting on one or two eggs, which are fertile, give them all to the hen that is the most reliable feeder. Then take the nests away from the others for a week. If the eggs are now seen to be all unfertile, then treat all the hens alike. Every second day, in addition to the staple seed diet, give to each pair a small teaspoonful of egg food with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a sprinkling of yellow mustard and linseed in the bulk. Give a fairly liberal supply of green food daily, but avoid giving dandelion. In the drinking water, for three consecutive days and every second day for the remainder of the first week, add six drops of syrup of rhubarb, and as much Epsom salts as will cover a sixpence, and after this give four drops each of dilute sulphuric acid and tincture of gentian, and two of tincture of steel every second day for another week. Then, if the birds appear in good condition and desirous to nest, you may give them another trial.

WORTH THE TRIAL

W. F. B.—(1) You do not say whether you mated the birds as soon as you had purchased the cock or not, but if you did so, or within a day or two after, say, any time not later than the Thursday of the same week, and the hen was in good condition, there is every possible reason to expect that the eggs will be fertile, and you should certainly allow them to be sat out their full time. (2) When both birds are in good breeding condition and full of vigour, the eggs may be expected to possess full normal fertility after a lapse of thirty hours from the time of putting the birds together. A rather shorter time may suffice in some cases, but I have no record of the shortest time possible to ensure fertility after the birds are mated, and doubt if such a condition exists which is applicable to all cases. Thirty hours is a fairly safe time limit to allow before expecting the eggs to be fertilised.

PAIRED OR MATCHED?

Greenhorn.—It is difficult to say with any degree of certainty whether the buff green cock and the yellow cinnamon hen are a suitably matched pair or not. To do so, one would need to have some definite information as to how these birds were bred themselves, and also what particular type of markings or colour you are aiming after in the progeny, and you say nothing at all on these points. As you bought the birds ready paired, together with a clutch of their eggs, rather an unusual method, I should say, you may not know the pedigree of the parents, but if the vendor was an experienced fancier and sold the birds as a matched pair, they may turn out all right, especially if he also knew your aim regarding the young. In such a case it is quite possible that the buff green cock is bred from a cinnamon strain and will blend successfully with the cinnamon hen. I think your best plan will be to wait until the young from the clutch of eggs now sitting are sufficiently feathered for you to see their colours and markings, also note whether they are dark or pink eyed, then write again repeating your query, giving these particulars about the young, and also say what is the colour and parentage of the other birds you have in view as mates, to vary this pairing. Then I shall be in a better position to help you in the matter.

VARIED.

W. F. M.—(1) It is certainly just a little exceptional for a brood of young to be on the perches and so vigorous as you describe at eighteen days old. The fact that there are only three in the brood would help to bring about this early development, but they also doubtless had a real good feeder. Each youngster being a distinct colour is in no way exceptional; even larger broods often vary in this manner. (2) Yes, the youngsters will probably be well able to be transferred into a flight cage in another ten days or so, but do not take this step until they can feed themselves nicely on the soft food and are beginning to crack canary seed easily. Also do not hurry too much about getting them on to hard seed at this tender age; keep on a little soft food daily for at least another three or four weeks. (3) The advantage of putting on rings is to ensure the correct identity of the individuals for keeping a record of their pedigree and as a guide for future matings on these lines. Each ring bears a distinctive number, and the year of birth, and these particulars are meant to be transferred to a stud register, or book, and against each is placed a full record of the bird and its parentage. If closed rings are used they are also a guarantee of the age of the bird as these can only be put on in the nest, before the birds are fully developed, and can never be removed without detection or serious injury to the bird. Open rings can be put on or removed at any time with perfect ease and without the slightest injury to the bird. (4) The food you name has been used by many as a substitute for egg food with success, so there can be no reason why you should fail with it. Still, as you appear to have done so well so far, you might do well to remember the adage leave well alone. (5) Yes, if of sufficient size to accommodate them, you may place successive broods of young in the same flight cage. But with each fresh brood you should allow them to fly in a fair sized cage, say, not less than a single breeder, for a week, to feel their wings and get accustomed to the larger space before placing them in the flight among the more seasoned inmates. Also keep a watch on them for a day or two after to see if there are spiteful specimens inclined to be quarrelsome. (6) For a permanency, two, or at most three, birds are sufficient to keep in a cage 2ft. by 15ins. and 2ft. high. The height is of very little moment in such cages as these. With strict attention to cleanliness you might keep from four to six temporarily, but there must be a certain risk in this overcrowding when the weather gets warm and sultry. (7) The rolled up appearance you describe is symptomatic of other things besides a chill. But still, you cannot go far wrong by putting the bird so affected on a diet of bread and milk for a time, especially if you combine it with keeping the bird in a warm place, adding an aperient to the water for one day, and then a stimulant, say, 20 drops of brandy, to the water daily for a week or so.

WHAT IS WRONG?

Scotty.—The moult which you say started in Feb. or March would be the cause of the bird ceasing to sing, and you should not have mated the bird until it had quite recovered from moulting and had resumed song. Instead of this you seem to have mated him whilst still moulting, which may account for him not resuming song when the moulting was stopped. In this case the eggs which are now being incubated will be practically certain to be unfertile. Still, you may allow the hen to sit out her full time, but it will be as well to commence to treat the birds as follows at once, so that they may possibly get to work again very soon after the period of incubation has expired. No harm is likely to accrue from treating both birds alike and leaving them together meanwhile, even whilst the hen finishes sitting. Give a mixture of three parts canary seed to one part summer rape as staple seed diet, and in addition to this give every second day a small teaspoonful of egg-food, with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it each time. On the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, with just a sprinkling of yellow mustard and linseed in the bulk. Give a young stool of dandelion, gathered fresh, daily, for green food. In the drinking water add four drops each of tincture of gentian and dilute sulphuric acid, and two of tincture of steel, two days in every three for a week. Then, by the time the hen has finished sitting the cock should be in a much more likely condition for breeding, and you may allow them to try again in the ordinary course.

DANDELION, ETC.

E. T.—(1) There is certainly the possibility that giving an unlimited supply of dandelion to stand in water in the cages may be accountable for some, if not all, of the trouble which is causing the birds to appear mopy and ill. Unless the water were changed and the vessels cleaned daily, this alone would be apt to set up unhealthy and insanitary conditions in the cages, which might very easily affect the birds. It would be a much better plan to give a supply of the weed freshly gathered, if possible, each day, without putting it in the water at all, and give only such a quantity as the birds will manage to nearly or quite clear up before roost time. That will be sufficiently unlimited for any purpose. To help the birds to pick up, give a morsel of bread and milk sprinkled with maw seed every second day for a week, and on the alternate days add to the drinking water ten drops of lemon juice and as much Epsom salts as will cover a sixpence on the first two days, and after this give instead four drops each of tincture of gentian, dilute sulphuric acid and two of tincture of steel on each alternate day for the rest of the week. (2) It is quite possible, but not very probable, for the eggs now laid by the hen which has been away from her mate for fourteen days to be fertile. To save wasting time with her, if you have other hens beginning to sit, it would be best to distribute these eggs amongst them, after placing on them a slight distinguishing mark, for them to be incubated, and thus given the benefit of any doubt. (3) This hen, supposing she has not already laid, and is still sitting on the nest, might have been utilised most conveniently to incubate the clutch of eggs concerned in the second query. It is quite possible that she might have laid her clutch by the time this reply appears, and in that case you need only let matters go on and take their own course. But if she has not, then the most likely thing to bring her back to a normal condition would be to give her a clutch of fertile eggs, quite common ones would do, or you might risk trying her with a clutch of better class eggs which the parents have deserted, or which are deprived of incubation from any other cause, which she might hatch out and rear the young quite well, and then go to nest on her own account in a normal manner.

A HELPING HAND.

H. H.—Let me advise you in a friendly spirit to read, and inwardly digest, the pages of "Canary Breeding for Beginners," which you say you possess, because I feel confident that if you do so you will be well able to combat any of the little troubles in the hobby which you are now concerned about, and you might very probably have saved the first brood. What you should have done when you noticed the cock beginning to ill-treat the chicks, seeing they were of an age when they could do without constant brooding, was to have put them in a nursery cage and hung it on the front of the breeder in such a position that the parents could reach them conveniently to feed them through the wires, which they would doubtless have done, and completed the rearing in this manner. With the next brood you should make sure of preventing this trouble by removing the cock when the hen begins to sit, leaving her to hatch out and rear the young by herself. If you have not done this, and the hen is now settled down to sitting, you should remove him at once, taking him out as quietly as you can so as not to disturb the hen after he has gone to roost in the evening, and if you can conveniently take him right out of earshot of the hen it would

(Continued on next page.)

QUERIES ANSWERED.
(Continued from previous page.)

be best to do so. I am inclined to think the cock is also the culprit in the matter of eating the eggs, but a little careful observation should definitely settle the point. To remedy this you might leave a china pot egg or two about the cage for him to practise on, but to save the next clutch with tolerable certitude you should, when the hen has built her nest, remove him each night to a cage by himself and keep him apart until you have secured the egg next morning. Then return him for the remainder of the day, and continue thus until the evening of the day the third egg is laid, when you may remove him and take him away permanently for the hen to go on sitting without his presence. It is not advisable to give egg food twice a day before and during the period of incubation. If the birds are backward in condition, which they should not be at this time, a teaspoonful between a pair every second day, with a similar quantity of mixed seed on the alternate days, is quite sufficient until the hen has laid her clutch of eggs, and then it should be stopped and a little given only two or three times during the time the hen is sitting. When the young are hatched a small teaspoonful for a brood of four twice a day is quite sufficient for the first two or three days, after which the allowance may be slightly increased as the demands of the young grow bigger, but always aiming at giving just such a quantity as the birds clear up just before the next supply is due. It is neither necessary nor advisable to withhold the bath after the young are hatched, especially if the weather is warm and sultry. Offer it for a half-hour each morning in the usual way, and if she wishes to avail herself of its use by all means allow her to do so.

THE NUT-BROWN CHICK.

Anxious.—The youngster you describe as a nut-brown bird is undoubtedly a cinnamon coloured one, and in that case you will find that it has pink eyes. In this sense it is not at all a rarity nor of any special value on account of its colour, though if it is properly extracted from the pure Cinnamon it may make a very useful stock bird for improving colour and quality of plumage where this is a necessary feature in one's stock. The green variegated cock from which the youngster was bred was, in all probability, a direct cross from the Cinnamon. You do not mention the breed of the birds, but if they are either Yorkshires or Border Fancy, both of which are stooped, so to speak, in cinnamon blood, such a sport is not at all uncommon, but in any other breed where the cinnamon blood has not been so freely infused, it is extremely doubtful if the bird is, as you suppose, a cock. For this to occur there would need to be at least some trace of cinnamon blood in the hen as well as the cock.

TROUBLE WITH FEET.

D. C.—(1) Try the following treatment for relaxed toes: If the claws are overgrown also, trim them back to a proper length during the process. Get two saucers side by side, fill one with tolerably hot water, but be careful to see that it is well below any risk of scalding, and fill the other with cold water in which dissolve a small teaspoonful of common salt. Catch the bird and immerse the feet in the cold water for a minute or so, then transfer them at once to the hot water for a minute or two, and whilst soaking here, gently remove any dirt and cleanse them, cutting back the claws, if necessary, to a correct length with a sharp pair of nail or embroidery scissors. After a minute or two in the hot water, again transfer them to the cold for a similar length of time, and repeat the process until they have been in both waters about half-a-dozen times, but be careful to finish up in the cold water. Then dry the feet, and gently massage on them a morsel of Lanocyllin or Jeyes' veterinary ointment. Repeat this treatment every second day for a week. To strengthen the system give, every second day for a fortnight, a morsel of bread and milk with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, and on the alternate days add to the drinking water four drops each of dilute sulphuric acid, tincture of gentian, and two of tincture of steel. The sample of seed enclosed contains far too much millet and too little canary for a staple diet, but as a mixture for occasional use it is not bad. The seed in the separate packet is white sesame, useful in some seed mixtures, but not generally much used as food for Canaries.

BEST COLOUR FOOD.

J. L.—The substance usually termed tasteless pepper, or sweet tasteless pepper, which you will see frequently advertised in our prepaid columns during the season from the end of June to about September, is quite the best thing for colour feeding Canaries. It would occupy too much space to go into all the details here, especially as the season is yet rather far away, so I cannot advise you better than to get our Manager to send you a copy of the handbook on Colour Feeding, 3½d. post free, which gives you the fullest possible details all through. You will doubtless see some informing articles in our columns when the proper season approaches. Of course you know that it is no use attempting colour feeding except when the birds are moulting, as it is only at this time that the new plumage can be affected by judicious feeding.

HEADS HANGING DOWN.

Heads Down.—As the birds seem all right in other respects, I see no need to worry about them "nodding" with their heads in front of them instead of over the wing. Continue giving them a morsel of egg food daily for another two or three weeks, and you will probably find they will be all right. It is certainly not a usual practice for young birds to sleep in this way, but occasionally one finds specimens here and there that do so, and they are none the worse for it.

YOUNG THROWN OUT.

W. B.—(1) I'm afraid I cannot give you much advice about the hen which refuses to feed the young, and throws them out of the nest at a week old without some more definite particulars to found an opinion upon. Does the hen appear to want to go to nest again? Is the throwing out deliberate and intentional, or are they merely dragged out accidentally in the claws of the hen? Before she nests again it would be advisable to examine the claws, and if they are overgrown, trim them back to a proper length. Again, did you leave the cock with the hen, or remove him when she began to sit? In any case try what the following method will do for the next brood. If you have been leaving the cock in with the hen, remove him next time when she begins to sit, and leave her to hatch out and rear the young by herself, or vice versa, if he has been removed previously. Then, as a beginning, add at once to the drinking water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea every second day for a week. Feed the same as advised to "Scotty" in this issue, until the hen has gone to nest again, except that, instead of giving dandelion, which avoid, give chickweed, flowering tips of tender young groundsel, lettuce, or watercress, as green food. When young are hatched, give egg food in moderate quantities fresh at least twice, and preferably three times, daily, and begin on the third day to give a morsel of green food, as mentioned above, and then go on giving a little each morning and afternoon and gather it fresh, as required, if possible. Keep an eye on the hen from the fourth day onwards for a few days, and if you see she gets slack in feeding, at once add a crystal of sulphate of soda the size of a small pea to the water for the greater part of two consecutive days, and offer a bath in which you have dissolved sufficient common salt to give the water a slightly saline taste. If she still persists in her unnatural habit after this treatment, I am afraid your only chance of saving the young will be to transfer them to a more natural parent, or, perhaps, you might try your hand at hand-feeding and rear them in that way if you have plenty of time. (2) The sample of canary seed sent is a nice size, clean and bright, and of good all-round quality. The rape is a very good quality of summer rape. The hemp is stale and rancid and totally unfit for use as a food for Canaries. If you have been giving this hemp at all freely to your birds it is quite possible that it may be at the root of the trouble with the hen, in which case the trouble may automatically disappear when you have discarded this hemp, which you should do at once.

YOUNG APPEAR WET.

W. S. T.—Yes, the trouble you describe is what is usually termed "sweating." In your case it is in all probability due to diarrhœa in the young, with watery evacuations. See that your hemp, if you use any, is sound and sweet in the kernel, and then I think the following treatment will enable you to get over the difficulty in the next broods. For the first few days after hatching use only the yolk of the egg, no white, and add to it an equal bulk of either bread crumb or biscuit. Make a saucerful of crumbs from stale bread and slowly bake them in the oven, stirring them now and again with a prong, until they are dried crisp and of a light golden-brown all through. Then from the second or third day onwards for a week or so make your egg-food with equal parts eggs, crushed biscuit, and these baked crumbs. Keep an eye on the condition of the young, and if you notice them getting loose or damp in appearance at once slightly dust the egg food each time with carbonate of bismuth, and add to the water six drops of dilute sulphuric acid and four of tincture of opium for two successive days. Begin to give a small spray of green food on the fourth day as usual, but be careful to see that you do not give any that is wet, sodden, or decaying, and do not give large quantities at one time.

COMPOSITION OF EGG FOOD.

Mrs. A. S.—In a general way it is a good plan to give the first few feeds after hatching of pure yolk of egg only, or, say, the first three feeds, which would mean the first day, but this is not absolutely essential to success, and if the parents happen to be specimens which consume a great deal of egg food themselves, and are not over keen on feeding the young it is not always advisable to give this rich feeding for the start, though with good rational feeding parents it certainly helps to give the young a good start in life. I certainly would not advise it to be continued for as long as three days. One day should be quite sufficient, and after that you should begin to add bread crumb or crushed biscuit gradually until by the end of the first week you have the proportions about two parts bread or biscuit, as the case may be, to one part egg. It is rather a contentious point whether both the "white" and yolk of the egg should be used. Many fanciers use the white from the beginning with quite the average amount of success obtained by those who discard it all through. Personally, I think it best to leave out the white in making the egg food for the young during the first week after hatching, the white thus discarded being added to the food for the older broods, or for adults in the flights. After the first week the white can be minced up with the yolk and used in the usual proportions.

EFFECT OF FRIGHT.

G. N., Ipswich.—One can never tell what the after-effect of these shocks may be. Whilst one bird will be exceedingly little affected by them, another will go off song for months, and many never do sing again at all though they may live for years. Try hanging the bird where it will see folk passing near frequently, so that it will be induced to rouse itself a little more to move about. Keep it in a bright and healthy place, free from cold direct draughts or irritating fumes, and in addition to its staple seed diet give a piece of bread and milk the size of a hazel nut dusted with soft sugar every second day for a fortnight or three weeks, and on the alternate days give a pinch of a mixture of equal parts maw, sesame, gold of pleasure, and niger. In the drinking water, every second day for a fortnight, add ten drops of lemon juice and as much chlorate of potash as will cover a sixpence, and on the alternate days four drops each of tincture of gentian, and dilute sulphuric acid and two of tincture of steel. If the bird does not seem sufficiently recovered at the end of the first fortnight, stop the drugs for a week, and then resume them and repeat the dosage in the same order for another fortnight.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

EXHIBITION CAGES FOR FINCHES.

J. H. C.—To exhibit Finches in the cage most suitable for them, so as to show them off to the best advantage, is of far more importance than some imagine. I have seen many a good bird put back a point through carelessness in this matter. The cage for a Hawfinch would be 14 inches long, 12 inches high, and 6 inches deep. One for a Corn Bunting (that is, a full-sized bird), 13 inches long, 11 inches high, and 5½ inches deep. These cages should be made with a front slightly bowed at the top, so that the judge can look down on the bird and get a good view of his back and wings. A feeding trough should be fixed at one end, and a drinking hole at the same place. As regards your Hybrid pairs, I would certainly advise you to remove the cock Bullfinch at once; it is just possible the mischief is already done, and that one of the hens has struck up an acquaintance with him, and she may be spoilt for the season. I have known many promising pairings spoilt by the cock being in the vicinity, and hens feeding well in an outside aviary have deserted their young because a cock Bullfie visited the spot. Take him away at once, not only out of sight, but out of hearing.

SKYLARK NOT SINGING.

Lark Novice.—Skylarks are sometimes very disappointing and steadily refuse to sing, no matter how you treat them. I once kept one for six months without his uttering a note, and when I let him go he soared straight up and sang splendidly. Considering how common these birds are, I think it wisest to let them go after keeping them a reasonable time. It is just possible you have taken to your bird and would like to keep him and give him a good chance. If so, I would advise you to improve the quality of his food. Add a spoonful of meat meal or hard-boiled egg to your present mixture, and procure a pound of insectile food containing ants' eggs, dried flies, etc., and give him a feed of it twice a week. He should also have a mealworm or two, or other insect life, or failing these, just a scraping of lean meat. You do not say if you are keeping him inside or out, but anyway, I would advise him being outside if possible, not for a long time right away, but commencing with an hour or so and so gradually increasing the time. If he can hear other birds sing it may encourage him.

BREEDING WITH LINNET-GOLDFINCH.

May.—Your chances of success with your Linnet and Goldfinch look quite promising, and now they are feeding each other you should certainly run them together and fix up some kind of nesting arrangement for them. If you can get an old nest and fix it in a nesthox with a few twigs round it, it should do admirably. At the same time supply them with plenty of moss and cow hair. The cross is quite a valuable one, and much sought after for exhibition purposes, and the cock birds are good songsters. As regards feeding, you had better continue as you are doing now, and if your Goldfinch food appears to be too rich for the Linnet you can shut him off again after the hen has laid, or when you see that they have paired; but do not put him out of sight, or things may go wrong with them.

LINNET WITH BARE HEAD.

J. P. Thompson.—I am sorry to hear your bird is not doing well since the moult, and no doubt I could have helped you had you given me more particulars as to feeding and general treatment. Evidently there is something wrong in your method, but where the error is I am unable to say without such particulars. Anyway, give him the following stock mixture: canary 3 parts, teazle 2 parts, rape and linseed 1 part each, and collect daily bunches of shepherd's purse, chickweed, groundsel, seeding grasses, and other wild food. Give him at once, for one day only, as much Glaubers' salts dissolved in his drinking water as will cover a sixpence, and repeat three days later. On other days squeeze a few drops of fresh lemon juice in the water. Let him bathe on fine days. I would advise you to get our Nutshell booklet on the Linnet, post free 2½d.; it will help you in your management.

CONCERNING GOLDFINCHES.

C. Harris.—A change of diet is the best treatment for your Finch, but as you do not give me your present method of feeding, I am not able to suggest the alteration, excepting that you could give him a little egg food and a small spoonful of Chemical Food in his drinking water. Let him bathe on fine days, as this helps to lighten the plumage. Keep him in an equable temperature as far as possible and free from draughts. A few seeding heads of dandelion or the young leaves would help him considerably. (2) If you are certain your young Finch is a cock bird, it is just possible the presence of the other stout singers is the cause of his silence. Some birds are too shy to open when others are about. The best remedy is to remove him to a room by himself; about three days a week give him a little egg and a spoonful of soaked seeds. You could also collect dandelion, grasses, etc., and keep him pretty well supplied with these, when he should soon be in song. (3) I expect your Canary went to nest the first time before she was quite ready, or you have been feeding her rather too richly. A little salts in the water will sometimes keep a hen back, but if she has a good feeding cock bird with her he should take over the care of the young. If, on the other hand, she is mothering some Hybrids, you could run the cock in with her once or twice and then remove him. She would be some days before she nested, and might possibly get the young old enough to do for themselves with a little assistance. A good hen will feed the young even while sitting on her second clutch.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

TAME BUDGERIGARS.

E. L. S.—Though bred in captivity, nearly all species seem born with all their wild instincts fully acute, and aviary bred birds are usually very wild when they first leave the nest. If you want them really tame from the beginning you must take them quite young, and they will need feeding at frequent and regular intervals from early morning till late at night. I have not tried hand-rearing this species, but a lady I know was very successful in hand-rearing Black-cheeked Lovebirds, and you would have to adopt the same method with your birds. Treatment is as follows: (1) It is the first day that care is wanted, as after they soon learn to take food from the dish. They should be taken before the feathers begin to form; the most difficult part is keeping the right temperature. Keep them in a basket lightly covered with a piece of folded flannel; stand the basket upon a bath-room cylinder or similar warm position. (2) Feed from 6 a.m. till 10 p.m. Food: Osborne biscuits and crushed wheat, varied with "Uveco" and crushed wheat, made sloppy with boiling water and condensed milk. At first it must be made sufficiently liquid to pour down their little throats, of course only a drop at a time; later it can be stiffer. Keep some seed handy, and as soon as they begin to crack this freely, gradually wean from the soft food. Out of the multitudes of Budgerigars kept only occasional ones learn to talk, but ultimately you should obtain one or more from among your hand-reared specimens, as by the time these are fully reared they should be uncannily tame. Budgerigars require no nesting material, but a cocoa-nut husk must be hung up in one corner of the cage. The usual seeds will suffice for old and young till you take the latter in hand to rear. The flowering and seeding heads of any of our indigenous grasses form the best greenfood while available, and should be supplied ad. lib. We cannot name special dealers or breeders in this column, but an advert in the Foreign Bird column would probably secure someone willing to train one for you; if you do not wish to undertake the task of hand-rearing and training yourself. These birds are hardy and [illegible] the winter without discomfort in an unheated a

LOSS OF GREY PARROT.

F. T. C.—I much regret to learn you have lost your bird, though I rather feared such a result, but still incline to the opinion that an operation by the vet might have saved its life. I am aware that few vets. care about undertaking cases of cage birds, but there are some who have studied bird diseases, and one could have been found; however, it is now too late, and I hope you may soon find another Grey equally interesting. Have the cage thoroughly sterilised before using it for another bird.

SIZE OF CAGE FOR BUDGERIGARS.

A. S.—(1) My reply must be in the negative as your cage is apparently neither wide enough nor high enough, though the length is all right. You say 3ft. x 1ft. x 9ft., without specifying which is height or depth. The minimum depth should be 12 to 15 inches, and the height 18ins. to 24ins. Put a coco-nut husk on each back corner, with the entrance holes facing the light. They require no nesting material. Natural branches with the bark on are best for perching accommodation. (2) Canary and white millet in equal parts, with a dash of oats; also a millet spray and greenfood (the flowering and seeding heads of indigenous grasses are the best, and should be supplied ad lib). Of course, it is understood that such essentials as cuttlebone, grit and water, are continual supplies. Budgerigars are not great bathers in the ordinary sense; when wild they bathe by rolling amid dewy grass and herbage, and if you can give them a small turf of tall grass occasionally, giving it a good watering through a fine rose first, it will tend to their general well-being.

PARRAKEETS FOR AVIARY.

D. T. L.—Redrumps are not noted for amiability, especially when they are the pair in possession; however, your aviary is roomy, and I suggest a pair each of Orange-flanked Parrakeets, Cockatiels, and Black-cheeked Lovebirds or Quaker Parrakeets would form a nice series, and they should be obtainable for about the sum you name. Rosellas have been kept with Redrumps, but I have known of several cases where it has been a case of the survival of the fittest (strongest). Those I have named belong to different groups, and usually agree well together. Small barrels, about nine inches diameter and 12 to 18 inches deep, are the best, but any rectangular box of a similar size will do providing there is a concave cavity at the far end. Such as Crimson-wings and Kings, or Many-colours, would be the best for exhibition, but I doubt them agreeing in the same aviary. Any of the cage-makers who advertise in our pages would supply you with suitable show cages. Any kind of barrel you could get from your grocer, corn chandler, or fishmonger, if well scalded out, the head fitted, and an entrance hole (elliptical) about 2 x 1½ inches cut in near the top answers well, or if you can get a piece of hollow tree trunk, so that the hollow portion is at least six inches in diameter, with boards to block up each end, and a suitable hole cut in for entrance—such forms quite a natural nest. If you have Quakers you must supply them with fine birch twigs, as it is one of the few species of Parrakeets which construct a nest.

YOUNG AFRICAN GREY PARROT, SHIVERING WINGS, ETC.

G. A. J.—So far as I can gather from your query, the movements and posturing you refer to are quite natural in a young bird. As far as talking is concerned, I opine this is merely a matter of time, especially as it so readily mimics any whistling air; in like manner it should ultimately pick up and utter words and sentences. I suggest that you talk to it quietly whenever you are attending to its wants, also when it is in restful mood, and whenever you give it any tit-bit offer it with some such remark as "something nice for Polly," and anything of a similar nature that may occur to you. You can also teach it by constantly repeating to it any word or sentence you would like it to repeat—there is no royal road, it is a case of patience and perseverance, ever bearing in mind that some birds respond much more quickly than others, none are hopeless, as all have the capacity to utter words and mimic all kinds of sounds.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's

A. E. S.—Acute hæmorrhagic inflammation of the bowels. Hen bird.

GENERAL.

Answered by THE EDITOR.

ABOUT A BOOK.

B. Chapman.—The book you mention is out of print; it was not published by us, but was occasionally advertised in our columns until the publishers' stock was exhausted. You will find books on the keeping of British Birds and Canaries advertised on our back page.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

Every Friday, 1d.

Advertisement Forms & specimen copy from "POULTRY WORLD," 154, Fleet St., London, E.C. 4

BOOKS ARE STAR SHELLS

THAT LIGHT THE WAY TO SUCCESS.

Our Handbooks Help Novice and Expert Alike.

CANARY BREEDING FOR BEGINNERS. By CLAUDE ST. JOHN.—An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at Canary Breeding. It contains 116 pages 7in. by 5in., and is profusely illustrated and contains innumerable hints helpful to all young bird-keepers. In this book the reader is instructed how to pair up the stock birds, how to cage and feed them, how to test the eggs, what to do when the young birds are hatched, and so on until the birds are old enough to be put on the show bench. It is interesting from cover to cover, and is by far the best 6d. handbook on the subject ever published. Price 6d., post free 7d. Cloth bound, 1/2.

AVIARIES, BIRD-ROOMS AND CAGES: THEIR CONSTRUCTION AND FURNISHING.—A practical, up-to-date guide on this most interesting subject; written and illustrated by "Cage Birds" artist-in-chief, Mr. H. NORMAN. It is fully illustrated with ten full-page photographic plates and numerous helpful sketches. Bound in cloth Gilt, price 2/-, post free 2/3; paper board covers 1/6, post free 1/8.

BRITISH BIRD MANUAL. By H. NORMAN.—Published in two parts—"Hardbills" and "Softbills." This latest and most up-to-date manual on British birds has been written and illustrated in colours, and black and white, by "Cage Birds" artist-in-chief, Mr. H. NORMAN. The author, who has made a life-study of the subject, gives in these volumes information and hints of the utmost value to all keepers of British birds. Part I., "Hardbills," deals with the Finches, their keeping, feeding, showing, etc.; and Part II., "Softbills," Blackbirds, Thrushes, Larks, Buntings, etc. Price 1/- per part, post free 1/1.

FOREIGN BIRDS FOR BEGINNERS. By WESLEY T. PAGE, F.Z.S., etc.—A most useful manual for all keepers of Foreign birds. It will be found indispensable information of an entirely practical nature—by a life-long specialist—on the keeping and feeding of the more common and popular varieties of foreigners. It contains illustrations in colour, and black and white, of some of the well-known species, and should be purchased without delay by all fanciers who go in for this most interesting branch of bird-keeping. Price 1/-, post free 1/1½d.

HOUSE'S CANARY MANUAL. By C. A. HOUSE.—5th Edition. A thoroughly practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing Canary). An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge. Price 1/-, post free 1/2. Cloth bound, 2/2.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED. By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7in. by 5in., is brimful of the most practical information on the highly interesting subject of Hybrid breeding. Being written by successful breeders, it is quite invaluable to everyone who would also be successful in his hobby. Price 1/-, post free 1/2.

THE STOCK BOOK, OUR INVALUABLE BREEDING ROOM REGISTER.—The stock book which makes bird breeding easy. The hook no breeder of birds can really afford to be without. Everything that a cage bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season. Price 6d., post free 7d.

NORWICH CANARIES. By C. A. HOUSE.—The latest and most practical manual on this popular variety of Canaries. It tells the fancier all that he needs to know to enable him to become successful as a breeder and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal," are worth the cost of the whole book many times over. Price 1/-, post free 1/1.

PET RABBITS, CAVIES AND MICE. By GEORGE GARDNER.—A complete and practical guide to the proper management of Rabbits, Cavies, and Mice. The information given in this handbook is thoroughly up-to-date, and deals with the housing, feeding, exhibiting, etc., of these popular pets. Many illustrations of champion rabbits, etc. Price 1/-, post free 1/1½d.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS. By various Leading Authorities. A comprehensive and complete manual on this most interesting subject. In it will be found information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of all cage birds are fully given. Price 1/-, post free 1/2.

SEPTIC FEVER OR CANARY PLAGUE. By R. H. CLARKE, M.D., M.A.—A very useful booklet on this subject, which should be found in every bird lover's library. Dr. Clarke has given the subject of his book very special study. Price 6d., post free 7d.

Other Books obtainable from us—

BIRDS OF THE COUNTRYSIDE. By FRANK FINN, B.A., F.Z.S.—A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book. 5/4 post free.

PETS, AND HOW TO KEEP THEM. By FRANK FINN, B.A., F.Z.S.—Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises; also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book. 5/4 post free.

EGGS AND NESTS OF BRITISH BIRDS. By FRANK FINN, B.A., F.Z.S.—A most interesting Handbook for all lovers of British birds, containing coloured reproductions of 154 eggs from nature in 20 plates, and 74 eggs in half-tone and other illustrations. Price, 5/4 post free.

THE SMALLEST OF THE CANARY FAMILY.

The Border Fancy Canary, once known as the "Common" Canary, has made remarkable strides in favour since its name was first given to it in 1890. Originally its keeping extended mainly throughout the Border Counties of England and Scotland; hence its name. To-day it is one of the most popular of all the varieties of Canaries, and exquisite examples are to be seen at our bird shows. The Yellow Cock on the left of our picture is the property of Mr. J. H. Madagan, Cheltenham, and among the prizes it has won are First at Reading Show and Seconds at Cardiff, Cheltenham, and Birmingham. The other is the Buff Cinnamon Hen which won First at Cardiff Show for Mr. D. Jenkins, of Swansea.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, **CAGE BIRDS**, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

ALWAYS USE "CAGE BIRDS"

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

6.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—It the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

ENGLAND'S LEADING SPECIALIST
with over thirty years' practical experience in live stock of every description, both British and Foreign, and have been an advertiser in CAGE BIRDS over twenty years, but have never found trade better than now. Last week 76 Linnets left my place for all parts of Great Britain, five of which were sold for £8. Mr. C. H. Fargin, 28, Southgate, Hornsea, bought one of them at a big price; money won't buy it from him; the firm of Fargin is well known. I also sold one of my champions to Mr. Entwistle, H.M.S. Inflexible. The other three to a gentleman at Leeds, which proves I don't keep best back. They are all for sale, no matter how good. I have a grand lot yet for disposal: Cock Linnets, guaranteed Mule breeders, 4/6, 5/6, 6/6; cage moulted contest singers, can win in keen competition, 7/6, 10/6, 12/6, and one a knock out, 20/-; cock Goldfinches, 10/6, 12/6; muling hen Canaries, 5/6, 6/6, 7/6 each; cock Hawfinches, real giants, 7/6, 10/6, 12/6; Roller cocks, 10/6, 12/6, 15/-, 20/-; Roller hens, 7/6, 10/6; long slim Yorkshire cocks, grand stock birds, 15/-, 20/- each; cage moulted Lark, in full song, 10/6; adult Budgerigars, breeding condition, 7/6 pair; fine yellow cock Goldfinch Mule, Finch notes, 10/6; Linnet Mule, pure Linnet song, 12/6; all on approval, cash or deposit; Parrots, cages, seeds, etc., of every description in stock; send your orders to Hull's largest dealer: John Day, 77, Porter-st., Hull. (972)

CANARIES.

Border Fancy.

GOOD buff 1916 hen, 6/-: K. Malcolm, 2, Ballgillo-terr., Broughty Ferry. (972)

AIDS TO SUCCESS.

Our Books and a Common-sense Application of the Advice therein MUST bring you Profit as well as Pleasure.

All the experience of years of careful study by experts is at the disposal of readers.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED.—By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7 inches by 5, is brimful of the most practical information on the highly interesting subject of Hybrid Breeding. Price 1/-, post free 1/2.

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2. "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

FOREIGN BIRDS FOR BEGINNERS, 1/1½.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

THE STOCK BOOK, 7d.—Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages.

CAGE-BIRD-HYBRIDS.—Complete bound in cloth, 7/6 carriage paid. This great work is written by Charles Houlton, an authority with a reputation extending over 25 years as a leading exhibitor and a leading expert and judge. Magnificently illustrated by that great bird artist, H. Norman. There are no less than sixteen coloured and sixteen art plates in this work. Each plate is a perfect study of an individual Hybrid.

SEND YOUR ORDERS AT ONCE, ACCOMPANIED BY A POSTAL ORDER, TO
The Manager, "Cage Birds,"
154, Fleet Street, London, E.C.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright

"EVERYBODY'S"

Series of Popular Handbooks.

Everybody's Book of the Navy.

Everyone realises the vital part our Navy is taking in this great war, in keeping the seas open for our food supplies, guarding our shores from invasion, and protecting our soldiers as they cross the seas.

"EVERYBODY'S BOOK OF THE NAVY" traces the growth of our splendid fleet from its earliest days, giving a "Chronological Summary of Naval History" up to 1840, and the enormous progress made since the advent of iron and steam. A large number of illustrations show the various transformations which battleships have undergone. Another section is taken up with short descriptions of the famous naval battles which have taken place, and the equally famous men who directed them.

Sea terms in general use, signals, flags, and salutes all find their place in this little handbook.

The section on "Machinery and Structure of a Super-Dreadnought," guns and gunnery, the torpedo, torpedo-craft, the destroyer, the submarine, wireless and aircraft, is particularly interesting just now, and should prove very instructive reading.

The last chapter on "The Present Navy" contains a tabulated list of our ships, the Colonial Fleet, the Admiralty and Naval Administration, the cost of the Navy, and other information which all should make themselves acquainted with.

This little book is obtainable for the small sum of 8d. post free from the publishers,
Brindley and Howe, Ltd., Fetter Lane, London, E.C.4.

English Wit.

Do you want a book that you can pick up when you have a few moments of relaxation in these busy days? A book to make you smile and forget worry and care and anxiety for a little while?

Then procure at once a copy of "EVERYBODY'S BOOK OF ENGLISH WIT AND HUMOUR," and you will think the money well spent.

It is only 8d. post free, but it is worth infinitely more; get it and see.

When you have finished with it pass it on to a soldier or sailor friend. They are always eager for something to read, and doubly welcome anything humorous to relieve the monotony of their everyday life.

Don't hesitate. Send 8d. (or 1s. 2d. for a copy bound in leatherette) to-day to the Publishers, Brindley and Howe, Ltd., Fetter Lane, London, E.C.4, and you won't regret it.

Everybody's Gazetteer and Atlas.

It is practically safe to say that everyone has relations or friends serving their country on one of the battle fronts or on the ocean. The war area now covers such a large portion of Europe, Asia, and Africa that it is impossible to keep "au fait" with the movements of the troops without maps and a gazetteer to refer to.

"EVERYBODY'S GAZETTEER AND ATLAS" is a handy little volume of up-to-date, useful information, containing maps, table of distances between principal ports in all countries, index of the countries of the world, showing area and population of each.

Places hitherto little known have come into prominence through the war, and this little book will give the reader at a glance the knowledge he is seeking.

It is a small volume, compact, and neatly bound in leather cloth, price 8d. post free, or 1s. 2d. bound in leatherette, from
Brindley and Howe, Ltd., Fetter Lane, London, E.C.4.

Medical Guide.

Nowadays, when so many doctors are on the various battle fronts attending to our wounded and sick, or on the staff of our hospitals and nursing homes in this country, it stands to reason that those medical men who are trying to "carry on" among the civilian population are overworked, and cases of serious illness take precedence over the little ailments and accidents of everyday life.

Under such circumstances it would be a great relief to be able to turn to such a handy little book of reference as "EVERYBODY'S MEDICAL GUIDE," which gives valuable information on burns, sunstroke, sprains, whooping cough, poisoning, mumps, colds, coughs, etc., etc.

This little volume also contains information on "Laws Relating to Infectious Diseases," invalid dietary and drinks, weights and measures, a chapter on physiology, antidotes for poisons, symptoms of diseases, and hints of various kinds useful in a sick room.

From this brief summary of the contents of the book you will readily realise how invaluable it would be to have it within reach in case of emergency, and when you can procure it for the small sum of 8d. it is not worth hesitating over. So send for a copy now to Brindley and Howe, Ltd., Fetter Lane, London, E.C.4, (8d. post free, or 1s. 2d. bound in leatherette).

Gardening.

Just at the moment Gardening and the practical cultivation of land for food growing is filling a large place in the minds of all. If you are digging and doing your bit on the land you will find "EVERYBODY'S GUIDE TO GARDENING" a most useful and fascinating volume. It is indispensable to the amateur. It contains chapters on the cultivation of fruits and vegetables for every season of the year and every kind of garden. It is copiously illustrated, written by an expert, and is free from that prosiness and indulgence in Latin names to which the average gardening expert is so prone. Here are just a few of the chapters:—

Practical instructions as to how they may be propagated by Seeds, Layers, Cuttings, Buds, and Grafts.

The Best Soil—How it may be tested and prepared—Manures and Plant Foods—the Value of a Hot Bed; How, When, and Where it should be made.

The Kitchen Garden and its Construction.

The Best Fruits and their Cultivation, with the aspect and soil they require.

The Best Vegetables, and how to grow them for a succession.

Summary of work required in the Fruit, Flower, and Vegetable Garden during each month in the year.

Yet these chapters represent only a tithe of the valuable and brightly written information contained in this work.

Neatly bound in serviceable leather cloth, price 1s. 2d., post free.

Brindley and Howe, Ltd., Fetter Lane, E.C.4.

Dressmaking.

Every woman, at some time or other in her life, has attempted to make a blouse, and probably, after one or two failures, has given up trying, considering it a waste of material and time.

Now, when we are urged on every hand to economise, and women are asked to wear their old clothes and save money, is the time to make use of the materials we have on hand, and renovate the clothes we possess to freshen them and bring them up to date.

Any woman who is hesitating about doing this for herself, in case she spoils the garment, should get a copy of "EVERY WOMAN'S GUIDE TO DRESSMAKING."

If the directions in this book are followed it would be impossible to go wrong. They tell you just what you want to know and how to set about doing it.

This book also contains chapters on Rest and Dressing Gowns, Making of Underclothing, Children's Underclothing, a Schoolgirl's Clothes, Baby Clothes, on the Care of Clothes, Dressmaker's Stitches, in addition to those on general dressmaking.

Every woman should write at once for a copy of this book, and when she has glanced at it she will be impatient to start work under its directions. Write to-day to the publishers, Brindley and Howe, Ltd., Fetter Lane, London, E.C.4., and enclose 9d., and you will receive a copy by return post free.

Book-keeping.

Every day it is being more clearly recognised how important it is for everyone to have a knowledge of book-keeping.

Women are in some cases carrying on their husbands' businesses while they are away serving their country, others are taking men's places in offices, banks, and other branches of commercial business, and in all these cases a knowledge of book-keeping would be of inestimable value.

Apart from the necessity of keeping accounts in business, every woman would find it a great help to be able to keep her housekeeping and personal accounts in proper order. She would be able to see at a glance where there is greatest expenditure or leakage, and it would act as a check to extravagance.

This knowledge is within the reach of all by sending 8d. for a copy of "EVERYBODY'S GUIDE TO BOOK-KEEPING." For 1s. 2d. you can get it neatly bound in leatherette.

Get it now and start right away to obtain this information, which will save you time and money.
Brindley and Howe, Ltd., Publishers, Fetter Lane, London, E.C.4.

6d. each (8d. post free), strongly bound in cloth, 1s. each (1s. 2d. post free), in attractive leather binding, or ANY SIX FOR 3s. (in cloth), or 6 for 6s. post free if leather bound.

Cooper's bird sung 130 seconds, in a four minutes' sing though he did all his singing in the last three minutes, Mr. J. Williams, Castleford, bought the bird for £3 after his performance. This is a record price for a Linnet from any of the Kippax members. Some of the best singing was done at this contest that has ever been known, and a novice member won two prizes. 1, Cooper, 130 seconds; 2, Potter, 97; 3, 4, Collinson, 90, 87; 5, Plows, 83; 6, 7, Thomas, 58, 50; 8, Plows, 45. Time-keepers, H. Collinson, J. Liversidge; tappers, A. Cooper, W. Perkin; scorer, T. Pickersgill.—R. Plows, Sec.

Club Reports.

HIGHGATE & HAMPSTEAD C.B.S.

Meeting, May 21, Spencer Hall, Mr. P. Johnston. A discussion on topical subjects, feeding the young, etc., was opened by Mr. F. Knight, who demonstrated his method of making egg food. Opinion varied as to the use of bread or biscuit, either giving satisfactory results. Mr. Johnston gave his methods of feeding, which were very good, as evidenced by the fact that he has an exceedingly large number of youngsters. Owing to a late start a short paper on "The in-breeding fallacy" was not read. A vote of thanks concluded.—F. Knight, Sec.

WALLSEND MID-TYNE C.B.A.

Meeting, Station Hotel, May 23, Mr. R. White presided over a good attendance. Election of judges for N.F. Show and drawing up schedules for same was the principal business. A green Norwich class was added and Messrs. Laidlow and J. Maddison were elected judges. N.F. Show July 14, Neptune Road Hall. We got a special of 5s. for best bird, and 2s. 6d. best Mule. New members elected, Messrs. Graham, Lindsay, J. Hunter, and Wilson. Fanciers should not forget to give our meeting a visit on June 13, at Station Hotel, to hear Mr. Crawhall, Newcastle, give us the great lecture he has on in-breeding. All fanciers welcome and they may hear something to their advantage. Fanciers joining at next meting will be able to show at N.F. Show. A few breeding results were to hand.—Norwich: McCloud, 11; McKay, 10; Scott, 5; McGinn, 20; Fleck, 4; Wilson, 25. Borders: Johnston, 15; Montgomery, 20; Furnuss, 34; Craig, 10; Dunning, 20; Graham, 12. Yorkshire: Robson, 25; Studholme, 25.—Geo. Greenwell, Sec.

AYR C.B.S.

Meeting, May 25, Wallace Tower, Mr. P. McQuiston, presiding. Present, Messrs. Cameron, McLachlan, R. C. Gribben, W. Wilson, Lorie, Lelland, W. Erskine, Tait, Vance, Kermack, and Ferguson. Mr. J. Rennie and Mr. R. Vance were enrolled as members. Captain Jackson, Ayr, Station Hotel, has kindly offered a prize of 7s. 6d. for the F.F. Show, June 30, in New Road Mission Hall. Decided to make no charge for admission, but a collection should be taken at the door for the club funds, Mr. Tait to take charge. Membership fees being due, subscriptions were received from members present. Office bearers elected for season: Hon. pres., Mr. P. Paterson; pres., Mr. J. Cameron; vice-pres., Mr. R. Lelland; sec. and treas., H. M. Ferguson; committee, Messrs. J. McLachlan, J. Tait, and R. Vance, Norwich; W. Lovie, W. Erskine, and R. Lelland, Yorks. and Bord.; J. Rennie and P. McQuiston, Scotch Fancies; R. C. Gribben, J. Girvan, H. Alexander, and P. McQuiston, British, etc. Sec. was instructed to write a letter of sympathy to Mr. and Mrs. Gribben regarding the death of their gallant young son.—H. M. Ferguson, Sec.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

NEWCASTLE C.B.S.

Owing to the inability of the chairman and sec to attend the next regular meeting, June 7, and not to disappoint any member after turning up, w have decided to postpone same until the second Thursday, June 14, which will be an important meeting, to decide for or against an open show members please note.—F. W. Laidlow, Sec.

S. SHIELDS (Always Ready) C.B.S

Meeting Hunt's shop, Ocean Road, May 16, Mr R. Barnes presided over a good attendance. New members elected S. Glendenning and E. Bell, Jarrow Agreed to have the same schedule as last year (30 classes) which gives all members a chance to bring their stock out. We had a further discussion on egg bread, as some of our members are having bad results; we all think there is nothing to beat eggs and biscuits or bread, after all.—J. W Watson, Sec.

MANCHESTER & N. COUNTIES.

General meeting and lecture, May 14, Deansgate Hotel, Mr. A. Hirst, Accrington was elected judge for N.F. Show, July 7. Decided to go to Castle Mills for the ramble, June 3. We hope we shall have a good turn up and shall be glad to see any friends. Train leaves Central Station at 2 to Hale. Those who go by car meet at Hale station not later than 2.30. The lecturer was Mr. Cutmore, Liverpool. He brought a large variety of foreign birds' skins, and some slides of the largest and most expensive aviaries for illustrations which made the lecture most interesting and enjoyable. Next meeting June 11., N.F. Show business.—J. Green, Hon. Sec.

W. BROMWICH & HANDSWORTH.

Meeting May 19, Ivy House Hotel, Handsworth, Mr. S. N. Taylor chair, and thirteen members present. One new member nominated. As the majority of members reported poor results from first round, it was suggested that the first Nest Feather show be abandoned; but it was decided to hold same on the date fixed, June 16, when it is hoped all members who have young birds will do their best to make it a success by staging as many as possible. Schedules will be posted in due course. There will be no charge for admission, and visitors will be welcome. A discussion arose in regard to the Birmingham, Wolverhampton, and West Bromwich Inter-Club Cup Competition, and Sec. was asked to write the other societies concerned, with the object of arranging a meeting of delegates from the three societies. Messrs. Cowley and Taylor elected to represent West Bromwich. Final arrangements for ramble on the following day concluded the meeting.—F. H. Viles.

GATESHEAD C.B.S.

Meeting, May 12, Mr.. A. Holden presided over a good attendance. Mr. Curry being absent from the meeting through business, Mr. Almond kindly took the duties of Sec. for the night, and a good substitute he made. The balance-sheet left over, not being audited for the annual meeting, was read and adopted, showing a good balance of nearly £8 on the year's working. This added to balance in bank, places our society on a fair good footing once more, with a total of £21 in hand. Decided to take up 20 shares in the war loan, which members present thought would be a good and safe investment. The question of a nest feather show this season was left over until next meeting, June 9, when Mr. F. Laidlow is giving us a lecture on the Norwich Canary. A table show for British birds was held, which was rather disappointing in entries, but birds that were staged made up for it in quality. Mr. Almond showed a nice Goldfinch which, with a bit of luck and a good moult will be heard of again. Not being sufficient birds to fill the five classes arranged at last meeting it was decided to make two classes: Goldf. and Bullf.: 1, Almond; 2, 4, Hooper; 3, vhc, Pettersson; hc, Collard. A.O.V.: 1, 2, Hooper; 3, 4, Almond. Mr. F. Laidlow judged and gave satisfaction. For want of time the judging competition was not proceeded with.—A. Holden, Chair.

SHADES OF DARWIN!

An Alexandrine Parrakeet-Wood Pigeon Hybrid Suggested as a New "Species."

A quaint scene in Kensington Gardens just now, writes a correspondent to the London "Daily News and Leader," is a brilliant green, long-tailed, rosy-billed bird that amazes visitors by its swift, strong flights over the elm tops—screaming harshly as it goes. This is a wild Parrot—once a tame one. I learn that it has already weathered several winters in the gardens, and will fly down and take peanuts placed on the fencing. It has no mate of its kind, but has formed a remarkable friendship with a Wood Pigeon, with whom it is often seen in company, and the quaintly-sorted pair fly off together at dusk, and, I am informed, sleep side by side in the same nest. If this is really true, it is surely a fact of great interest and possibly importance in the history of the origin of species controversy. Some scientist properly equipped for the task should watch this couple.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 30/- must be sent to our manager.

Twitterings.

The annual ramble of the Sheffield O.S. is fixed for June 3 (Sunday); meet at Park Hotel, Hillsbro, at 2 prompt, writes Dr. W. Craig.

Messrs A. Maxwell, Partick, and R. H. Livingstone, Rutherglen, will judge our First Feather Show, July 7, writes A. Hamilton, sec., Springburn Possilpark C.B.C.

The "Avicultural Magazine" for May, the journal of the Avicultural Society, opens with an intensely interesting article, "The Coming of the Nightingale," by Mr. W. E. Teschemaker, illustrated by beautiful photographs by Mr. J. H. Symonds of the nest and eggs of the bird and the female Nightingale with nestlings. Another fine photograph by Mr. Symonds in the same issue is of a Robin. Among the other articles are "The Long-tailed Tit," by Mr. P. F. M. Galloway; "Some Tasmanian Birds' Nests," reprinted from "The Emu"; Nesting of the Red-headed Bullfinch," by Mr. Herbert Bright, etc.

A Lecture at Gateshead on the Norwich Canary.

At Lockhart's Cafe, High St., Gateshead, on June 9, at 6.30, Mr. F. W. Laidlaw, secretary of Newcastle C.B.S., will give a lecture on the Norwich Canary. Admission will be free, and fanciers are invited, writes Mr. W. Curry, Secretary.

Not the Gun this Time.

A Hoopoe has been killed by a cat on the shore of Loch Nevis, in Inverness. In recording the instance the London "Evening News" says, "Whether it escaped from a cage or was lost from a passing ship is unknown." The alternative that it might have been a migrant appears to have escaped the notice of the writer of the paragraph.

The "Glasgow Evening Times," referring to the same incident, describes the Hoopoe as of the Hornbill species, and says it "has a beautiful bright red crest and gorgeous colours round body and wings."

A COUNTRY RAMBLE.

Middlesbro and Tees Side C.B.S. held their first ramble of the season on May 26. About twenty members and friends, including some from the Stockton Society, met at Middlesbro and proceeded to Great Ayton by motor 'bus. There they were met by a few Ayton fanciers, and, with Mr. J. Carr as leader, proceeded to the river. Crossing the stepping stones, writes Mr. F. Stothard, we immediately found ourselves in the midst of beautiful hills and dales. We walked along the river to Easby, there to find the advance party in retreat to the high road.

The district seemed very quiet here, and Mr. Robson had first call with a fine hen Partridge sitting on 17 eggs. Then Mr. Carr, with a Yellow Bunting with three eggs. Travelling further along, nests and eggs of the Bunting, Blackbird, and Thrush were in abundance, and as youngsters seemed scarce we all agreed that the severe winter had not only hampered Canary breeding operations, but also those of the wild birds. Proceeding along to Kildale, we partook of a light luncheon, which, although considerably curtailed, was enjoyed by all. Our leader here was in somewhat of a dilemma to understand the new rations, viz., 2/7th oz. sugar and 2 oz. bread to each person.

Our return journey took us into the hills and through the woods looking into Battersby, Ingleby, and Broughton. Passing along again on to the hills, we came to the monument of Captain Cook, the great circumnavigator. Here we entered the haunts of the Redstart and Wagtails; though a little scarcity of these existed, the Chaffinch was in abundance. We travelled the hills and came to the Roseberry-topin, where nesting operations were again in abundance. The only young found on the journey were here discovered, a nest of five Blackbirds, all eagerly awaiting with outstretched neck and open beak the coming of the hen with food.

We now hove in sight of Great Ayton Station, and after a short journey down the hills we dropped into the station in time to take train home to Middlesbro, arriving back after a very enjoyable time had been spent. At our next meeting, June 2, arrangements will be made for future rambles, and those interested should not fail to attend. As this one proved a success, we have every reason to believe our next will be equally successful.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

On Plantains.

THE plantains, in common with hosts of our other wild plants, have joined in the great rush towards maturity since the thermometer rose so rapidly a few weeks ago, and what were then mere rosettes of small green leaves are now fully developed plants in the very prime of their lives.

Of the five native species of plantain in this country, the two most useful to bird-keepers are those which form the subject of this article, and which are shown side by side in the accompanying sketch. They are both widely distributed and abundant plants, and may be found growing in plenty in every part of our island, though whilst the ribwort (Plantago lanceolata L.), A in the sketch, grows almost solely in meadows and grassy places, the greater plantain (Plantago major L.), B, favours cultivated land, waste places, and waysides, but may occasionally be found growing alongside its near relation.

The ribwort plantain is usually the first to flower and ripen its seed, and its characteristic blackish fruiting heads (shown in the sketch), with their white and long-stalked anthers, are already everywhere abundant. The long, narrow leaves with their irregularly toothed edges should also be noted, and contrasted with the large oval leaves of the other variety.

With regard to size, the ribwort is an extremely variable plant, both leaves and fruiting stems reaching anything from an inch to over a foot at the stage of greatest development, whilst the heads themselves may vary from less than half an inch to fully three inches in length, according to soil, situation, and other circumstances.

Medicinal Properties of the Plantains.

This smaller plantain does not appear to be such a general favourite with aviarists as the greater variety, though it would be difficult to assign a reason for this distinction, and many who have given the two plants a fair trial over a long period, both in their green and ripened stages, would tell you that it possesses merits considerably beyond those of the familiar "rats' tails." Its seeds are certainly larger than those of the latter plant, and are more easily gathered and stored, whilst its medicinal virtues have been known, and its healing praises sung, for generations. Even Galen, the celebrated physician who attended the Emperor Marcus Aurelius in the second century, gave the plant great praise for its beneficial effects in cases of inflammation, asthma, and other complaints, and during more recent years it has been largely used for diseases of the kidneys and bladder.

Plantain seeds in general, however, appear to have a slight tendency to constipate, though this action is, of course, not necessarily an evil, and the seeds are often used mainly for this reason when such a remedy appears to be indicated.

The greater plantain, rats' tails, or waybread, should be recognised without much difficulty by the aid of the accompanying sketch, though, like the other species, it varies very considerably in size. It is one of the best known of all our wild bird plants, and both in its green and mature states is of great value as a food and medicine.

It is often a very annoying weed to the farmer, and those readers who are able to assist in gathering it will be giving not only themselves, but also our food-producers, a helping hand in the great national need for economy.

Those who wish to store the ripe seed of these plantains, so beloved of Linnet fanciers, will not, of course, be able to begin collecting until next month, which is the time when the heads usually begin to mature.

Under a lens, it can easily be seen that though the seeds of each variety named here are quite black when fully ripe, those of the

TWO USEFUL PLANTAINS.
A., Ribwort Plantain; B., Greater Plantain.

ribwort, besides being larger in size, are concave in front and of a shining appearance, whilst those of the greater variety are flat in front and distinctly rough.

Valuable Berries for the Autumn.

One of the most elegant of all our native trees has just burst into flower, and its beautiful heads of blossom suggest a sumptuous repast for the Thrushes and Fieldfares later on in the year. This is the mountain ash, rowan tree, or fowlers' service (Pyrus aucuparia L.), not at all uncommon in mountainous woods, and on hillsides.

Although it is in no way related to our common ash tree, the leaves of the two trees are very similar in appearance, but the handsome clusters of creamy white flowers serve at once to distinguish it. A note should be made now of any area where it is seen, so that its valuable berries may be collected in their proper season.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor," CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

Mr. W. Hollinshead, hon. sec. Penygraig C.B.S., writes to say that the paragraph sent by the Chairman, Mr. E. Whitman, and published in "Twitterings" last week, is incorrect. Mr. Hollinshead states that the judge of the F.F. show of the society has not yet been elected.

A small party of the field section of the National British Bird and Mule Club rambled on May 24 from Bookham through the woods and fields to Effingham Common. About 34 species were noted, the most prominent being the Woodpecker, Blackcap, Nightingale, Red-backed Shrike, Snipe, Wheatear, Whinchat and Stonechat. As the season advances it becomes more and more evident that the severe winter has taken a big toll of the resident bird life, nests being very remarkably few and far between.

For the National British Bird and Mule Club annual outing on June 2, writes Mr. T. R. Trower, hon. sec., train leaves London Bridge (Low Level) at 9.25 a.m.; afternoon party Cannon St., 1.7, for Gomshall and Shere. Gentlemen had better provide themselves with light lunch; tea will be provided. On Thursday, June 7 the ramble will be to St. George's Hills. Train to Weybridge at 2.15 from Waterloo, returning from Cobham Station. Friends and fanciers welcome.

OBITUARY.

MR. JAS. SMEATON, MUSSELBURGH.

It is with deep regret, writes Mr. P. Houston, Glasgow, that I have to inform you of the sad and sudden death of that well known and much respected Norwich fancier, Mr. James Smeaton, 8, Bellfield Avenue, Musselburgh. Besides being a keen and successful breeder and exhibitor, and much sought after as a judge, he managed to devote a lot of his spare time to angling, and it was while returning from a day's fishing that he was knocked down by a motor and instantly killed on the public road quite near Musselburgh. The funeral took place to-day (Saturday) in Inveresk Churchyard, and was attended by a very large body of mourners, amongst whom the "Fancy" was well represented. The sympathy of all will, I am sure, be extended to his widow and family of eleven who are left to mourn his loss.

Mr. C. Sykes, Musselburgh, also sends a sympathetic reference to the sad death of Mr. Smeaton.—Editor, CAGE BIRDS.

I regret, writes Mr. T. Judd, Coventry, to inform you of the death of the wife of Mr. W. Elliott, the well known and respected fancier of Burton-on-Trent, death taking place very suddenly. She was taken ill on Sunday evening, May 7, and died at 3 a.m. the following day. I am sure the heartfelt sympathy of all fanciers will be extended to Mr. Elliott in his sad bereavement.

A TOOL-MAKING PARROT.

A Question for the Linnean Society.

A paper on "A Tool-making Parrot" was read by Miss Nina F. Layard, F.L.S., before a joint meeting of the Prehistoric Society of East Anglia, the Ipswich Scientific Society, and the Ipswich and District Field Club, on April 4th, at the Museum Lecture Room, Mr. Henry Miller presiding.

After pointing out that if it could be proved that among the lower animals there were not only tool-users but tool-makers, valuable hints as to primitive man's earliest efforts in this direction might be obtained, as the process could actually be watched in its initial stages, the lecturer described a Parrot which had been in her possession, and which gradually became quite an expert fabricator of small wooden tools, which were used as poll-scratchers; two dozen specimens of the bird's actual handiwork were exhibited. The steps which gradually led up to this achievement were noted. First the bird was observed choosing out the pointed seeds of sunflowers and making use of them as natural poll scratchers. In moulting time her quills were requisitioned for the same purpose. Then the bird commenced to point up a safety match which she had been given. Later still she fashioned small pointed tools from a piece of soft wood which was supplied to prevent the destruction of the perches.

The question which arises is this: Was the bird prompted by instinct or reason? As the subject is to be brought before the Linnean Society, doubtless the point will be fully discussed.

LIVE BIRD LABELS
Always use them when sending birds away by rail.

British Finches for Exhibition

By S. J. NICHOLAS, Swansea.

(Continued from page 271.)

SHOULD you at this season of the year notice them swollen at the vent, give three drops of tincture of rhubarb and a saltspoonful of Glauber salts in the drinking water for two days running, then skip a day, and repeat the dose; this will invariably relieve them. During the spring and summer months gather all the wild food you can and supply to your birds liberally, but do not give green food on the days you are giving medicine.

The most serious time in the life of a F.M. bird is the moulting season. About July your birds will begin to appear listless and look a bit out of sorts, and you can venture that it will not be long before they start to cast their feathers. Remember their future career greatly depends on their first moult. You will ere this have made up your mind what methods you intend to adopt, and in the case of those that are to be colour-fed you will start about the middle of June getting them on to the feed. This gives you time to gradually increase the colour food until you get it to full strength.

The Fresh Air Treatment.

In the case of Linnets, Redpolls, Goldies, Greenies, Bullfinches, and Twites, I have found that moulting them out of doors is far and away the best method. I will grant that they will get a little unsteady, but if properly steadied down before putting them outside they will become almost finger tame in two or three days after bringing them in again.

By moulting them outside, I mean keeping them in the open air day and night, and to do this you must be prepared for all kinds of weather. We will presume you have four birds to moult. You will need to get a light wooden packing case just a little over two feet square, and 18 inches deep. Knock off the top and one side. The remaining side will now act as the top, and the bottom as the back. The side you have knocked off you will utilise to make a sloping roof to the box, covering this and the sides with oilcloth, allowing sufficient to lap over from the top so that you can pull it down on very windy or wet nights.

Hang this box on the wall, out of reach of cats, etc. Inside place four nails on to which you will hang the four cages with the birds in, and there let them remain night and day until they are moulted and fined down. You will ask why I advocate this. My reason is that after carefully studying this matter I have no hesitation in saying that open air plays a very important part in imparting brilliance of colour to wild birds.

Have you ever noticed what beautiful bloom there is on a wild bird when newly taken? Look at the same bird a week or so afterwards, and, do what you will, the bloom has to a great extent vanished, yet I will venture to assert that were that bird given his liberty he would quickly regain his former bloom. I do not infer that fresh air alone is responsible for this; exercise is another great factor, as also are the numberless insects that all hardbills eat in their wild state.

Various Birds, Various Foods.

The best food for the Goldfinch and Greenfinch during the moult in canary two parts, linseed, rape, hemp, teazle, and niga one part each, with a good supply of cracked sunflower. A little egg food and boiled rape should also be given daily in a separate vessel, and also a couple of dandelion leaves, and a plentiful supply of seeding heads of thistle, hardheads, dandelion, dock, etc.

In addition to the seeds I have mentioned a Bullfinch would require in place of the boiled rape a little colour food daily to assist in intensifying the breast colour. Privet berries, if obtainable, also help greatly to produce colour, but I have found that if you feed them nearly entirely on blackberry and elderberries, it will not enhance the colour one bit. Seeding heads of dock, thistle, etc., should also be supplied liberally.

Linnets, Redpolls, and Twites should be fed on one part canary, two parts linseed, with not more than half a spoonful of niga daily. In addition to this they should also be well supplied with seeding shepherd's purse, hardheads, dandelion heads, etc., ad lib. Siskins, Yellowhammers, Bramblefinches, Chaffinches, and all the Bunting family will require colour feeding.

Birds to be colour-fed should be kept in a light, airy room, and their cages placed on shelves that are not exposed to the direct rays of the sun. Some fanciers either cover the windows with orange coloured paper, or shut the cages up, but personally I prefer the window open, and the cages uncovered. The argument in support of keeping the birds darkened is that the light takes the colour out of the plumage. That may be so, but after experimenting both ways I have come to the conclusion that at any rate, as far as British birds are concerned you will get equally as good results with uncovered cages, provided they are placed as I have mentioned, as by darkening the windows or shutting up your cages.

How to Give Colour Food.

Every fancier has his own pet theory as to the quantity of colour food, and mode of mixing. The system I adopt is to mix sufficient quantity at the commencement of the moulting season to last me right through. To 1lb. of tasteless pepper I add ½lb. preserved yolk of egg, ½lb. Osborne biscuits, and ¼lb. of castor sugar, thoroughly mixing the whole lot together. I then store in tins for use. Each day I take out the quantity I require at the rate of a spoonful per bird, and make this crumbly moist with a few drops of water. I then pass it through a perforated zinc sieve, and after this process it has much the appearance of small worms, and is ready to be given to the birds.

Many birds are most difficult to get on to the colour food, and in these cases you will have to remove the seed boxes for a few hours. The best way is to remove the seed box in the morning when you put in the colour food, and return it in the afternoon. Ultimately the bird will become accustomed to the colour feed, and will readily eat it when he has a supply of seed. On no account allow him to be without seed overnight, or he may be exhausted beyond recovery.

Much as I dislike this method, I regret that it will have to be adopted with many specimens you wish to feed, though others will eat the prepared food readily in preference to their seed. If you try the suggestion I made as regards giving the Buntings, etc., a little insectivorous food occasionally, much of this trouble will be avoided, as in place of the egg and biscuit you can substitute the insectivorous food.

When a bird is eating the colour food regularly you will notice that his excrement will be a dark red with a whitish tinge over it. Some fanciers recommend that the quantity of colour feed be lessened when the bird has moulted all except the head, but I have never adopted this plan. Others recommend an addition of hot pepper and the use of sulphate of iron in the drinking water. I do not agree with either of these methods, and have found sulphate of iron to have a tendency to make the birds stick in the moult, and not cast their feathers as freely as without it. As regards its colour fixing properties, I do not believe there is anything in it.

During the moult it will help the birds considerably if you give them a bath or spray with tepid water once a week, taking care to do this only on a warm, bright day.

Final Touches.

Once through the moult we begin to get visions of red tickets, etc. Still there is yet much to be done before your bird is in tip top fettle. At this time and during the show season, to those birds that will eat it, I am a bit more liberal with hemp. This, in addition to putting on a little chest, sustains them and helps them withstand the severe strain of the travelling, etc.

Before attempting to spray your birds see that your spray is working properly and well diffusing the water, not throwing the water in streams, or much mischief will be caused in a very short time. If procurable, rain water with the chill taken off is much the best to use, and to this I add glycerine. You must be careful in the use of this, as if you put too much your birds' feathers will get stuck up, especially about the head, and this and the defective sprays I have warned you about are the chief causes of the twisted feathers about the throat and head, often seen in birds on the show bench.

The proper quantity to use is a teaspoonful of glycerine to about three parts of a pint of water. The glycerine should first be dissolved in a little boiling water, and the remainder of the water added to make it tepid. For birds that bathe themselves you will allow this mixture to cool before giving it to them. Some fanciers use borax in addition to the glycerine, others use eucalyptus oil instead of glycerine. The borax I have found puts a meal on the birds' feathers which is very objectionable, whilst the eucalyptus oil has a tendency to bleach the feathers, therefore I use neither of them.

After spraying, and when the birds are perfectly dry, I take them out of the cage and give them a good polish with a silk handkerchief, but to a young hand this is rather a delicate operation, and he would be well advised to practise this method on one of his less valuable birds until he has gained a little experience. Do not spray your birds later than two days before a show.

A Word About Cages.

During the time he is getting his birds into show form the fancier must be busy seeing to his show cages and cases, and in other ways. Never start the season with dirty cages. Give them a good coat of enamel inside and out, and the perches a good scrubbing. Opinions differ as to the best type and inside colour of a British show cage. Of late years the Scotch pattern with the whole of front to slide out has been the most popular, and personally I much prefer this kind to the bow fronted cage.

A useful colour for the inside, and one that can be used for almost every kind of British bird, is emerald green, to which a little chrome yellow has been added. This latter can be obtained in small tubes at any artist's colourman, the pre-war price being 2d. About a quarter of the contents of the tube to a small pot of green enamel is quite sufficient.

By this time we are all ready for the coming fray. The schedule of the show arrives, you make your entries, and in due course your labels arrive. These are best tied on at the right hand side of the show cage, or stuck on at the side of the water tin. Your cage bottom should be strewn with clean sawdust and sufficient seed placed inside to last a couple of days. Do not be afraid to put a fair quantity of seed in. Much of it will be thrown out from various causes before your bird arrives home again.

And now the critical moment has arrived. Before running your bird in have a good look at him. See that his feet are quite clean, and his feathers in good order. Everything now being right, into the show cage he goes, you look at him admiringly for a few moments, and he is packed carefully in the travelling case, and you take or send your precious burden to the show full of hope.

To the young fancier I would say If you do not manage at first to get one of the coveted cards do not get down-hearted. Ask the judge, if he can spare the time, to give you his opinion on your bird, and where he loses. If you cannot get hold of the judge ask one of the older fanciers, but whatever you do don't start to rail the judge and make audible whispers close to where judging is going on, such as "He can't judge for toffy," etc.

Dogged Does It.

Be sure you are capable of finding the faults in your own birds before you start pulling your competitor's to pieces. Keep a stout heart, and plod on, and slowly but surely you will reach the top. It will be a struggle to keep on the ladder, but when you get to the top you will be all the better fancier for it.

In conclusion, may I be permitted to suggest that it would be to the interest of any society if, say half-an-hour at each meeting were set apart, and members invited to ask questions regarding the little troubles and diffieulties that invariably crop up. Then if other members who probably have experienced the same difficulty gave the methods they had successfully adopted, I feel sure it would interest both old and young fanciers alike. To the younger fanciers I say, Do not be afraid to ask for advice even though it may seem trivial. Small douhts are often the forerunners of grave difficulties.

And to the older fanciers, Do your best with advice and encouragement to help the youngsters along. Just a little word of encouragement given me by an old fancier friend when things seemed very black was the turning point in my career as a cage bird fancier, and in justice to those who helped us in the old days I think it is our duty to see that our help shall not be asked for in vain.

The Sweating Hen.

By E. W. ALLSOPP, Cardiff.

In this article a well-known Canary breeder suggests that feeding has little or nothing to do with the trouble, and that it is caused mainly by improper nests and insufficient fresh air.

THE topic of the sweating hen is one of our hardy annuals, and has some advantage over that of the red mite, inasmuch as we experience the trouble only in the breeding season, whereas the red mite is always with us, but little or no advance has been made in a preventive direction.

We know that in cases of sweating there is a thin watery exeretion of the youngsters, which sometimes makes its appearance immediately after the third day from hatching, but this is an effect for which there is undoubtedly a cause. Sheer nervousness of the hen, which prevents her leaving the nest as freely as she ought, is often furnished as a suggested cause of the trouble.

My own experience tends to disprove this, for upon occasions I have known the most tractable and confiding hens, who left the nest freely, with or without the cock's help, afflicted with the trouble. In fact the few exceptionally nervous hens I have experienced are of happy memory as mothers or nurses; at least since I learnt the lesson of leaving them and their babies severely alone. That some nervous hens are numbered amongst the sweaters I agree; but that nervousness is the cause I suggest remains "not proven."

Feeding Not The Cause.

"Too rich feeding" is another favourite suggestion of the cause. I would ask what is "too rich feeding?" One of the most successful rearers I ever know used merely unadulterated hard-boiled eggs as a soft food; any brand of mixed seed in the hopper, and lettuce, dandelions, and groundsel as greenmeat. My late partner, Mr. Joseph Hopkins, of Swindon, always used one hard-boiled yolk to two crushed Osborne biscuits as the soft food, right through the season; canary, hemp, and rape as a seed mixture, and all that was going in season for greenmeat. We have an esteemed member in Cardiff that has had some wonderful results in rearing with Indian meal as the soft food, mixed seed, and turnip tops the green food.

So far as the first two are concerned I can say with certainty that from the points of view of moulting, stamina, robustness, and proved virility with development towards size, not forgetting the negligible percentage of deaths in the youngsters, and over a period of some few years, no better results could well be wished, and I have good reasons for suggesting that all this also holds good in the latter case. Who shall say any or all of these are cases of "too rich feeding."

Omitting the local instance, because I cannot again definitely say; I do know that in the other instances a case of sweating occasionally cropped up. In fact, if we descend from this seemingly sublime mode of feeding through all percentages of egg used, to the breeders using only soaked stale bread as a soft food, I am sure the "sweating hen" may be found sooner or later in all treatment. In my opinion feeding has little or no bearing as the cause.

The Root of the Mischief.

It is, I think, in the direction of ventilation and atmospheric conditions that we should look for the cause. The receptacles we use for the nests, and the nesting materials offer much room for speculation.

In the old days the wooden box with a bountiful supply of moss, hair, etc., did duty as the cradle; and whilst it would be difficult to prove the existence or absence of sweating in the same degree then as now, it would seem from what we can gather that the evil was not of much moment. Of course it may well be that with the wonderful development of the fancy of late years in numbers now and the keen interest taken in all details of management that more attention has been given to the evil.

On a comparison with Dame Nature, however, it seems apparent that our nest pans and linings, good as they seem, are yet an exceedingly poor imitation of a wild bird's nest, particularly in respect of elasticity and ventilation; which mean comfort and well-being to the youngsters. I know the pans are porous, and ventilation is encouraged by half a dozen or so of quarter-inch holes punctured through the bottom and sides, but they are far removed from the nests of Finches in these respects.

(Continued on next page).

THE TROUBLE OF THE SWEATING HEN.

(Continued from page 295.)

In nest linings we have a choice from the thin flannelette to the thick two-ply felt, much on the lines of lamp-wick in character, not forgetting the thick closely woven brown felts, and thick loosely made shoddy linings.

Mind, I have not yet condemned anything but if it be conceded that free ventilation is imperative for success I would ask if these things are generally helpful towards that end?

Carelessness a Contributing Cause.

Some fanciers are not particular in preparing the nests. Some merely slip in the lining loose, and of course it rests on the bottom of the pan. Further, to avoid damage to eggs, the linings supplied are often times the thickest, and both of these circumstances have tended to less ventilation than might have been secured.

Some are not satisfied unless their linings are glued in from the rim to half way down the pan. Well, a coating of glue, paste, or gum has not helped ventilation. Has it?

True it is that I have noted sweating cases are more generally confined to small pans, and deep down, thick linings, yet I have in mind two cases where fanciers with a misguided notion of things painted the exteriors of their nest pans, and in both instances a crop of "sweaters" was reaped. "Looks a bit significant, does it not?

Where nest pans are large enough and the hens so disposed, I know even if there be anything in these details which tend towards the evil, all would be neutralised by a bountiful supply of moss, hair, and a few feathers sneaked from the screaming cock, thus ensuring a soft, elastic, accommodating bed for the family, not forgetting a free circulation of air; but do we fanciers always see to it that by hook or by crook the family gets this attention.

If we bipeds during a spell of very hot weather have to be circumspect in what we eat and drink to avoid digestive trouble, and have to encourage free ventilation and fresh air to remain fit and well, why not carry the parallel to the bird room?

With a temperature above 70 degrees, and the youngsters at the bottom of a deep nest, surrounded by a quarter of an inch felt lining which is glued to an eighth of an inch earthenware nest pan, and covered by a hen that seems to fit the small pan as tightly as a champagne cork fits the neck of its bottle, is it not possible that bowel trouble is encouraged?

During a spell of much cooler weather I know even under these conditions we seem to make good, but the test comes when the temperature suddenly goes up some, or during the muggy state of air preceding thunder. I may be wrong, but these are the conditions for sweaters as a rule.

Under the circumstances of hot weather and ill ventilation I have known many hens suffer from diarrhœa or bowel trouble when feeding, not because the food was too good, but merely because the ventilation and air was not good enough.

To Overcome the Evil.

There may be "nowt" in all this reasoning, but it seems to me we might banish the risk by giving roomy pans, and fastening a thin lining by just merely the edge, the bottom of the lining when fixed to be quite half an inch off the bottom of the pan. If your pans are nicely bulged this little trouble on your part ensures the lining being suspended; it is free to give a bit when "Tommy" decides to turn over into sister Martha's place; and, above all, ensures free circulation of air.

A little moss, and for preference a little deer hair, because it is short and springy and cannot be too closely woven by the hen, should make the nest all "comfy" and safe in any weather.

In conclusion it is close attention to all these little affairs that will some day solve this breeding season trouble, and will, I am sanguine, ultimately clear up other of our little affairs. Anyhow I feel that the move I and others have taken in this direction towards counteracting the sweating is putting us on the right track, and the least one can do, no matter how sceptical, is to put to the test what I have suggested—fresh air, ventilation, and yet more ventilation, especially with the nests.

A PROMISING YOUNG YORKSHIRE CANARY

Winner of 2nd Prize in the Novice Class at Birmingham Show for Mr. W. C. Clarke, Smethwick.

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. T. Taylerson, 160, Sheriff St. W. Hartlepool.

The Magpie as a Pet Bird.

Mischievous, But Interesting.

Sir,—Although known to most people for its destructive habits in connection with game birds' eggs, which make it a great enemy of the gamekeeper, the Magpie is a beautiful bird with its black and white plumage and long tail, and is often met with in quite large numbers. I have seen as many as twenty-five all together, flying from hedge to hedge. It is also resident in other countries, especially on the Continent of Europe. I have seen lots of them in Northern Russia. It is, as we all know, a bird of prey; it will eat small birds and rodents.

It commences nesting about April, its nest being very conspicuous on account of its size; it resembles the nest of the Crow and Rook, being built of sticks, with a thin mud covering, and lastly, hay, and small dry weeds. It lays from five to six eggs, which resemble those of the Blackbird in colour and size. The nest is generally built in hedges about twelve feet high; incubation lasts about a fortnight, and the young are ready to leave the nest at the age of three to four weeks.

The best time to secure one is at the age of two to three weeks; at that age they will gape very freely when tempted with worms or slugs, so that there is no trouble whatever to induce them to eat. They will do well on this diet until they are about six weeks old, and then they will require a little change; boiled potatoes or bread they greatly enjoy. If placed outside they will leave the cage all day, and return at night. I have had one that did so, and I have also known others. With patience you will be able to teach them to say several words, but things of value in gold or silver should be kept out of the way or they will soon be missing; the birds will take them away and hide them where you might never see them again. I had one that was shot for stealing out of bedroom windows; various things were found two years after in bushes in the gardens and holes in walls. They are also very troublesome if they find where grapes are cultivated. With all their faults they are most interesting to watch as pets, and I would advise readers of Cage Birds to try one, and I am sure they will be well rewarded for their trouble.

Thos. Taylerson.

A Use for Read Copies.

Send "Cage Birds" to the Front.

Sir,—I hope you will excuse me writing these few lines, as I am an old reader of Cage Birds, doing my little bit for the country. The birds here are very busy nesting, and they don't seem to mind the guns firing at all. They are fairly plentiful with the exception of Thrushes; of these I have seen very few. There are several fanciers here besides me, and we should be very grateful if any reader would send us their read copy of Cage Birds. I have not seen one for over ten months, and I am not the only one; we would pass it on.

Birds in the Firing Line.

Like Home—With a Difference.

Sir,—In case it may be of interest to my fellow readers of Cage Birds, I thought I would write you a few lines about the birds out here.

As I am writing, Skylarks, Chaffinches, Blackbirds, and Linnets are all singing mad. They would win kettles, etc., every minute. You would not think that there is a war on if you were to lie down in the fields for an hour or two and listen to the birds. The big guns are thundering night and day, but the birds are like the soldiers, they soon get used to it.

A bird that I have not yet heard is the Song Thrush, but there are plenty of Yellow Buntings, Reed Buntings, Tom-Tits, and Great Tits, and occasionally one can hear the lovely song of the Hedge Sparrow. This sounds like home until the sergeant breaks the charm with the loud shout, "Fall in," and then we know that there is something else to be done besides listening to the song of birds.

Since I have been out here I miss my Cage Birds very much. My wife sends it out to me every week regularly, but it mostly goes astray, and if I am lucky I get a copy once in about six weeks. This is a bit rotten for a chap who has taken it in through good luck and bad luck since its first number.

About the only bird I cannot give a name to is one which is something like a quail.

I should like to be remembered to my old friends in Manchester, especially Mr. G. Clarke, Mr. Rhodes, Mr. Sam Oldham, and Mr. Cooper.

Annual Meeting of the Welsh C.B.C.

Too Late to Alter the Time.

Sir,—I notice in Cage Birds of May 26 that Messrs. Griffiths and Thomas desire the meeting to be held an hour later, i.e., at 4 p.m. I cannot alter the time without the sanction of the officers of the club, and there is no time for me to obtain their sanction before you go to press.

Had these two members adopted the proper and quickest course, and written me, I should have had an extra week to deal with the matter.

We have done our best to meet every member as far as possible, to the sacrifice of the Brecon members, who will have to get a car, for the last possible time for us to leave Abergavenny is 4.30. I fail to see why these members should adopt the course they did. I have answered all correspondence received from any member. If Messrs. Griffiths and Thomas desire any particular item left until their arrival, and if they will write me, I shall be pleased to place it before the meeting and hold it back if it is of such a nature that will be possible to hold over.

D. H. Tedstone.
Hon. Sec.

Birds to and from Shows.

The Return Carriage Difficulty.

Sir,—I see in your correspondence re birds to and from shows that you would be glad to have suggestions as to the best means of overcoming the difficulty of paying the return carriage, and you also say that the exhibitor could send the return carriage with his entry fees or in the packing crate. Now, Mr. Editor, this would cause a lot of extra work in getting the birds away from the station on their return journey, as each crate would have to be weighed, and it is very likely that many crates would miss their train.

I see that "E. E." suggests in his letter that the railway companies allow the exhibitor to pay carriage both ways when booking his birds. I think this a good idea, but I have another. If the companies did not get the labels suggested by "E. E." they could issue two ordinary "paid" labels with a bit of gum paper attached, so that when sending birds away one could be stuck inside the lid of the case with the gum paper, and it would be an easy matter for the show stewards when packing the birds to pull the label off and stick it on the outside. This, I think, would save a lot of time at the station.

W. R. S.

(Correspondence continued on next page.)

CORRESPONDENCE.

(Continued from page 296.)

Is Tredegar C.B.S. Dead?

Secretary Says it is Very Much Alive.

Sir,—I again ask you the favour of publishing this, my last letter on the above matter, and I regret that so much of your space has been taken up. I never thought my friend Mr. G. O. Thomas would allow himself to be a tool in other people's hands. He admits that he has not paid his subscription for 1916, thereby admitting that he is not a member of the Society, and has no right to ask me, as secretary of the Society, any questions whatever.

I have read Rule 7 very carefully, and it is on this rule that Mr. G. O. Thomas has been disqualified. When he assumes the role of prophet as to the members who have paid their dues, I may say that he is entirely wrong. Little matters like those suggested by Mr. Thomas cannot so easily be arranged, and I should hesitate to suggest that anyone would stoop so low as to make such arrangements.

Surely his memory must be very defective when he says that he has not had a notice of any meeting since March, 1916, because I find according to my minute book that he attended meetings at the Silver Grill on Aug. 17 and Oct. 9, 1916, and on the notices convening the meetings it was plainly stated that all members were asked to pay their overdue subscriptions. Further, he admits in his letter of May 12 that he received a schedule of members' show to be held October 12, 1916. If that is so, then he was asked on more than two or three occasions to pay his subscription.

Mr. Thomas again misquotes me in stating that June 2 nearly 12 months ago was fixed for next meeting. What I stated was that the annual meeting was held in March, 1917 (the Editor leaving out 1917), and that the next meeting would be held on June 2, 1917, when he could have the opportunity of again becoming a member if he sent me his entrance fee and subscription. Although it is no business of Mr. Thomas as to when, where, and who audited the accounts, he can rest satisfied that it has been done, and if he is again accepted as a member he will probably be shown the signature of the auditors on my books.

No matter when the next meeting will be held, it should be patent to Mr. Thomas that he cannot attend any further meetings until he complies with my last week's request. I would also warn him to be careful in allowing his name to be attached to letters which bear such mean and degrading insinuations. The above remarks as to subscriptions also apply to Messrs. R. F. Griffiths and G. Bennett. If it is any satisfaction to the above to know, I am pleased to say that we have prospects of a successful season, many new members having been nominated.

W. B. Watkins,
Hon. Sec., Tredegar C.B.S.

Why Members' Shows Fail.

The Value of Combination.

Sir,—It gave me great pleasure to read in Cage Birds of May 19 the letter signed "Novice Camelon," dealing with a few things that appertain to the successful running of cage bird shows. It was all the more interesting to me, seeing that the writer belongs to this district in which my life is cast. I should have liked to see his name at the end of his letter, as I am sure he brings one thing in particular before us that has a very detrimental bearing on the successful running of shows, and that is too many small independent societies. He writes of the state of affairs in this district, Falkirk, but he does not seem to be exactly conversant with the fact that the Falkirk and District C.B.S. tried all that they could to bring about an amalgamation of all the societies. Let me say here that this Society that had been running the most successful show, from a monetary view, as well as having the largest membership and the largest number of entries, took the lead in trying to bring about the amalgamation.

I believe I am safe in saying that the show that was held last year by the joint societies, Bannockburn, Grangemouth, and Falkirk and District, paid more prize money than the other two societies put together that ran a show on their own. This shows for itself that too many independent societies run on a small scale are more of a hindrance than a help to the fancy.

He also says he is of the opinion that shows would not be a failure where there is no opposition if the officials appointed take a real live interest in the work taken on by them. I hope he will come out this year and do all that he can to make the work of the already over-worked officials of the combined societies a good bit easier than they have been getting it for a number of years. They have done well, as he is sure to know if he has been long in this district. Stop helping to keep open the gap that has come in, and join the society that has done all in its power to bring about a better feeling.

He also says that all three societies will go to the wind this year if his suggestion is not carried out, but here I do not agree with him, as the Falkirk and District Club has always been in a good financial position, but it does not believe in hoarding up large amounts. Its policy has always been to benefit its members by paying out a good sum per class, as all are working men, and need all that comes their way to help to keep the stock going.

We all would like very much to see the other two societies come up to the scratch this year by combining with the other three. Let us hope they will, so that "Novice Camelon," as well as all other fanciers in this district, may be brought into closer fellowship one with the other.

I am sorry, too, that some of the older fanciers did not reply to "Novice Camelon," as I do not stand as a champion for the combined societies, but I thought this was a good chance to bring about a better feeling and, perhaps, a united front. Perhaps yet one with a bit more experience than myself may come along with more facts to show that too many small independent societies are a menace to the fancy, especially when these societies are brought about by the result of someone not getting it all their own way.

T. R. Wallace.

A Novice's Experience in Breeding Canaries.

How "Cage Birds" Has Helped.

Sir,—I am always interested in the various ways in which novices breed and bring up young Canaries, and thought I would like to give my experience. It is only quite recently that I have kept Canaries, but, having imbibed some valuable knowledge from the articles of experts which from time to time appear in Cage Birds, I thought I should like to try my luck in breeding them.

I started with two cock birds, one a Roller pure bred, and the other, I fancy, is a cross-bred Border, and it was the latter I intended to breed with, keeping the Roller purely for singing. I procured him a mate last year, but she died whilst laying her first clutch, owing to my then ignorance of management during this difficult period. She was replaced by another who made a nest, but laid no eggs, and sat on an empty nest till she was tired, so my luck was out for that year.

This spring a neighbour gave me a hen of the nondescript variety, heavily variegated, and not evenly at that, but she from the first proved herself bent on business, and has since made a most excellent mother. This hen was mated to the Roller cock early in March, and in spite of the Arctic weather then obtaining she soon made a nest, though she pulled it to pieces several times before it was to her liking, eventually laying her first egg on April 15, and one each successive day until she had four.

Following the procedure of the experts in Canary breeding, I took each one away as they were laid, replacing them by a dummy, and then on the evening of the third day dusted the nest with Keating's, replaced the eggs, cleaned out the cage, took away the cock bird, and left the hen to her own devices, covering the front of the cage where the nest-box was placed with a piece of dark casement cloth.

She sat well, but 14 clear days expired before the first chick made its appearance, and the next one did not hatch out until the evening of the fifteenth day. Of the remaining two eggs one was infertile and the chick was dead in the other. The two live ones have been brought up on the egg bread prescribed by fanciers, the recipe of which has frequently been given in Cage Birds.

After the fourth day I always mixed two drops of cod liver oil emulsion with the morning meal, and furnished the hen with all kinds of seeding grasses, chickweed, dandelion flowers, etc., and have never had the slightest trouble with either her or the chicks. The latter are strong, healthy birds, and left the nest at exactly three weeks from the day they were hatched. One is heavily variegated, though more evenly so than the mother, whilst the other is clear like the father.

As soon as they are independent, and can pick up for themselves, I intend putting the parents together again, and now that the weather is warmer shall hope for better luck, numerically, with the second brood, in spite of the old adage warning us not to count chickens before they are hatched. There are two other points which should not be overlooked if a brood is to be successfully brought off, and they are almost as important as the food question. These are privacy and quietude for the brooding hen.

Novice.

In-breeding.

Fanciers Past and Present.

Sir,—I thank Dr. Stewart for correcting me with regard to the hen that he didn't buy. I remember now that I heard about it from another source, and I congratulated the Doctor upon his pluck in having offered £8 for a three-year old hen. But that does not alter my argument at all, and I ask fanciers to notice the genial Doctor's statement that he has four distinct strains in his room. This year he is keeping them all separate. That may be inbreeding, but note; next year he is going to begin crossing them in. Is that inbreeding? Trust a Scotsman for knowing how to set about it. I am looking forward to something great Ipswich way—especially after he begins to cross them in.

As Mr. Locke asks me a direct question, and as he doesn't bother about credentials, I will answer him; only in future will he please address queries about rats to some better authority? The only thing I know about rats is that they like young pigeons. Anyhow, Mr. Locke assumes facts I cannot accept. He says a male and a female rat will enter a stack, and in twelve months' time there are hundreds of rats. Very likely! but rats are notorious gossipers, and it is known that they will tell all the other rats for miles when they find something good. Besides, rats are not monogamous, but polygamous, and he's a wise young rat who knows his own father.

Mr. Locke confounds pedigree with inbreeding. They are not one and the same thing; and in answer to his query about Mr. Houghton buying that hen I can tell him Mr. H. bought her because she was a good one, and he wanted some fresh blood—for inbreeding—perhaps.

To Mr. House I don't know what to say. He pretends to be bitter because he fancies or imagines a sentence in my paper was offensive. The only sentence which he can thus construe is the one which says that when you are up against Mr. H. you are up against the barbed wire. That was a figure of speech, appropriate to the warlike times, and was intended as a compliment to his ability as a writer and controversialist; and how any man can read it to mean otherwise I cannot imagine.

The way in which he keeps on reiterating my own statement that I claim no credentials reminds me of King Charles's head in a famous novel: "It keeps on coming in." It amounts to this: anyone who believes in inbreeding is a great fancier. He who doesn't has no credentials and must swallow all the advice written.

He refuses to touch my arguments. He walks round them as a child walks round a nettle, and attacks me where he thinks I am most vulnerable—my reputation. Nearly 20 years ago I started to breed Canaries, and have since made the Norwich Plainhead my special study. My credentials have been considered good enough to write the Plainhead notes in Cage Birds Annual for the last five years, and to report for the paper over the same time; yet I am not supposed to know enough to tell other fanciers that Sam Cook's buff cock and Dreadnought were not bred by inbreeding.

I have never attempted to pose as a teacher. I am too wise for that; but I do claim to know a Norwich or a Yorkshire or a Border when I see one. For the last 15 years I have been a consistent student of show reports, and I can honestly say that I have only read of seven out of the twenty-eight names Mr. House mentions as tip-top producers. How long is it since Scarsbrick or Taylor showed a Norwich Canary? How about Mackley, Gardner, Payne, etc.? My father used to talk about them when I was being spanked. Several of them are known to the present generation as Crest breeders, and I suggest that they may have been inbreeders at a time when the Norwich Canary was something like the Lizard.

Fanciers should not be bluffed by a few names taken from some old catalogues, but should adopt Dr. Gordon Stewart's plan of buying the best and crossing them in. That's the best way to inbreed; and please try to remember that Queen Anne is dead.

T. Johnson.

On Making a Start.

Mr. Martin Defends His Position.

Sir,—It is quite true I said what "Lover of a Good Norwich" attributes to me in the May 29 issue of Cage Birds, and I repeat that the statement is a correct one.

That "Lover" has had good success by taking the advice of a seller I do not doubt, but he does not constitute the fancy, even with Mr. Hutton added. Others also may have had good results by the same means, but it should be remembered that I stated "many," not everybody, and I know dozens who have been driven out of the fancy by taking the advice "Lover" would have us believe is O.K.

It must not be overlooked in this connection that Mr. Hutton tells us that we must find an honest and reliable man. I will add all men are honest and reliable till the first wrong is done. We are told in a well-read book not to tempt anybody, and it certainly puts a seller in an invidious position to be called upon to sell upon his own advice.

Respecting honesty, that did not, I repeat, occur in my lecture. For example, I would not trust "Lover," or Mr. Hutton, or anybody else to buy a feather for me, not upon the score of honesty, but of fitness. That is why I said do not trust anybody. The buyer should be the best judge as to what he wants. If he is not then his success is doubtful, vide Mr. Hutton. I agree.

In concluding, "Lover" says fanciers should back up their own intelligence with sound advice. That is the gist of part of my lecture. And again I agree. "Lover's" last words are "We certainly don't want anyone giving us lectures," etc. Yes, we do. That is one of the means of getting hold of knowledge. "Lover" should take my lecture as a whole, and not in fragments. It would be fairer, and serve a better purpose.

F. J. Martin.

Another Pessimist.

Sir,—I would like to give my experience on the above subject. I have been a breeder of Canaries for a long time, breeding them for song and the love of having them. About six years ago an official of the local Cage Bird Society invited me to see his house of winning Norwich, and to my mind they were the nicest lot of birds I had ever seen.

I determined there and then to possess some, so I put myself in his hands and asked him to let me have two pairs that would do me some good both on the show bench and for breeding with. Before I left I had £12 worth from him.

He advised me to join the society, which I did, and at the annual show I staged four of them and they were all cardless. I asked a fellow member what he thought of them and told him where I got them. He told me I had been "had," as they were too small either for show or to breed with and advised me to write to some of the champion fanciers and ask them their figure for a good pair of Norwich.

I did so and bought two pairs at £10 from one of the "nuts" in the fancy. I showed these also at one of the shows in the district and I got a he for one of them. I was paying for my "spoon-feeding" as the saying goes.

I visited all the shows I could travel to that year, and found that there is nothing teaches you better what is a true Norwich than the shows and the judge's opinion. I bred with my pair the next year, and for the product I got 12s. 6d. a pair from a dealer.

I then set out to find the fancier who would give me what I wanted. I therefore visited a fancier who had done a lot of winning that year and saw some that would have suited me, as I had by then an idea what I needed, but he told me they were not for sale. The birds he was parting with were of the same pattern as I had already.

I visited several fanciers and they were all of the same mind; the good birds are not for sale; it is the "scrap" they shove off. The fancier to my mind is not born who will part with a pair of birds if he has any idea that they are likely to breed a "Dreadnought."

Mr. Martin is right; trust no fancier: study type of the special breed you are going in for; get before your mind what you want, go to a fancier, and if the birds you want are not for sale come away and buy from the show bench. You will find it cheaper in the long run.

A. Sticker.

[As the above letter is authenticated by the name and address of the sender we have inserted it as received. We find it, however, difficult to believe that fanciers of repute would treat a novice in the manner stated. No names were given in the communication, and if these had been forwarded in confidence in support of the complaints, some weight might have been added to the statements. The letter must therefore be taken as it stands and for what it is worth.—Editor, Cage Birds.]

'CAGE BIRD HYBRIDS'
THE STANDARD WORK ON THE SUBJECT.
By Chas. Houlton. Price 7s. 6d. net.
"CAGE BIRDS," 154, FLEET ST., LONDON, E.C.

"Nature Red in Tooth and Claw."

BIRDS' nests are robbed by many determined and strange marauders. The squirrel is only one of the many foes to be encountered out-of-doors. It is only those folk domiciled in a well-wooded district where nests are plentiful who can realise the great waste of bird life that occurs during the nesting season. The commoner birds, such as the Mavis and Blackbird, suffer most. Their nests are usually built with very little attempt at concealment. In almost every bush you will find them, and when the season is late, and the leaves as yet afford no protection, they suffer even more heavily than usual.

Of all their varied enemies none is more unrelenting than the Crow. With the skill and persistency of a trained setter this bird quarters through the woods and from bush to bush. In dry weather the ground is hard and grubs are scarce, while up in the trees of the colony the youngsters of the Crow incessantly call for food. The eggs and even the nestlings of the Mavis make choice morsels for the baby Crows.

One morning last season the owner of a large market garden saw a Crow settling upon an apple tree not far from his house. It was not long until a great commotion drew his attention more closely, and he was in time to see the Crow depart with a tiny object dangling from its bill.

The thief was pursued by a Missel-Thrush calling piteously, and no doubt during her temporary absence she had been bereft of one of the occupants of her nest in the apple-tree. Other birds answered the alarm-note of the Thrush, for feathered folk are clannish; but the swiftest entrants were too late to be of any service.

The lean and hungry rat also climbs like a squirrel, and takes a heavy toll whenever opportunity offers. Even when the birds have reared their young, and the nestlings have flown, their enemies are ever on the watch. The wings of the youngsters are not quite strong enough for a long flight, and as they settle on the ground the prowling cats have an innings.—"Greenock Telegraph."

Birds and the Fruit Crops.

I HAVE this spring been carefully watching birds on the fruit trees; watching without prejudice, writes T. A. G. in the "Chester ter Courant." I have no good to say for the Bullfinch, beautiful though the bird is; I am not always sure of the Chaffinch, and the Greenfinch certainly wants watching.

But I speak with no uncertain voice about the Warblers and the Tits; not a single Blackcap, Garden Warbler, Whitethroat, Lesser Whitethroat, Willow Wren, Blue or Great Tit, damaged a fruit bud, though all were constantly in the trees, moving lightly from twig to twig, reaching up, down, under to find and peck off the various insect blights.

It is true that the Tits were less light in their movements, and occasionally "circled the bar" or did some other gymnastic trick which shook off a loose petal, but the slender, light warblers hardly caused a stir of a leaf.

Now I am not going to defend the Sparrow—it is far too abundant and is a most destructive little beast—but we have laws to protect the eggs and young of all these valuable insect-eating birds, and yet we never take any trouble to see that these laws are carried out.

It is a waste of time, the authorities think, to bother about boys stealing birds' eggs; if it is waste, what was the good of passing laws and why bother to keep up a Board of Agriculture? When will the British farmer and the British taxpayer learn that it is to his interest to look after the carrying out of laws which he has a hand in framing?

In the matter of scientific bird preservation and economic entomology—at any rate so far as seeing that the laws are enforced—they have long been ahead of us in Germany and Austria. It may sound unpatriotic, in these days, to say this, but why allow anyone to beat us in common sense?.

HEALTH & STRENGTH

Deals with all kinds of athletics, including **Football, Wrestling, Boxing, Weight Lifting, Fencing, Running, Ju-Jitsu, Gymnastics** of all kinds, **Swimming, &c., &c.** Gives free advice on all questions of Health, Diet, &c., to all readers. **EVERY THURSDAY, 1d. Sold Everywhere.** Get a copy to-day, or send for Free Specimen to "Health and Strength," Windsor House, Kingsway, London.

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Queries Answered

(1)—*All questions must be clearly written in ink (or typewritten) on one side of paper, and conclude with either the correct name or a pseudonym.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper, and enclosed with the query.*

(3)—*Queries intended for different specialists must be written on separate sheets of paper.*

(4)—*Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated on the left-hand corner of the query.*

(6)—*Queries received during any week, up to the* **first post on Saturday morning,** *will be answered in the issue bearing date of Saturday in the* **following** *week.*

(7)—*If an answer by post is desired from our specialists, a postal order for sixpence must accompany any query relating to sickness of birds, or a shilling in ordinary enquiries, with a stamped and addressed envelope in either case. Dead birds must not be sent to the office (see Post-mortems).*

(8)—*All who desire letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence.*

(9)—*All queries must be addressed to the Editor, "Cage Birds," 154, Fleet Street, London, E.C.4. Postcards are not admissible.*

CANARY QUERIES

Answered by CLAUDE ST. JOHN

VANISHING EGGS.

Mrs. Thomas.—If the eggs were really eaten there can, of course, be no question as to which is the culprit, seeing that the cock is shut off from the hen. But in the absence of some convincing proof it is not safe to be too sure that the hen ate them. It is far more likely that they were accidentally dragged out of the nest and got broken in the fall to the floor, and if, as is not unlikely, it was one of those abnormal eggs which had dried into a solid mass, it would not be an easy matter to see the remains among the sand and litter about the cage floor. Then there is the possibility of the egg getting out of sight among the nesting material; and again there are hens to be met with which will habitually throw out an egg or two from every clutch they have. Therefore, as you have lost only one egg from each clutch, I am more inclined to think that it is due to one or other of these causes, rather than to the hen having eaten them. Had she eaten one from each clutch the chances are that she would not have stopped at that. If the eggs were fertile they will have been hatched long before this reply can appear, but even if they were not you could do nothing at all to prevent her eating an egg, or even all of them, if you allow her to sit them herself. The only remedy for this trouble is to get the eggs sat and the young reared by some more trustworthy hen.

WHEEZING YORKSHIRE.

P.W.—(1) The bird seems to be suffering with an advanced type of bronchial trouble, the so-called asthma, in addition to which there is probably some congestion of the liver. You may try what the following treatment for a month or so will do for it, though I am not very sanguine of the bird being completely restored. Continue your present staple diet, but give in addition, separately, half a teaspoonful of a mixture of equal parts maw, sesame, gold of pleasure and inga, every second day, and on the alternate days give a piece of stale bread the size of a small walnut soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar. Give one or two crisp tender leaves of dandelion daily. In the drinking water, every second day for a week, add ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea, and a similar-sized piece of extract of dandelion, stirring until the latter is dissolved. After this give instead four drops each of syrup of squills, ipecacuanha wine, tincture of lobelia and sweet spirit of nitre, every second day for a fortnight. If the breathing is not then quite better stop the medicine for a week, and then begin to give it again, and continue it for another fortnight. Keep the bird fairly warm, free from cold draughts, damp, or irritating fumes in the air. Offer the bath only on quite mild and sunny days, until the bird is fully recovered. The samples of seed enclosed are both of excellent all-round quality, so they can have nothing at all to do with the bird's condition. (2) Treat this hen the same as advised in second part of reply to "A. J. A.," in last issue. Possibly she needs only a little time to get to work. [Your letter was insufficiently stamped, and we were surcharged double the deficiency.—Editor.]

TROUBLESOME HENS.

Miss W. T.—Do I understand that you keep two hens and one cock together in a single breeding cage for breeding? If so, this is not correct, and would tend to create abnormal habits among the birds. You should devote a single breeder to each hen, but one cock can be run with two hens alternately without any risk at all of causing trouble with the young. The hen No. 1 was evidently a non-feeder, and you could do little beyond offering a variety of tempting food, avoiding too much interference if she seems at all of a nervous temperament, offering a scrap of tempting freshly gathered green food, preferably chickweed or the flowering tips of groundsel, two or three times a day, adding a crystal of sulphate of soda the size of a small pea to the drinking water for two consecutive days, and offering a bath daily for two or three days in which you had dissolved just sufficient common salt to give the water a slightly saline taste. This treatment would have been better performed without any other occupants in the cage, and the presence of the other birds would only tend to increase the trouble rather than reduce it, so you will see the advisability, to say the least, of each hen having a cage to herself. No. 2 hen evidently suffered from nesting diarrhœa, which was transmitted to the young birds; and the watery evacuations would be responsible for the sodden condition of the nest. It is just possible that the sugar added to the prepared food would tend to aggravate this, and you should avoid this practice in future. Keep a sharp eye on the hen and young in future broods, and if you notice any signs of slacking or looseness in either treat as follows at once. Make a saucerful of bread crumbs from stale bread, with no crust, and bake them in a moderately hot oven, stirring now and again, until they are of a golden brown all through, and use a third part of these crumbs in the preparation of the egg food, and when prepared sprinkle it with a little carbonate of bismuth. Also add to the drinking water four drops each of dilute sulphuric acid and tincture of opium, for two or three consecutive days, until the droppings are normal. Instead of giving lettuce as green food to a hen troubled in this way give chickweed or groundsel as advised for No. 1, or crisp young dandelion. There is no reason why the egg cake should not prove quite successful, though if you give the full details of the recipe there is certainly some room for improvement. As you have succeeded so well with the dried yolk, however, you might do worse than go back to it, using equal parts of this yolk, plain bread crumbs, and the baked crumbs, as above, in making the food.

BEST FOR BEGINNER.

Beginner.—If your object is to breed songsters pure and simple, the Roller would be quite the best breed for your purpose, but for fancy breeds either the Border Fancy, Norwich, or Yorkshire would suit you. These are among the most free in song and easy for a beginner to breed and manage. Sorry, but we cannot recommend any particular firm or individual, for obvious reasons. Consult our advt. columns.

DIFFICULT BREATHING.

W. J. G.—The first and most essential step towards a cure is to see that the exciting causes are removed, such as keeping in a direct cold draught or where there are sudden and extreme fluctuations of temperature. Above all else avoid keeping the bird in or very near a window. Keep in a comfortable and fairly equable place, and do not hang in high up near the ceiling nor near nor over burning lights in the evenings. Then add to the staple diet a piece of bread the size of a hazel nut soaked in cold milk, drained, two drops of cod liver oil emulsion on it, and sprinkled with soft sugar, every second day for a fortnight or so. On the alternate days add to the drinking water four drops each of syrup of squills, ipecacuanha wine, and sweet spirit of nitre, during the same period, which should suffice to set matters right if there is nothing of old standing affecting the bird.

SITS, BUT NEVER LAYS.

Blacksmith.—(1) The trouble with this hen is that the ovaries have so far remained in a dormant condition, so that she is practically what may be termed a barren hen. Unless she is quite a young hen, say, not past her second season, I doubt if she will ever be of any use as a stock bird. If you have other hens breeding, a hen of this type is not altogether useless, as the services of such can often be utilised as foster parents for either clutches of eggs or broods of chicks which may be deserted by the true parents, and these services they will perform in excellent style. If there is no opportunity of utilising her in this way just at the moment you may try what a two or three weeks' course of treatment as follows will do for her. Remove the nest if she has one, keep her where she can see and hear a good vigorous singing cock, and in addition to the staple seed diet, give a small teaspoonful of a mixture of equal parts hemp, niger, white millet, and teazle, with just a sprinkling of linseed, and yellow mustard, in the bulk, every second day for two or three weeks, and on the alternate days give a similar quantity of soft food with about a third of the same quantity of a mixture of equal parts maw, gold of pleasure, and sesame, mixed in it. For green food give a stool of tender young dandelion daily, gathered fresh, if possible, and given whole—crown, leaves, blooms, seed heads, and all. At the end of this time you may try her again with a strong lusty young cock. (2) This should have been on a separate sheet for Mr. Norman's section. If, as I take it, the bird has been going on its "knuckles" for any appreciable time, it is exceedingly unlikely that any kind of treatment will be of any use, and as it will manage very nicely with one good foot, I would not advise you to worry it with any further treatment. Rubbing or massaging is only likely to aggravate the discomfort by causing additional pain or soreness.

HENS ON STRIKE.

Will Pill.—It is certainly difficult to see wherein the cause of your trouble with the hens not feeding lies. Is the shed, by any chance, infested with mice? If so, try to clear them out as quickly as possible, as it is possible that the disturbance these pests will cause during the night, when they are undiscerned, may largely account for the behaviour of the hens. The quickest course would doubtless be to treat them to a course of the Virus remedy, which you may often see advertised in our columns. Then, how is the ventilation, of which no note appears on your sketch. If there is not already some method of interchange between the inside and outside when the house is closed up for the night, you should arrange for this, which you could do easily by inserting a small aperture in the middle of the front near the floor for the ingress of fresh air, and two similar, but rather smaller openings in each side in the upper angles at the back. These could be provided with shutters to regulate the amount of ventilation to suit prevailing conditions. In addition to this, try the effect of varying the treatment given in last reply as follows. Bake in a moderately hot oven a saucerful of stale bread crumbs, stirring occasionally, until they are of a light golden brown all through, and use an equal part of these crumbs, egg, and either plain bread crumbs or crushed biscuit, whichever you may prefer, for making your egg food. Offer a saline bath the second day after hatching and every second day after for the remainder of the first week, and from the second to the fourth day after hatching add to the water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea, and repeat this for one or two days at any time after that the hen seems to slack in her duties.

YOUNG PUFFED OUT.

L. D.—I do not think there is anything wrong with the bird that is worth troubling about. The dulness is most probably due to your taking the soft food off rather too suddenly. When you wrote, he should have still been having a little soft food daily, but the soaked hemp could have been well dispensed with, and also possibly the soaked rape. To remove any little ill-effects, you might add six drops of syrup of rhubarb to the drinking water for one day only. Then feed as follows for a week or two, and you will probably find that the bird's

CANARY QUERISTS

should consult St. John's "Canary Breeding for Beginners" (7d.); House's "Canary Manual" (1/2); Battye's "Yorkshire Canaries" (1/1½); House's "Norwich Canaries" (1/1); Weston's "Stock Book" (7d.); Dr. Clarke's "Septic or Bird Fever" (7d.); Norman's "Aviaries, Bird-rooms, and Cages" (2/3); Ramsden's "Colour-feeding" (3½d.); "Seeds and Foods for Cage Birds" (1/2); or the "Nutshell" booklets (2½d. each): No. 5 "The Pet Canary," No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 10 "The Roller," No. 23 "The Border Fancy," No. 24 "Green Canaries." All thoroughly practical and instructive. Prices quoted are post free, from "Cage Birds," 154, Fleet Street, London, E.C.4.

QUERIES ANSWERED.

(Continued from previous page.)

condition has become much brighter. In the seed hopper give a regular supply of a mixture of three parts canary to one part summer rape, given dry, and in addition to this every second day give a small teaspoonful of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, or as a change from this now and again you may give a similar quantity of scalded rape. On the alternate days give a similar quantity of egg food, or the equivalent in bread and milk, the latter of which may be sprinkled with maw seed, or, as a variety, soft sugar. A leaf of crisp young dandelion, spray of seedy chickweed, or a half ripe plantain stalk as soon as you can get them, may be given as green food three or four times a week. Keep the cage floor strewn with clean gritty sand, and offer the bath three or four times a week. He may commence to sing more or less as soon as he becomes a little more active, but the full song is not likely to be developed until after the moult. There is no fixed time or age when they should begin; some begin much earlier than others.

SMALL CLUTCHES.

L. Rushworth.—Forty out of a stock of fifty hens addicted to the trouble of laying a clutch of one or two eggs, or even not laying at all, and then sitting on the nest, seems to point to one of two things—either there must be some fault with your general management or it must be a congenital defect among your stock. In the latter case, the only reasonable remedy would be to introduce a few hens from as prolific a strain as possible to mate with some of your cocks, and also a few cocks from a similarly fertile and prolific strain as mates for your own hens, and then work the progeny of these birds back into your own stock in the next season or two. If the fault is due to the management it might most likely have been brought about by the treatment during the winter season, or from the moult onwards to the time of mating, but as you say nothing of your treatment generally, nor mention any details of management, I cannot tell just where the fault lies. I can only advise you in a general way to try the following treatment until the hens have gone to nest for another round and see what is the result, and if it is not considerably better, write again and give the fullest details of your management and where and how you keep the birds. Make up all the clutches of one or two eggs to four, which give to the most reliable hens, and then remove the nests for a week from those left with no eggs and those which are sitting without having laid at all. For three consecutive days add to the water six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, and after this give instead four drops each of tincture of gentian, dilute sulphuric acid, and two of tincture of steel every second day for a week. In addition to the staple seed diet of three parts canary to one part summer rape, give to each pair every second day a teaspoonful of soft food, egg and bread, or any substitute you may use, with about a third of the same quantity of a mixture of equal parts maw, sesame, and gold of pleasure mixed in it, and on the alternate days give a similar quantity of a mixture of equal parts hemp, niger, white millet, teazle, and broken groats, with just a sprinkling in the hulk of yellow mustard and linseed. Give a stool of fresh young dandelion daily as green food. Return the nests after a week, and let them go to nest again in the ordinary course.

CAGE AND DIET.

L. N., Novice.—(1) Certainly, it is quite feasible to put up the wood partition in the double breeding cage and introduce a second pair of birds into the other compartment thus formed, but whether you should do so depends upon your own desire about putting up another pair. But, anyway, as you have given the first pair the run of the whole space up to now, it may be as well to wait until the hen begins to sit before reducing the amount of space she has to exercise in. As soon as she commences sitting you may put in the wood slide, and either place the cock that has been with this first hen in the other compartment with another hen, or leave him where he is and put a second pair, cock and hen, in the second compartment. On the whole, if you have no nursery cages or other spare cages to which to transfer the young when they are ready to leave their parents, I think it may be the wiser plan to leave the cage as it is with the one pair, and then if it should become necessary to separate the young from the parents from any cause before they can quite feed themselves, you would find it most convenient to put them in one side of the breeder and separate them by the wire slide, so that the parents could go on with the feeding. (2) The usual staple seed diet will do just as well for the birds whilst breeding as at any other time. A more elaborate mixture for the breeding is neither necessary nor advisable. Mixed seeds and all extras should be given separately. See latter part of reply to "L. Rushworth" in this issue for particulars of seed mixture and green food. The latter may be varied with chickweed, flowering tips of groundsel, lettuce, or watercress.

LAYING UNSHELLED EGGS.

M. C.—Being a young hen it is most likely that the oviduct has not yet assumed full activity, and it is probable that the next clutch of eggs will be of a more satisfactory character. Stop the chemical food, and give instead four drops each of tincture of steel every second day for a fortnight, or stop it sooner if she should have again gone to nest and laid her clutch in less than that time. Add also to the dietary a morsel of bread and milk sprinkled with maw seed, and when she is again going to nest see that she is supplied with cuttlefish, which, I note, you do not mention in your account of treatment, and also get a little old mortar, sprinkle it with common salt, then smash it up to a coarse sand and strew a little of this on the top of the sand on the cage floor two or three times a week after she is mated again, which you may risk doing as soon as she seems to be getting anxious to start nesting again; that is, of course, if the cock is also in good condition. Do not give any dandelion to this hen as a green food.

OUT OF ACTION.

M. Giles.—I am afraid this hen has something wrong with the ovaries, and is put out of action as far as breeding is concerned, for this season at least. In addition to the staple seed diet give a morsel of bread and milk sprinkled with soft sugar every second day for a fortnight, and on the alternate days add to the drinking water six drops of dilute sulphuric acid and four of tincture of gentian. Give a little green food daily—either chickweed, flowering tips of groundsel, or watercress, preferably in the order named, but avoid giving dandelion. Do not attempt to mate her again until she seems quite strong and active and shows a desire to start nesting, which, I fear, may not be any more this season. You say nothing about the age of the hen, but if she is at all past the fresh vigour of youth I should doubt the wisdom of retaining her as a probable stock bird.

BORDER HENS NOT FEEDING.

Nat.—Giving the hens plenty of egg and tea biscuit may perhaps mean that you give too much, really, or at least in too large quantities at a time. Another thing, you evidently leave the cocks with the hens during the period of incubation, so you would do well to try removing them with the next round of nests, taking them away on the evening of the day the third egg is laid and the hen is being put to sit, and leaving her to hatch out and rear the young by herself. When the young are hatched, a small teaspoonful of egg food fresh twice a day will be ample for the first two or three days. Afterwards gradually increase the quantity as the demands of the young increase, but aim at never having a large quantity left in the saucer when the next supply is due to be given. A little careful observation will enable you soon to gauge the quantity to give at a time. On the third day give a morsel of freshly gathered green food, and after this give a reasonable supply, according to the size of the brood, each morning and afternoon, but see that none is allowed to lie in the cage to become stale or sodden. Should the hens then show any signs of slacking you might try to tempt them by sprinkling a little maw over the egg food, offering a little soaked or scalded summer rape, or a little lightly cracked good sound hemp daily, and add to the drinking water ten drops of lemon juice and a crystal of sulphate of soda the size of a small pea for one or two days as may seem necessary, and offer a saline bath daily for a few days. Beyond this, do not interfere with the hens' arrangements for the young more than is absolutely unavoidable.

THE CINNAMON PUZZLE.

W. H.—If there is really no trace of Cinnamon blood in the dark-eyed cock there is not the remotest chance of pink-eyed young being produced, either cocks or hens. To produce pink-eyed young there must be some Cinnamon blood in the cock, whether there is any in the hen or not.

WILL THEY BREED PURE?

John Tickle.—Your question is rather vague. You wish to know if a Roller hen and Norwich cock are mated whether the Roller hen will breed clear with a Roller cock for future breeds. This I take to mean will the hen breed pure Rollers if mated with a Roller cock subsequent to the mating with the Norwich? If this surmise is correct the answer is an emphatic yes. There exists, I am quite aware, an idea among some fanciers that when a hen is crossed with any other breed than her own the effect is to add a taint of impurity of breed to any future progeny when she is again mated with a male of her own breed. But these superfine technicalities may be totally disregarded for all practical purposes, and all future broods the hen has when mated again to a Roller cock may quite correctly be called pure bred.

TREBLE CONFUSION.

A Beginner.—I fear you have got badly mixed up with your birdy information. The birds you call Spinks are not hybrids at all, but Chaffinches, a pure species of British bird. Then you say the Canaries now have four eggs of their own and two Greenfinch's, the latter being due to hatch in a fortnight and the Canaries' in three weeks. Here there is clearly some mistake, as the eggs of the Canary will take only fourteen days to hatch from the very commencement of incubation. Even if they hatched a week later than the Greenfinch's it would, in all probability, be of no use at all to place them in a different nest-pan with the idea of the cock feeding them whilst the hen finished hatching the other eggs. Altogether I cannot advise you better than to lose no time in sending for a copy of "Canary Breeding for Beginners," which you say you are going to get, and be guided by what you find therein. With regard to your definite questions: (1) It is extremely unlikely that the plan you propose of removing the first hatched young would be a success. The only plan in the circumstances is to leave them with the hen and let both these young and any subsequent ones that may be hatched all take their change. (2) A cock bred last season is quite old enough now to breed successfully. The cause of the first clutch of eggs being unfertile may have been due to many things, the character of the season, for instance. It is quite possible that the present clutch will be more successful. (3) Naturally, I cannot tell whether the birds are likely to breed successfully next season without definite knowledge as to their health and general condition, but there is no reason why they should not do so if in good health and vigour.

A VARIETY.

F. W. M.—(1) I take it that the five weeks old young Canaries had been separated from the parents only about a week or so. During this time it would have been better to have given a teaspoonful of soaked summer rape two or three times in lieu of green food. But from now onwards there is no reason why you should not give a spray of seedy chickweed, heads of shepherd's purse, or the half ripe seed stalks of plaintain as soon as you can get them, or any similar and not too succulent seedy green stuff, three or four times a week. Do not give sufficient at one time for it to lie in the cage until it is sodden, or decaying. (2) If the dietary was already restricted to seed only, it was certainly not correct. You should have been giving a large teaspoonful of soft food to each brood daily at that time, in addition to the seed diet. Give this quantity now, or the equivalent in bread and milk, three times a week for the next three or four weeks, and on the intervening days give instead a morsel of seedy greenstuff, as above, and a pinch of a mixture of equal parts hemp, niger, white millet, teazle and broken groats, or this may be varied occasionally with a teaspoonful of scalded rape. (3) Possibly, being on hard seed too soon, as mentioned in No. 1, is mainly the cause of the mopiness, and the above treatment should pick them up quickly. You may add six drops of syrup of rhubarb to the drinking water for one day. (4) The flight cage 20ins. by 14ins. is quite a small affair, and it would be tremendously overcrowded if you were to put in a division and keep twelve birds in the whole space. I should regard two birds in each compartment, or four in the whole space without a division, as quite "a full house." (5) It needs some practical experience to be able to dispose of one's young stock at this season with advantage. It is exceedingly difficult to tell within reasonable limits how individual birds are going to make up after the moult, and an inexperienced person may just as likely dispose of future winners at wastrel prices as not, or vice versa. If your birds are just common bred stock for singers, and if you could be quite certain of picking out the hens with certainty, you might dispose of these now, or those you did not require for your own use, but for the rest I would advise you to wait until the birds are over the moult, then you should be able to get the real market value for them.

EGGS AND YOUNG.

A. C. L.—(1) Possibly, the ovaries were getting exhausted to account for the abnormal eggs and small clutch, but it is not possible to say definitely what was the cause without very full knowledge of the bird and its antecedents. It may be the first visible sign that the bird is past its vigour as a breeding unit, or it may be simply due to age. There is no reason why the clutch of two should not be fertile. I do not advise you to try any method of forcing her to greater productivity. Leave matters to follow their own natural course. (2) This hen is probably of a highly strung nervous temperament and sits so tightly from nervousness, pure and simple. Did you leave the cock with her when sitting the last clutch. If so, try removing him when she commences to sit on the next clutch, leaving her to hatch out and rear the young by herself. Then leave her as much as possible to her own designs, and avoid all interference that is not absolutely unavoidable. If this does not cure her the most rational course, in case she goes to nest again and hatches a third brood, would be to transfer them to a more reliable hen.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

LINNET DOING BADLY.

E. M. H.—I am afraid your Linnet is suffering from a bout of indigestion brought about by a continuous use of dried seeds, as I gather you have not taken advantage of the coming of summer to offer him the wild foods that are now so abundant in all waste ground and in many gardens. Soak a spoonful of rape and teazle and give him daily. Offer just a cube of bread and milk, dusted with powdered bismuth, and give him warm milk to drink three or four times a day, removing his tin about an hour previously. As he recovers you can gradually get him on to his ordinary diet, adding to it seeding chickweed, shepherd's purse, and grasses; these should be given liberally—in fact, some of my own Linnets almost live on them just now, and are in the best of health. In your future treatment I would advise you to occasionally give him a small dose of salts in his drinking water, which will assist in keeping him healthy. If he will bathe let him do so, on fine days; if not, a gentle spraying twice a week has a very bracing effect.

FEEDING OWLS.

D. Davidson.—Owls are not seed-eating birds, nor will they partake of the usual soft-food given to insect-eaters. They must be fed on mice, small birds, and beetles and any other large insects; failing these, butchers' meat. You see they are rather troublesome pets to cater for, and unless one lives in the country or can procure the above pretty easily, it is doubtful if they are worth keeping. I have had one or two, and although they make delightful pets, I do not now fret after them. For their comfort they should be kept in a dark corner during the daytime.

FIELD MOULTED OR HOUSE MOULTED?

W. Hirstwood.—A field moulted bird is one that has moulted in the open, and a house moulted bird one moulted in captivity. At many of the big shows there are classes provided for both field moulted and house moulted birds, thus allowing fanciers the opportunity of exhibiting freshly caught birds before moulting them out. These classes are mostly provided for Goldfinches, Linnets, Bullies, and Greenies. The Hawfinch, being a much less common bird, has only the one class for it, and should a fancier have a field moulted bird steady enough to exhibit (which is unusual), he would compete with others moulted in captivity.

BRITISH BIRD & HYBRID QUERISTS should consult Moulton's great work, "Cage-Bird Hybrids" (7/6); Norman's "British Bird Manual" (2/3); or Part 1 "Hardbills" (1/1), Part 2 "Softbills" (1/1); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods, and Wild Plants" (1/2); "Secrets of Hybrid Breeding" (1/2); Clarke's "Septic or Bird Fever" (7d.); "Colour-feeding" (3½d.) or the "Nutshell" booklets (2½d. each); No. 1 "Goldfinch," No. 2, "Linnet," No. 3 "Skylark," No. 4, "Song Thrush and Blackbird," No. 11 "Bullfinch," No. 13 "Chaffinch," No. 15 "Greenfinch," No. 22 "Siskin, Redpoll, and Twite," No. 25 "Small Insectivorous Birds," No. 26 "Large Insectivorous Birds," No. 6 "Ailing Birds and How to Cure Them" No. 9 "Disinfection of Cages, Birdrooms, etc.," No. 12 "How to Moult British Birds." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

THRUSH IN SOFT MOULT.

David Williams.—The soft moult is a very troublesome complaint, and is usually brought about by some error in management. Your feeding appears to be good, although lacking in variety. Get a lb. of insectile mixture and give him a feed of it two or three times a week, and another change would be to soak some best quality puppy biscuits, squeeze them dry, and just damp them again with a little milk or gravy. Your bird certainly should have live food of some kind, particularly at this time of the year, when Thrushes in a state of nature live exclusively on it. If you cannot obtain mealworms you can collect quite a quantity of creeping things in even the smallest garden, caterpillars are far too plentiful just now on the fruit trees, beetles, various grubs and green fly are all abundant; a few given daily will have a good effect. Be careful as to the position in which you hang your bird; on no account must he be in a draught; he had far better be outside altogether, although a fairly even temperature is best for him until he has tightened in plumage. Give him the bath on fine days, and put a small teaspoonful of chemical food in his drinking water.

CLEARING ROOM OF MICE.

W. L. W.—I have found nothing to equal the ordinary break-back traps for catching mice. Procure some with a tongue of wood to them, smear these with a little grease (dripping answers the purpose admirably), and drop some grains of Canary seed on it; these will stick, causing the trap to spring easily when the mouse attempts to get them off. Set the traps on the floor, in the corners of the room or round the wainscots. Lean a piece of board over the trap to protect it, but not so close as to prevent it going off.

FINCHES PECKING THEMSELVES.

A. M.—I do not fancy your birds are troubled with insects, because, if these are present they do not live in the wing feathers, it is among the thick body feathers and around the neck that they are to be found. Very clean birds are constantly preening themselves, and for some cause the wings come in for a good deal of attention. Your birds may be a little hot in blood just now, and a mild aperient of effervescing citrate of magnesia, say a small teaspoonful in three tablespoonfuls of water, would probably relieve them. You could give two or three daily doses, missing a day in between each dose. Get a few quassia chips from the chemist, make a strong solution by pouring boiling water over them, and when cold add a few drops to the bath. Do not make it too strong at first, or the birds may refuse to bathe in it. Although there are several remedies for insects on birds, I do not think there is anything so effectual as a free use of the bath.

THRUSH NOT SINGING.

F. W. Murfill.—It appears from your letter that your Thrush is going on very nicely. The soft-moult would naturally throw him back, but your attention has pulled him round and he will doubtless soon break into song. The recording is quite natural, and is the preliminary to the full notes. It is rather unfortunate that he refuses to bathe, and I would advise you to try to get him to do so, if you possibly can. Hang the bath on and then gently spray him; do not make him very wet, only just enough to make him shake his feathers, then leave him for a time, when he will probably have a dip. If he does not do so the first time, try again at intervals, hanging the cage in a fresh position before doing so.

COCK LINNET AND HEN GREENIE.

Nathaniel Dooay.—You are feeding your birds quite right, excepting that you might give half a dozen sunflower seeds daily. Put a felt lining in the cokernut and give plenty of moss and cow-hair, and partly cover over the end of the cage where the nest is. As regards the incubating of the eggs, there is no certainty of the behaviour of the Greenfinch, but I have found them quite as reliable as some Canaries, and, anyway, I would advise you to give her an opportunity with the first nest; if she does sit and rear, she will be far better than a Canary. Feed on plenty of seeding wild food.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

RUNNING AT EYES AND NOSE.

B. Seelig.—I am assuming, as this is rather an old bird, that it allows you to handle it; at any rate, you will have to do this if you are to treat it with any probability of success. Bathe its eyes with a tepid, dilute solution of rose water and zinc. Cleanse its nostrils with a tepid, dilute solution of glyco-thymoline. Put a little honey and borax (only a little at a time) into its mouth once or twice daily, or give this spread thinly on bread, biscuit, or plain cake, or anything similar the bird will eat. Also give in similar fashion a little cod-liver oil emulsion daily. Keep the bird in a warm, yet well-ventilated room, and keep it strictly out of the way of chill winds and draughts, until the present trouble has passed. You make no mention as to how you are feeding and generally treating the bird, so I am unable to make any suggestions on this point. Apparently you have not applied for help till a very late stage of the trouble, and you'll have rather a difficult task to save it, but Parrots have great vitality, and you may do so by careful nursing on the lines indicated above, providing it still lives when you see this reply.

FOREIGN BIRD QUERISTS should consult Page's "Foreign Birds for Beginners" (1/1½); Arthur's "Budgerigors and Cockatiels" (6d.); Arthur's "Parrots for Pleasure and Profit" (7d.); "Aviaries, Bird-rooms, and Cages" (2/3); "Seeds, Foods and Wild Plants" (1/2); Dr. Clarke's "Septic or Bird Fever" (7d.) "Colour-feeding" (3½d.); or the "Nutshell" booklets (2½d. each); No. 6 "Ailing Birds and How to Cure Them," No. 9 "The Disinfection of Cages, Bird-rooms, etc.," No. 14 "Gouldian Finches," No. 16 "Avadavats," No. 17 "The Grey Parrot," No. 18 "Budgerigars," No. 19 "The Pekin Robin," No. 20 "Waxbills." All thoroughly practical and instructive. Prices quoted are post free from "Cage Birds," 154, Fleet Street, London, E.C., 4.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away,** and if a fee is enclosed the loss will be the sender's.

GENERAL.

Answered by THE EDITOR.

OUR WEEKLY PRIZE FOR A LETTER.

C. R. H.—As stated in the heading to the Correspondence columns, the letters each week are judged on their merits as compared with each other, and without any reference to the name of the writer. It may happen that an excellent letter or two may be signed either with a pseudonym or with initials, and such letters are not considered in awarding the prize, it being a condition that the proper name and address of the writer of the winning letter are for publication. Therefore, if you do not wish that a letter sent by you should be for competition, you may either mark it "not for competition" or sign it with initials or a nom-de-plume, and send your proper name and address separately. The fact that a writer has already won a prize will not debar him from winning another. If his letter is the best in any particular week it will get the prize, even if he won the prize in the previous week.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

Every Friday, 1d.

SECRETS
of Famous Canary Breeders
YOURS for only 1/- down

Judging the position of a bird by the clock.

HOW well-known Canary Fanciers bred their prize-winning birds—birds literally worth their weight in gold—how they trained them—the foods used. All this priceless information and much more is clearly given by the Breeders themselves in this splendid Canary Book. Every page—every line—is full of the *practical experience* of practical men—experts in their line. Fanciers who have specialised in Lizards give valuable information. Breeders of famous prize-winning crested varieties contribute to its 380 pages. Every feature of Canary Breeding and Exhibiting is clearly and fully dealt with—you have only to glance at the comprehensive index to turn up the information you desire.

The book contains 133 illustrations, a few of which are here reproduced. Thus, "Our Canaries" not only *tells* you but *shows* you. If you are a novice, or breed only for pleasure, you will be delighted with the increased enjoyment which the book will enable you to derive from your hobby. If you are an "old hand," or breed for profit, it will help you to *increase* profits.

"Our Canaries" will be sent you for Free Examination—Approval for a deposit of only 1/-. If, after examination, you return the book, your deposit will at once be refunded. If, however, you decide to keep the book, you can pay the balance by easy monthly instalments. Thus you have everything to gain and nothing to lose by sending for a copy. Do so TO-DAY

A BRACE OF WINNING BRITISH BIRDS.

Among the beautiful British birds which grace the benches at our shows, few are greater favourites than the Chaffinch and the Bramblefinch, and magnificent specimens of each are always to be seen. The Chaffinch at the top of our picture won 2nd prize at Birmingham Show for Mr. E. C. Brooks, Leicester, and the other bird is the noted Bramblefinch which has won numerous prizes for its owners, Messrs. Lilley Bros, of Derby. Amongst its wins are 1st Prizes at Barrow and Ilkeston Shows, 2nd at Alfreton and 3rd at Birmingham.

F. CARL, Publisher, 154, Fleet Street, London, E.C., 4.

Advertisement Charges.

One Halfpenny for each word up to 48, 1d. per word afterwards. Name and address to be reckoned. Minimum, 12 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and are charged at two words a penny up to 48 words; after that 1d. per word. No single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines, 9d. 1/-, 1/6, 2/-, 2/6, according to size.

The rate for displayed advertisements is 7/6 per inch. Rates for a series on application.

ADVERTISEMENTS UNACCOMPANIED BY CORRECT REMITTANCE WILL NOT BE INSERTED.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements must in all cases bear the bona-fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London, E.C.4. Terms for Display Advertisements on application.

NOTICE TO BIRD PURCHASERS.

It is advisable that all newly-purchased birds, especially foreign birds, be kept isolated from established stock for a week or ten days, until by their condition they establish the fact that they are thoroughly healthy.

APPLIANCES.

BIRD sand, 3.9 cwt., carriage paid: Richardson, Horace-st., Boston, Lincs. (936)

OUTDOOR aviaries, bird houses, designs forwarded: L. Latham, Kingston-by-Sea, Sussex.

TWO Thrush cages, in good condition, 20 x 20 x 11, with bath, 10/6; 20 x 17 x 10, 8/-: 36, Queen's-cres., Edinburgh. (981)

WHAT offers? In or outdoor aviary, 40in. wide, 58 high, 22 breadth, door each end; also good Roller hen: Lockley, 118, Wood-st., Kidderminster.

Send post card for new Illustrated Catalogue; all goods sent carriage paid: Enoch Tams, Church-st., Longton, Staffs. (972)

ALWAYS USE "CAGE BIRDS"

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insisted upon

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from both parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient plus the extra postage incurred has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

NESTING UTENSILS.

White Deer Hair, 2/6 lb.; White Cow Hair, 2/6 lb.; Brown Cow Hair, 1/9 lb.; selected Dry Moss, 1/6 lb.; mixed Nesting Material, 2/- lb.; Felt Nest Linings, 1/2 dozen; China Eggs, 7d. dozen; Egg Cabinets, six divisions, 1/6 each; Nest Boxes, 3/6 dozen; Feeding Boards, 3/6 dozen; Nesting Racks, 3/6 dozen; Wire Salad Racks, 3/6 dozen; Wire Cuttlefish Holders, 1/3 dozen; China Egg Pans, 3/6 dozen; China Finger Pots, 1/9 dozen; Celluloid Rings, all colours, 5d. dozen, 5/6 gross.

Bath and nursery cages combined, 3/-; all-metal seed mills, 3/-; large enamelled egg and bread mills, 5/-; aluminium Canary rings, with year and numbered consecutively, 9d. dozen, 3 dozen 2/-, 6 dozen 3/6, 12 dozen 6/6.

Send 3 penny stamps for Sample.

JOE THOMAS, Amber Thorn, Halifax.

MEDICINES.

NON-FEEDING HENS

Smith's non-feeding hen medicine has proved a boon to hundreds of fanciers; one writes, "Lost 15 out of 16 young birds before using, since have reared 16 out of 18. Going-light medicine also a marvel." Bottles 8d., 1/2, 2/-, post paid: Smith, 73, Audley-st., Reading. (924)

YOUNG BIRDS DYING.

DITCHFIELD'S TONIC DROPS

are a guaranteed cure for Not Singing, Soft Moult, Slow Moult, Going Light, Feather Plucking, Dulness, and Inflammation of the Bowels. Also if you are having bad luck with your young birds try our Tonic Drops; they prevent Going Light, and aid digestion so common with young birds. Ditchfield's Tonic Drops are undoubtedly the grandest Pick-me-up ever introduced for young birds. They are invaluable when getting them on hard seed.

DITCHFIELD'S FAMOUS REVIVO

is absolutely unequalled for giving new life and vigour to birds, and for producing that smart, tight appearance of plumage so much desired by all fanciers.

The above two Medicines given on alternate days will bring any bird into first-class condition.

DITCHFIELD'S SPECIAL LUNG TONIC,

for all Chest and Lung Affections in Cage Birds. Can be given with absolute confidence to the most weak and delicate birds.

DITCHFIELD'S DIARRHŒA POWDERS

for all classes of cage birds is safe and effective and gives instant relief. A pleasant, safe remedy that can be fully relied upon. For young birds these Powders are absolutely unequalled.

All the above remedies are sold in 8d., 1/2 and 2/2 bottles; two 8d. bottles for 1/2, three for 1/8; two 1/2 bottles for 1/11, three for 2/8; two 2/2 bottles for 3/9, three for 5/6, and are sent away **POST FREE** per return from:—

FRED ALLEN, BRITISH BIRD CHAMPION

4 CHALLENGES.

"Seeing Mr. J. Day, of Porter Street, Hull, says he has a Linnet that can beat anything in Hull, and that he has judged hundreds of contests, I will wager him £100 that he fails to tell the notes of a Linnet I will put up, £100 that he fails to judge a Linnet contest correctly, £100 that I tell him every note of any Linnet he can put up, and fourthly, I will sing him for £100. I have deposited £25 with the Editor. If he wins he can keep it; if Irwin the Editor can give it to any war charity he favours, **and I will pay £5 for the judges' expenses.**" The above are four challenges I issued to Mr. J. Day in "Cage Birds" of May 26, but up to the present he has not accepted. Why??? Gentlemen, if you want a Linnet, send to the man who knows a good Linnet when he sees one. I have a grand lot of Linnets, all mad proud, 5/6, 6/6, 7/6, 10/6 each; also several which won prizes at Leeds, Castleford, etc., on Whit Monday 12/6, 15/6, 20/-; cock Thrushes, full song, 5/6, 7/6; cock Blackbird, loud songsters, 7/6; talking Parrots the largest stock in Yorkshire, 10/6, 20/-, 30/-, 40/-, 50/-, 60/-, 70/-. Stamp for list. All birds on approval. Write at once; you will not regret it. I have hundreds of testimonials. State wants please to—**FRED. ALLEN, England's Leading Specialist, 156, Porter Street, HULL.** (978)

LADIES!

WOOD'S CHALLENGE REMEDY

is guaranteed under the sum of £100 to cure when others fail. Far superior to Pills, Pellets, or any Continental treatment. For all cases of irregularities, however obstinate, CHALLENGE REMEDY is supreme. Price, 3/-, 5/-. Special, 12/-. Stamp for Advice. Est. 30 years.—MR. & MRS. A. K. WOOD, Medical Specialists, 20, Louis St., Leeds.

A POST CARD ONLY You cannot hold your own in life's battle if weak, worn, or easily jaded. Periodical attacks of moodiness, languor, despondency, depression, and groundless fears mean nerve troubles and lead to brain fag, impaired memory, and unfits one for study, business or pleasure. The chosen ones in every walk of life are the alert, the bright, and the intelligent, nature's natural gift, but marred for lack of a little knowledge. A post card to the Useful Knowledge Publishers, P.O. Box 94, Bradford, will put you in possession of a 48-page book, neatly bound, of valuable information, and will be sent post paid free of any charge whatsoever if you will mention CAGE BIRDS. A little knowledge saves much medicine. [Copyright.

Rabbits.

LARGE selection of tame rabbits for pets or utility, 3/6, 5/6, 7/6 and 10/- per pair; lovely prize-bred Angoras, 7/6 pair; large stock of Flemish Giants, Belgian hares, tame rats, mice, chicks, bantams, poultry, etc.: Princess Livestock Emporium, Brook-st., Manchester. (981)

NOTICE TO READERS.

In view of the large amount of business done between our advertisers and readers, and to ensure satisfactory transactions, attention is directed to our deposit system, particulars of which are given at the top of first advertisement page.

AIDS TO SUCCESS.

Our Books and a Common-sense Application of the Advice therein MUST bring you Profit as well as Pleasure.

All the experience of years of careful study by experts is at the disposal of readers.

THE SECRETS OF HYBRID BREEDING REVEALED AND EXPLAINED.—By many notable Mule and Hybrid Breeders. Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. H. Kinch, T. Smith, etc. This Handbook, which contains 212 pages, 7 inches by 5, is brimful of the most practical information on the highly interesting subject of Hybrid Breeding. Price 1/-, post free 1/2.

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal" are worth the cost of the whole book.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part I: "Hardbills," and Part 2. "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

FOREIGN BIRDS FOR BEGINNERS, 1/1½.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

THE STOCK BOOK, 7d.—Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in adition to useful account pages.

CAGE-BIRD HYBRIDS.—Complete bound in cloth, 7/6 carriago paid. This great work is written by Charles Houlton, an authority with a reputation extending over 25 years as a leading exhibitor and a leading expert and judge. Magnificently illustrated by that great bird artist, H. Norman. There are no less than sixteen coloured and sixteen art plates in this work. Each plate is a perfect study of an individual Hybrid.

YORKSHIRE CANARIES, 2/2.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

Club Reports.

NATIONAL BRITISH BIRD & M.C.

Meeting at Red Lion Hotel, York Street, Piccadilly, S.W., May 31, Mr. John Robson chairman. Among other business, Mr. T. R. Trower gave a very interesting review of the ramhles taken by the field section of the club, giving lists of birds, nests, and eggs seen, and saying how backward bird-life was this year. All present joined in a good discussion. Arrangements were made for annual ramble to Gomshall and Shere, June 2. We were very pleased to welcome one of our provincial members at the meeting, Mr. C. G. Taylor, of Cambridge.—E. Stephens, Hon. Sec.

PONTYPOOL C.B.S.

Meeting, June 2, headquarters, Mr. D. R. Smith presiding. Questions asked in reference to N.F. Show. The question of our open show inadvertently again clashing with Aberdare was raised from the minutes, and it was unanimously resolved: "That the date be changed to Dec. 20, and that the same be duly advertised in the guaranteed column of Cage Birds. The question of obtaining a members' cup created an interesting discussion, and it was unanimously resolved: "That a cup be purchased"; rules, etc., to be drafted at another meeting. Decided, to apply for the W.C.B.C. patronage. Sec. was instructed to communicate with the Rev. Joliffe, Cardiff, to ascertain if he could arrange for a lecture. The question of South Wales Federation was considered, but was adjourned for further information. Members are requested to take an active interest in affairs of the society, and not leave matters for the faithful few.—W. D. Lewis.

LANDORE & PLASMARL C.B.S.

Meeting May 29; Mr. D. C. Jones presided. Decided to hold F.F. show July 28, at the George and Dragon Hotel, Landore. Judges: Canaries, Mr. D. H. Davies, Llanelly; Mules and British, Mr. Alf. Hitching, Swansea. Birds to be staged at 2. Sec. to print schedule and forward same to all local exhibitors. Specials were given by T. James, A. Bowen, A. Hitching, Fry, Rees, Morgan, Thomas, Jones, Lispoombe, Hart, it being decided to hold a few over for open show. Re open show, sec. was instructed to write judges, etc., also to draw up classification for same at next meeting, June 19, at 7, at headquarters, George and Dragon Hotel, Landore.—H. Fry, Hon. Sec.

CINNAMON-MARKED Y.C.C.

Annual general meeting, May 26, Mr. Clegg chair. Sec. read balance sheet, showing a balance of £3 15s. in the club's favour, and this was considered to be very good, seeing the times we were passing through. Officers for ensuing year elected: President, Mr. E. Clegg; vice-presidents, W. Richmond, Dr. Craig; committee, J. W. Bedford, G. Pownall, S. Midgley, G. Snead, A. Cooper, J. E. Hudson, W. Gledhill, W. A. Cowgill, J. E. Kaberry, A. Firth, H. H. Towers, O. Atkingson, B. Townend, W. B. Atkingson, A. Whitley, J. W. Baker, F. P. Terry, A. M. Craven, C. Morrison; sec. and treasurer, R. Garnett; auditors, S. Midgley, J. Firth.

Votes of thanks to retiring officers were passed. Mr. Clegg replied, and pointed out that it was now the duty of fanciers to pull together to keep our institutions going until this terrible war was over, to get new members, and to try to interest breeders in the different clubs for fostering, breeding, and exhibiting Canaries. A special vote of thanks was given to the givers of money and value to our competition prizes, and the sec. pointed out that without the help we received in this direction we could not give such valuable prizes, as our sub., 1s. 6d. per year, was far too low to allow us to do it. The committee have always to work to make out as valuable a list as possible, and it was hoped that new members of the committee would attend, and if possible make a better list of specials than in the past. Decided to have three competitions, as last year: Open, Amateur, and Novice, and held under the same conditions as last year. Decided, to adopt the new standard for marked birds, as passed by the Yorkshire Union, and that Cin. Marked classes where our patronage is given, must be worded as follows: Cin. Ticked, Marked, or Variegated Yorks. Yell; ditto. Buff; ditto, Yell. Hen; ditto, Buff Hen. At Yorkshire Union shows it is compulsory, if they have our patronage, to make two novice classes, worded: Cin. Tick. Marked, or Variegated, Yell. or Buff Cock; ditto, Hen. At shows which have our patronage, outside of Y.U. shows, these novice classes are not compulsory. All applications for patronage must be in my hands by June 25; patronage will be allotted on June 30. A few members have not paid their subs., and I hope they will do so at once. Members who have changed their addresses, or whose address in our hand book is not correct, please drop me a P.C., so that I can get them altered this year.—R. Garnett, Sec.

LIVERPOOL B.B.A.

Meeting, May 10, Oldham Hall, Mr. Brunner chair. Two new members were elected, and there was a very fair attendance. Mr. Knowles read a paper on "Ailments of Young Birds," which was much enjoyed. Members took full advantage of the invitation to ask questions which were suitably answered. Many members reported having a good start for the breeding season, and it is expected that our nest feather shows for this year are to be records for the Association.—T. R. Jones, Hon. Sec.

SACRISTON F.F. & C.B.S.

Members who are claimants of money please attend meeting in Mrs. Abbott's Tea Room, Club Room, June 9, at 7, so that they may receive their awards. I will be in communication with others by June 12. After knowing our condition ten weeks ago we have managed to raise funds of £15, which will clear us. We are having a young stock show Aug. 25. Those wishing to exhibit at members' show, Dec. 15, must pay their sub., 2s. 6d., not later than Sept. 30.—R. J. Scorer, sec.

QUEEN'S PARK (Glasgow) C.B.S.

Meeting, May 30, Mr. R. B. Cairns presiding over a good attendance. One new member admitted. Nomination of judges and classification for F.F.S. at headquarters, July 7, at 3.30 p.m., were taken up—15 classes: 4 each Norwich, Border, and Yorks., viz., Cl. or Tkd. Yell. Ck. or Hen and ditto Buff; Variegated Yellow and Variegated Buff; one Crest or C.B.; one A.O.V.; one Mules or Hybrids. Entry 3d.; specials to be allotted on day of show. The hat night which followed was entered into with enthusiasm. A ramble was decided on, arrangements being left in the hands of the sec. Vote of thanks to the chair closed the meeting; next meeting, June 27.—A. Foreman, Sec.

MIDDLESBRO' AND TEES-SIDE.

Meeting Crown Hotel, June 2. Mr. C. Watson presided over a good attendance. New members were again admitted, including some from Southbank, Stockton, and Darlington. Decided that, owing to difficulty to obtain colour food as before, each member use his own judgment as to advisability of colour feeding. Also decided to join Guisbro C.B.S. in a ramble from Guisbro (June 9), members and fanciers desirous of joining us to meet at Middlesbro Station and journey by the 2 o'clock train. June 16 selected as date for ramble to Pinchinthorpe, leaving Middlesbro at 2.40, and from there walking to Cross Keys and over the hills to Eston. A hearty welcome is extended to anyone desirous of joining us.—F. Stothard, Reporter.

Aberdeen Amalgamated C.B.S.

A Suggestion as to the Return Carriage.

Meeting, May 25, Trades Hall, Belmont Street, Mr. John Hector presiding. Present, Messrs. Balfour, Christie, Gibson, Grieve, Kirton, Knowles, Low, Mutch, Reid and Stephen. It was question night and the members present freely expressed their experience and remedies on such problems as: Substitute for egg; sweating hens; nesting diarrhœa, green food, etc., and the novice got some valuable information from the "old hands." The return carriage difficulty was also discussed at length, various ideas being put forward, and one which the meeting thought a good one was to charge 6d. extra for each entry from exhibitors showing from a distance. A vote of thanks to the chairman for presiding brought an enjoyable and instructive meeting to a close.—R. J. Robertson, sec.

BLAYDON-ON-TYNE C.B.S.

Meeting June 2. Mr. P. Lynn presided over a large attendance. The chief item was the Nest Feather show. We have had to alter date on account of the room being taken, so show will be held July 7, birds to be staged at 2, the show to close at 8 prompt. Judge not decided yet, through change of date. There will be 20 classes, three each for Norwich, Yorks., and Borders, Crests two, A.O.V., Goldf., Bullf., Greenf., Linnet, Siskin, Redpoll, or Twite, A.O.V., also hen A.V., Mule A.V. Mr. G. Simpson and J. J. Walker gave their report from the bank, which proved satisfactory. Sec. was instructed to deposit £8 in same. Mr. W. Bolam promised 5s. for most points in Border section and 2s. 6d. 2nd most points; G. Simpson, 2s. 6d. most points in Yorks.; R. Johnstone, 2s. most points British classes by a novice; George Dobson, 2s. 6d. for most points gained by a novice in the show. A special is likely to be for most points in the show. We were sorry to have the resignation of sec. Mr. Geo. Dobson, who is well known, was proposed for same, and after a long discussion he decided to take it for the rest of the year; next meeting June 30, a week earlier on account of the show being held on the meeting day. All letters and correspondence to be sent to Geo. Dobson, 103, James Street, Blaydon-on-Tyne.—J. J. Walker, Sec.

TREDEGAR C.B.S.

Meeting "Silver Grill," June 2, Mr. E. Powell chair. New members elected, Messrs. Lewis and Lippiatte. Decided to hold N.F. show at Greyhound Hotel on Aug. 11; 8 classes (4 champion, 4 novices). Judges were nominated; names will be published on acceptance. Members will be sent schedule later. The trophies, both champion and novice, will be up for competition at this show, and fanciers wishing to compete for same can do so by becoming members. At the request of members present the sec. promised to say a few words at next meeting on "How to feed and wean young Canaries." As I am anxious to increase our membership I would be very pleased to hear from anyone wishing to join. —W. B. Watkins, Hon. Sec., 32a, Whitworth Terrace.

SOUTHERN ROLLER C.C.

A Lecture on Roller Canary Tours.

Meeting May 29, Imperial Restaurant, Old Bailey, London, E.C. Capt. Bloomfield presided over large gathering, which included several lady members and visitors. Messrs. Aspinall and Hocking were appointed delegates to represent club at the conference of non-federated clubs. After other club business had been expeditiously dealt with and ten new members proposed by the sec., the members settled down to hear Mr. Fisher's lecture on "Some Training Reminiscences and the Great Glucke Tour." As was to be expected from a judge of Mr. Fisher's experience, the lecture proved of more than ordinary interest, and members present were given a treat.

Dealing with his training reminiscences, the lecturer gave an interesting account of how he was converted some 25 years ago from Crests to Rollers through hearing the latters' song, and proceeded to give a graphic description of the methods of training in vogue at that time, when the Deep Glucke and Deep Bubbling Water Tour were very prominent in the English-bred birds. The famous Seifert birds of the period were very deep and pure in tone, and excelled in their Bass and Hollow Roll. Their repertoire was, however, limited to some four or five tours, and it has been the ambition of Roller fanciers since then to produce a strain of birds that possess a greater variety of tours, and at the same time retain the purity of song which characterised these Seifert birds. Experimenting on these lines, Mr. Randall, of Wimbledon, produced a strain that possessed the very beautiful Water Glucke Tour, which, given in a rising and falling manner, constituted, in the lecturer's opinion, the most charming of all the Roller's song tours.

Passing on from the various methods of training and the precautions to be taken against the young birds' song being contaminated by unpleasant sounds, the lecturer proceeded to the second part of his discourse, dealing with the controversial Glucke tours. Doubtless the correspondence on the Bell Glucke Tour which has recently appeared in Cage Birds had served to arouse the interest of all present in this tour, and the views of so experienced a judge as Mr. Fisher were listened to with the greatest attention. After describing the chief peculiarities of the four Glucke tours, he dwelt very fully on the difference between the Bell Glucke and the Glucke Roll, and expressed his view that there was no mistaking the distinct metallic bell ring in the former. The Glucke Roll was brought quicker and with a roll. The Deep Glucke was given very slowly, and the slower it was given the more points it scored.

The old Seifert birds excelled in this Deep Glucke, and he regretted that such a very striking and beautiful tour should have been to a great extent lost. Although he had never known any one bird to possess the four Gluckes shown on the judging sheet, yet he had heard some that had three good, distinct Gluckes, viz., the Glucke Roll, the Water Glucke, and the Deep Hollow Glucke. The tour known as the "Triller Glucke" was not a recognised tour with us. It was of a high pitch, and, as the name suggested, was given with a trill.

The song of several birds brought to the meeting by members served most appropriately to illustrate the lecturer's remarks on the various tours. Arrangements are being made for a lecture to be given at our next meeting, June 26. Particulars will be announced later. Birds will again be brought, and their song explained. This will become a regular practice at our meetings, for it is realised that this is the best, if not the only, mehod of making members conversant with the Roller's song tours. Towards the end of the year judging competitions will be held, and thus an opportunity will be given to members to show what knowledge they have acquired by these monthly instructions, and, as a further encouragement to the novices, the President, Capt. Bloomfield, has generously promised to present a Novice Challenge Cup to the club.—R. Dugdill, hon. treas. and reporter.

Singing Contests.

Announcements of forthcoming contests in the nature of advertisements must be paid for at advertisement rates, two words a penny.

SHEFFIELD.

Linnet contest, Sportsman Hotel, Paternoster Row, June 3; 28 birds sang. 1, Jackson; 2, Parlett; 3, Bayston.—E. Phillipson Sec.

KIPPAX.

Members' sing, June 3; 32 birds entered, and there was only six seconds difference between the three winning birds. 1, Potter; 2, Collinson; 3, Plows. Timekeepers, J. Cooper, J. Wallis; tappers, W. Perkin, J. Liversidge.—R. Plows, Sec.

BLACKBURN.

Linnet contest, Empire Hotel, Bolton Road, May 26; 15 birds entered for five prizes: 1, 2, Beet; 3, Topping; 4, Brooks; 5, Statham. Members' contest for cup, June 9, commence 2.30; hoping all members will attend.—T. Hayhurst, Sec.—(Advt.)

LEIGH.

Linnet contest, King's Head, Market Place, June 2, for time and quality; 44 birds entered. Time: 1, Brooks, 108; 2, Bates, 66; 3, Murphy, 60; 4, Finoh, 56. Quality: 1, Statham; 2, 4, Ashley; 3, Jones. Judges, T. Statham, J. W. Jones; timers, W. Meadows, J. Murphy; minutes, J. Whittle.—R. Disley, Sec.

CASTLEFORD.

All matter intended for publication must be written or typed on **one side** of paper only, must be authenticated with the proper name and address of the sender, and must reach us not later than the first post on Tuesday if insertion in the next issue is desired.

"CAGE BIRDS" will be sent post free weekly, on the day of publication, at the prepaid rate of 10s. per annum for the United Kingdom, and 13s. annually for foreign countries.

Twitterings.

We hear that Mr. C. A. House has been appointed to judge the Maesteg Show, Nov. 21.

Mr. O. C. Smith, sec., writes that the annual show of the Reading C.B.S. has been fixed for Nov. 28 next.

Mr. T. Dixon has been elected to judge our Nest Feather Show on July 14, and Messrs. J. Riseboro and J. Hands our Annual Show, writes Mr. R. Ward, hon. sec., Chester-le-St. C.B.S. As we have got a few additional members, and the majority seem to be just getting the young birds hatched, we are looking forward to a decent turn-out at our Young Bird Show.

The Avicultural Magazine for June, the journal of the Avicultural Society, contains a most instructive and interesting article by Dr. Amsler, entitled, "An Avicultural Medley." Among the valuable hints given are the breeding of gentles as a food for insectivorous birds, to take the place of the now very expensive mealworm, the collection of hive ants' cocoons for the same purpose, and an ingenious device for the killing of mice by poisoned grain without risk to the birds in an aviary. The rest of the communication consists of a recital of the doings of the birds in Dr Amsler's aviaries during last year. Mr. Allen Silver, whose many friends will learn with satisfaction that he is doing as well as may be expected, considering the terrible experience which resulted in the loss of his right leg, contributes an interesting article, "Birds in London and Suburbs," and other articles are, "The Golden Crested Wren," by Dr. A. G. Butler; "Some Tasmanian Birds' Nests," by H. Stuart Dove; reprinted from "The Emu"; and "Birds of Queensland," by the London correspondent of the N. Queensland Register. The last-named appeared in CAGE BIRDS of March 31

I much regret to announce, writes Mr. W. D. Fryett, Hon. Sec., Crystal Palace and Penge C.B.S., that our worthy chairman, Mr. Foxen, will attend our next meeting for the last time previously to being called up. Mr. H. Norman will lecture on British Birds.

Ramsden's Pure Peppers; Final Consignment of thirty-one cases only safely landed. Owing to enormous increase in cost of freight, war risk insurance, canisters, &c., prices must advance for this season: Super quality only, ½ lb. 1s. 9d.; 1 lb., 3s.; 3 lb., 7s. 6d.; 5 lb., 12s. 6d.; 22 lb., 42s.; all post or carriage paid. No other sizes packed. Owing to absence from town and shortage of labour, none but small post orders will be executed during the first 14 days in July and September. First come, first served. When these 31 cases are sold I close until next season.—J. W. Ramsden, 11, Josephine Avenue, Brixton, London, S.W.—(Advt.).

An Important New Edition.

The many enquirers for the great standard work, "Our Canaries," will be pleased to hear that a new edition is to hand, and copies can be supplied by return post so long as they last. Full particulars were given on our back page last week, and are repeated in this issue. Those who have not seen this grand work should write for the illustrated booklet mentioned in the coupon, and if they send at the same time a P.O. for 1s. on account, a volume will be reserved for them.

"Thanks for 'Our Canaries,' received safely I am very delighted with it, and have already found it most useful. I hope, with its help, to have some luck in my first year of Breeding Canaries."—J. SMEATON (Brentwood.)

The June issue of "British Birds," Messrs. Witherby and Co., High Holborn, 1s., monthly, is the first of a new volume, Vol. 11. It includes a second list of Additions and Corrections to the "Hand list of British Birds," bringing this very valuable work, published in 1912, fully up to date, and a continuation of "The Moults of the British Passeres," by Mr. H. F. Witherby. Other articles are on the nesting of the Dotterel on the Yenesei, by Miss Maud D. Haviland, and in Scotland by the late Capt. C. S. Meares, and there are the usual interesting "Notes" and "Short Notes."

Notes by the Editor, Mr. Wesley Page, form the greater part of the May issue of "Bird Notes," the journal of the Foreign Bird Club. These are: "The Green Woodpecker," "The Orchard Finch," and "the Private Importation of Indian Birds," the last being supplemented by a long and interesting extract on the Indian Bank Mynah from Mr. Douglas Dewar's "Glimpses of Indian Birds." Other articles are "The Blackbird that Blighted my Life," by B. T. Stewart; "My Aviary Room and its Occupants," by Mrs. M. A. Burgess; "The Story of Jobo," a Senegal Parrot, by Miss E. Maud Knobel; and "Birds of British Guiana," by C. Dawson.

A Ramble for Liverpool Fanciers.

The members of the N. Liverpool C.B.S., writes Mr. H. Holden, hon. sec., will hold their ramble with Garston C.B.S. as scheduled on June 10, through Oglet and district. Liverpool members and friends meet at Royal St. (Everton Valley) at 10 a.m., or at Garston tram terminus at 11. Tea at Oglet as last year; friends are cordially invited.

Seasonable Hints on Useful Weeds.

By RICHARD MORSE, F.R.H.S.

A weekly feature which will be found of the highest value to all who keep seed-eating birds, and of interest also to all who appreciate the beauty and usefulness of the flowers of our waysides and meadows. The first of the series appeared in our issue dated March 17.

THE present spring has indeed been a most remarkable one. After a life spent almost entirely in the country, and a continual acquaintance with Nature and her ways, I never before remember such rapid transformation scenes in the countryside. Not many weeks since, I was bewailing the unusual lateness of the season, and watching anxiously for the awakening of the springtide herbs, but the growth has of late been so rapid that it is almost impossible to keep pace with it, and before one can hardly realise the fact we are plunged almost directly into the height of summer.

A week or two ago I noticed in my ramblings abroad some fields of clover and such-like crops which seemed to promise a good harvest of weeds in the near future, for it was easy to recognise amongst the growing crops a quantity of vegetable "trespassers" of many kinds, and, making a note of the locality, I determined to re-visit it a little later on. Two days ago I carried out my intention, and long before reaching the spot my eye was arrested by vast sheets of white, covering several acres of ground, leaving no doubts in my mind that the white campion had rushed post haste into blossom.

A Fragrant Weed

Although apparently not used to any large extent by bird-keepers, this campion (Lychnis alba Mill) is really a plant worth notice, for it is a large and easily recognised weed, and produces a great quantity of valuable seed which is readily devoured by Linnets, Bullfinches, Greenfinches, Siskins, Canaries, etc. It delights to grow in such habitats as those above mentioned, and, provided one does no damage to the cultivated crops, the farmer is, of course, glad to have his land freed from the pest. It also grows plentifully in hedge-rows, waysides, and cornfields.

A portion of the mature plant is shown in the accompanying sketch at A, which illustrates the opposite pairs of pointed leaves, an open flower, and a mature seed-pod, the latter opening by teeth at the summit to liberate the seeds.

Sexes in Campions

A very similar plant to this is the red campion (Lychnis dioica L.), which differs principally in having red or bright rose flowers instead of white ones, and in remaining open all day, whilst the white variety scarcely ever opens except in the evening, when its flowers are beautifully fragrant.

Both the white and the red campions are remarkable amongst our wild flowers in that they produce both male and female plants, and if you go collecting their seeds you will soon learn to distinguish at a glance the one sex from the other, for from our point of view it is, of course, only the female plants that are of any use, as the flowers of the other sex are, naturally, followed by no seed-pods whatever.

Campion seeds will not, of course, be ripe for some little time to come, although one must always guard against postponing collection too long, for the seeds are very easily lost when once the capsules open. These latter should be shaken into a bag immediately they are picked, and in this way a large quantity of the brownish seeds may be gathered in quite a short time, which, after suitable drying, may be safely stored for future use.

A, White Campion. B, Cold of Pleasure.

The other weed shown in the sketch (B) is not really a native plant at all, but, under its popular name of gold of pleasure (Camelina sativa Cr.), is well known to most of us as a valuable food-plant for birds, though it is, of course, very useful in many other ways.

Gold of pleasure is not at all a common plant in a wild state, though one may occasionally find small colonies of it in fields and waste places as an escape from cultivation. It commonly reaches a height of about two feet, and bears at this season a number of small yellow flowers, which are quickly followed by the well-known pods shown in the sketch. Up to the present I have not this year been able to find a single specimen of this plant, though I have reason to believe that in some districts it is common.

The seeds of this plant contain a high percentage of oily matter, and so are inclined, if not used with care, to cause digestive disturbances, but if judiciously employed they are of the greatest value, and are by many fanciers held in higher esteem even than shepherd's purse.

Readers are invited to send any botanical specimens which they have difficulty in identifying. The whole plant, including fruits, should be sent whenever possible. Packages should be addressed "The Editor," CAGE BIRDS, 154, Fleet Street, London, E.C.4, and must be accompanied by a P.O. for sixpence. Answers will appear in this column.

A Lonely Soldier Fancier.

If there are any cage bird fanciers in any of the camps round Catterick or Richmond, writes Mr. G. H. Stubbs, of Stubbs Bros., Cheltenham, I should like them to communicate with me, as I should be pleased to meet them. My address is 136082, Gunner Stubbs, G. H., R.G.A., No. 46, A.S.C. Lines, A Siege Depot, Hipswell Camp, Catterick, Yorkshire.

The Patronage of Specialist Clubs.

Secretaries of societies desiring the patronage of the Cinnamon-marked Y.C.C. should apply at once to Mr. R. Garnet, 104a, Leeds Road, Windhill, Shipley; of the Open Norwich Plainhead Club to S. Wilcock, 16, Back Manor St., Eccleshill, Bradford; and of the the National British Bird and Mule Club to E. Stephens, "Torrington," Devonshire Rd., Palmer's reen, London, N. Names of judges and the classification should be forwarded with the applications.

A Golden Oriole in Cornwall.

My colleague "H. M. S.," says "T. A. C.," in the "Manchester Guardian," has had one of those treats which fall to the lot of but few of us—a good view of a male Golden Oriole, one of the most brilliant of the rare birds which visit our islands from time to time. She was sitting at the edge of a Cornish cliff with a friend when the bird passed below, and at once its orange and black plumage caught her attention. The description she sends could apply to no other bird. The Golden Oriole might be a regular summer visitor to England, especially to the southern and western counties, but it is seldom allowed a chance to nest. How pleasant it is to record the bird's presence without the words "shot," "trapped," or "killed."

Birds' Nesting as it Should Be.

Within the last five years writes R. H. Mallinson, in "Country Life," one is glad to notice that birds'-nesters in general are leaning towards a study of the eggs and young rather than towards a collection of dry shells. The collecting of these shells, though a very exciting business, maybe, is not, after all, a very scientific hobby, and the admirably illustrated books now upon the market are inducing birds'-nesters to make collections of photographs rather than of dry shells, which tell so short a story of the life of a bird. The photographing of birds' nests, eggs and young ones is not an easy matter, and for that reason alone is to be strongly commended as a hobby for boys. Schoolmasters who offer small prizes to their pupils are surprised at the results obtained by some of the more intelligent and scientific scholars.

A DISPUTED POINT SETTLED.

The following paragraph, taken from the June issue of "British Birds," finally dispels any doubt that may have existed as to the bona-fides of the claim of Mr. Anderson, of Darvel, that he had produced hybrids between a male Song Thrush and a female Blackbird. The hybrid examined by Mr. Witherby was one of the second year's lot, and was the one which, while living, had been accepted as genuine by the committee of the National British Bird and Mule Club.

For ourselves, we never had the slightest doubt as to the parentage of the three hybrids reared by Mr. Anderson in the previous summer from the same two birds, and have never hesitated to say so, although there were some who could not see the Blackbird in their parentage, and were equally certain that they were Song Thrushes pure and simple.

HYBRID SONG THRUSH AND BLACKBIRD.—Mr. G. Crabb recently kindly showed me a male example of a hybrid between these two species bred in captivity. The upper-parts were darker than those in a Song Thrush, but browner than in a male Blackbird, while the under-parts were much like those of a Song Thrush, but the spots on the breast were smaller and not so rounded, and the belly was cream-coloured rather than white and the under tail-coverts and axillaries darker and richer than in the Song Thrush. The median wing-coverts had no golden-buff tips as in the Song Thrush. The length of the wing was equal to that of the Blackbird, measuring 123 mm., as against 111-121 in males of Song Thrush and 120-132 in males of Blackbird. The tail measured 92 mm., which is longer than a Thrush's and short for a Blackbird. The sixth primary, was not emarginated as it is in the Blackbird, and thus resembled the Song Thrush. The wing-formula, however, was more like that of the Blackbird, this being especially noticeable in the sixth primary which was 7 mm. shorter than the longest primary, whereas in the Song Thrush it is 12-18 mm. shorter.

H. F. WITHERBY.

The Intelligence of Pet Birds.

The Baya Weaver Bird.

The following interesting account of the Baya Weaver is taken from the "Indiaman," and at the end is added an account of its meeting as given in Mr. Douglas Dewar's delightful work, "A Bird Calendar for Northern India," which book was reviewed some months ago in our columns.

THE common Weaver-bird, the Baya, "Ploceus baya," is an inconspicuous little brown bird, not altogether like, but not very unlike, a hen Sparrow. But in the hot weather, when the breeding season is about to commence, the cock breaks out into golden tints like a gorse bush which blossoms in yellow flowers. At that time he, at any rate, is easily recognised; and, even if we have not noticed the birds particularly, we all know the strange, penduline, retort-shaped nests, in use or disuse, hanging from the kikar trees. The "Ploceidæ" are very skilful architects, their operations are worth watching, and if we care to watch them, now is the time.

The Baya's Beautiful Nest.

Beauty, it is said, is appreciation of purpose, and purpose rightly used. The nests are therefore beautiful, for there could hardly be a better expression for their constructive necessities. The structures, hanging like long-necked flagons from slender branches of the trees, are built of threads of grass, lined with soft material within.

The threads are manufactured by stripping the blades of the elephant grass into strands of the desired thickness, and are then woven into shape, beginning from the tree-attachment and working downwards. The only opening is a narrow neck at the lower end, and the inmates of the nest are thus secure from the attacks of squirrels, monkeys, and birds of prey.

The skill displayed in the construction of these little homes, with all the devices for comfort within and protection without, is very remarkable. Instinct comes, of course, into play, but it is not all instinct. It is partly the outcome of intelligence and experience.

In any colony of cradles, a certain number of unfinished nests will be observed. The natives say that these are summer-houses, built in order that the cock may sit and sing to his mate to relieve the tedium of incubation. It is a pretty legend, but it is much more likely that these incomplete constructions are the work of young birds learning the business.

Most nests, again, have pellets of clay attached to them, and it is an Oriental conceit that fire-flies are stuck into the clay to light the nests at night. This is still more of a fable, and it is probable that the clay is used to balance the nests and prevent them swaying dangerously in a high wind. It is safe, however, to assume that the weights have a use, and the use implies a certain amount of reasoning power.

But no one can watch the Weaver-birds at work without noticing, in addition to their intelligence, their joyous enthusiasm. You see them in the sunshine after rain, flashing with vitality, bubbling with song and laughter, bestowing on artist's work an artist's labour, a perfect riot of happiness. "I look on that man as happy," said Emerson, "who, when there is a question of success, looks into his work for a reply, not into the market, not into opinion, not into patronage." In a wild state, the Bayas are like that, and if they are secure of their own verdict, they ask for nothing else.

A Clever Performer.

It is only when they come into contact with man that the love of approbation is aroused. The Bayas are sagacious in other ways than in the construction of their tree-rocked cradles, and for that reason they always form a part of the stock-in-trade of the "tamasha-wallahs" exhibiting performing birds.

Most of us will have seen them hauling miniature buckets out of miniature wells, threading beads with a needle and thread, and retrieving small articles thrown into the air. The Indian trainer is not a great expert, or the Baya would go much further than that. It has all the qualifications of the performing bird, it is readily trained, capable of great attachment, very intelligent, and almost eager to be taught.

The birds are so delightful to watch in their natural state that I had no particular desire to own a tame Baya. But one day in the bazaar of a great city I found a young Weaver-bird exposed for sale with a number of bullet-headed Green Parrots and Red Munias, and I carried him home with me. I would have given him his liberty, but it was early in September, and he was barely fledged; and later with almost unrestricted liberty he never wanted to go. When he was caged it was solely for his own protection. He was usually loose, and would follow me into the open air with no other thoughts than to follow.

That he was very clever goes without saying. A young Baya is just the sort of young fellow a crammer likes to coach for an examination. But cleverness is not the only point; the Crow is very clever, but no Crow would pass any examination at all. As an examinee he would be annoying his neighbours, spilling the ink, and writing ribald remarks on the folly of the questions and the incapacity of the examiners. The Weaver-bird is a born competition-wallah with a thirst for marks at an examination, and what marks represent. And when all that is said, the Baya, as a companion, has another and a more excellent gift.

Cunningham, in his charming work, says that Bayas are very undesirable additions to an aviary, as they are very aggressive, and are possessed by a deeply-rooted desire to hammer in the skulls of their neighbours. That may be a grave objection to the Baya for aviaries, but it is that very aggressiveness which makes it so valuable as a house pet.

Rough on the Sparrow.

Everyone knows the extreme annoyance caused by Sparrows in the interiors of our Indian houses. The Sparrow is recognised as a pest, but it is worse than a pest, it is an abominable nuisance, and a source of profanity. When once it enters it has to be ejected, but the ejectment is a troublesome campaign. It means the employment of bamboos and driving whips, tennis-balls, and other missiles, and it ends in a disordered room, bad temper, and a subsequent sense of shame.

A tame Baya, and all that disappears. You can sit coolly in your chair, and the Baya does the rest. The Sparrow enters through the top window with its usual impertinent and exasperating chirrup; and the Baya, always jealous and alert, looks up with a "Who goes there?"

"Sparrow."

But it is no case of "Pass, Sparrow, and all's well," it is "you clear out, Sparrow, double-quick, or I'll knock your head off."

The Sparrow does not mind that. It is accustomed to bad language, and its business in life is to incite Billingsgate. But opposed to a Baya, it very soon finds a hasty retirement prudent; and then my little friend used to flutter down right on to my blotting-pad, and ask for praise. He got it.

An Extract from "A Bird Calendar for Northern India."

By DOUGLAS DEWAR

Of the scenes characteristic of the rains in India none is more pleasing than that presented by a colony of nest-building Bayas or Weaver Birds (Ploceus baya). These birds build in company. Sometimes more than twenty of their wonderful retort-like nests are to be seen in one tree. This means that more than forty birds are at work, and, as each of these indulges in much cheerful twittering, the tree in question presents an animated scene. Both sexes take part in nest-construction.

Having selected the branch of a tree from which the nest will hang, the birds proceed to collect material. Each completed nest contains many yards of fibre not much thicker than stout thread. Such material is not found in quantity in nature. The Bayas have, therefore, to manufacture it. This is easily done.

The building Weaver Bird betakes itself to a clump of elephant grass, and, perching on one of the blades, makes a notch in another near the base. Then, grasping with its beak the edge of this blade above the notch, the Baya flies away, and thus strips off a narrow strand.

Sometimes the strand adheres to the main part of the blade at the tip so firmly that the force of the flying Baya is not sufficient to sever it. The bird then swings for a few seconds in mid-air, suspended by the strip of leaf. Not in the least daunted, the Baya makes a fresh effort and flies off, still gripping the strand firmly. At the third, if not at the second attempt, the thin strip is completely severed.

Having secured its prize, the Weaver Bird proceeds to tear off one or two more strands, and then flies with these in its bill to the nesting site, uttering cries of delight. The fibres obtained in this manner are bound round the branch from which the nest will hang. More strands are added to form a stalk; when this has attained a length of several inches it is gradually expanded in the form of an umbrella or bell.

The next step is to weave a band of grass across the mouth of the bell. In this condition the nest is often left unfinished. Indians call such incomplete nests jhulas or swings; they assert that these are made in order that the cocks may sit in them and sing to their mates while these are incubating the eggs. It may be as "Eha" suggests, that at this stage the birds are dissatisfied with the balance of the nest, and for this reason leave it.

If the nest, at this point of its construction, please the Weaver Birds, they proceed to finish it by closing up the bell at one side of the cross-band to form a receptacle for the eggs, and prolonging the other half of the bell into a long tunnel or neck. This neck forms the entrance to the nest; towards its extremity it becomes very flimsy, so that it affords no foothold to an enemy.

Nearly every Baya's nest contains some lumps of clay attached to it. Jerdon was of the opinion that the function of these is to balance the nest properly. Indians state that the bird sticks fireflies into the lumps of clay to light up the nest at night. This story has found its way into some ornithological text-books. There is no truth in it. The present writer is inclined to think that the object of these lumps of clay is to prevent the light loofah-like nest swinging too violently in a gale of wind.

After the formation of the cross-bar at the mouth of the bell one of the birds sits inside and the other outside, and they pass the strands to each other, and thus the weaving proceeds rapidly. While working at the nest the Bayas, more especially the cocks, are in a most excited state. They sing, scream, flap their wings, and snap the bill. Sometimes one cock in his excitement attacks a neighbour by jumping on his back. This results in a fight, in which the birds flutter in the air, pecking at one another. Often the combatants "close" for a few seconds, but neither bird seems to get hurt in these little contests.

The Essentials of Aviculture.

By J. W. N.

(Continued from page 185.)

A Series of comprehensive articles, embracing the proper management of all kinds of birds in captivity, their housing, feeding, general management and diseases, and the breeding of species, Mules and Hybrids. In this concluding portion the author gives in tabulated form short instructions for the proper keeping and feeding of birds in captivity.

Some More British Birds.

And How to Keep Them.

CROW.—A very easy bird to keep in captivity. Is much better running about with one wing clipped than confined to a cage. In this manner he will provide himself with all the insects necessary. As he is of a mischievous disposition he should be kept away from cultivated ground. *Food*: Large Softbill mixture, or soaked dog biscuits mixed with mashed potatoes or scraped raw carrot; Melox soaked overnight is another useful food. *Extras*: Tablescraps; all sorts of insects, fruits, and berries.

FIELDFARE.—*Food*: Large Softbill mixture. *Extras*: Insects of all kinds. Berries are greedily eaten, especially those of Mountain Ash. Fruit, in particular the apple, will usually be taken.

GOLDFINCH.—One of the most popular of British Finches in captivity. Invaluable for mule and hybrid breeding. *Food*: British Finch mixture. *Extras*: British Finch tit-bits, and a few cracked sunflower seeds. A constant supply of seeding thistle heads should be kept up if possible, and then the bird will eat little else. Small insects occasionally. The heads of burdock and plantain when procurable will afford a pleasant change, and even flowering grasses are eaten occasionally.

GREENFINCH.—Do not overfeed this bird, as he quickly gets fat and ungainly. *Food*: British Finch mixture. In summer, if he is too fat, allow only canary and rape in equal parts. *Extras*: Insects, fruit and berries are all eaten, and an occasional treat of a few sunflower seeds will improve the plumage.

HAWFINCH.—A very shy bird, although large in size. Give a large, roomy cage. *Food*: Although the British Finch mixture will do, it is better to add hemp and sunflower and to diminish the quantity of canary and rape. *Extras*: Finch tit-bits; insects occasionally; berries and fruits, the stones of which get their due share of attention. Beech nuts in the autumn are of great use in giving variety.

HAWKS.—Of various kinds, are not favourites as cage birds; they are carniverous, and require the bodies of small animals, preferably newly killed and still warm. Sparrows and mice are the usual animals employed, but the former must have the large flight and tail feathers removed. The larger insects ought to be supplied when procurable.

JACKDAW.—See Crow.

JAY.—Prized for his plumage and power of mimicking sounds; he makes a splendid pet. *Food*: Large Softbill mixture, with changes such as advised for the Crow. *Extras*: Fruits and berries; insects and an occasional mouse are all disposed of; eggs, peas, beans, chestnuts, nuts, and acorns afford a means of supplementing the mouse.

KINGFISHER.—Not suitable for cage life, but in an aviary built over a stream their beautiful plumage and graceful flight and quaint mannerisms will provide endless interest. *Food* mainly consists of fish, so see that the stream is well stocked with minnows and sticklebacks; frogs and small lizards are favourite variations, and a few shrimps make a tasty tit-bit.

LINNET.—Specially prized for his power of song. *Food*: British Finch mixture. *Extras*: British tit-bits; dandelion and thistle-heads with bunches of wild grasses are his favourites.

MAGPIE.—Like the Jay, has wonderful powers of mimicry; is very mischievous, and all feeding utensils must be outside cage. *Food*: Large Softbill mixture, soaked Melox, etc. *Extras*: Table scraps, beetles, mice, frogs, sparrows, the latter three only to be given occasionally.

MISSEL THRUSH.—See Song Thrush.

NIGHTINGALE.—The best of all British song birds. *Food*: Small Softbill mixture. *Extras*: Mealworms and other forms of insect food, a little crushed hemp seed can be added to the stock mixture. Berries, such as raspberries, are sometimes eaten.

OWL.—Difficult to keep in good health owing to the carnivorous nature of the food. All the items mentioned for Hawks are used, and pieces of liver are liked.

PIPITS OR TITLARKS.—Make difficult cage birds. They must have plenty of exercise, so a large cage is indicated. *Food*: Small Softbill mixture. *Extras*: Bunches of seeding grasses; insects and berries.

RAVEN.—Same as Magpie.

REDPOLL.—Their quaint mannerisms make them great favourites, so give roomy cages. *Food*: British Finch mixture. *Extras*: Tit-bits; heads of plantain and charlock.

REDSTART.—*Food*: Small Softbill mixture. *Extras*: Insects, fruits and berries.

REDWING.—See Fieldfare.

RINGOUSEL.—Use a Blackbird's cage and feed in the same way as for that bird.

ROBIN.—*Food*: Small Softbill mixture. *Extras*: Fruit and berries, mealworms and other small insects. A few grains of canary seed are sometimes eaten, and make a change.

ROOK.—See Crow.

SISKIN.—A great favourite amongst British bird fanciers. *Food*: British Finch mixture. *Extras*: British Finch tit-bits, and all kinds of wild seeds and berries.

SKYLARK.—Is very hardy, and this combined with its power of song make it much sought after as a cage bird. *Food*: Large Softbill mixture. *Extras*: Insects and seeding grasses.

(To be concluded.)

"PIGEONS"
The only paper dealing solely with Show, Table and High-flying Pigeons.
Coloured Plates a Special Feature.
Every Friday 2d. Send P.C. for specimen.

"FUR & FEATHER"
The Rabbit, Cat and Cavy Paper.
The only Paper devoted to these subjects.
Every Friday 1d. Send Postcard for Specimen.

Offices: Idle, Bradford, York

Correspondence.

EVERY WEEK A PRIZE OF TEN SHILLINGS IS GIVEN FOR WHAT, IN THE OPINION OF THE EDITOR OF "CAGE BIRDS," IS THE BEST LETTER PUBLISHED UNDER THIS HEADING. THE LETTER MAY BE ON ANY SUBJECT. IT MAY BE A COMMENT, FOR OR AGAINST, ON ANYTHING WHICH IS PUBLISHED IN OUR PAGES, AN OPINION ON THE POLICY OF OUR PAPER, OR MAY HAVE NO REFERENCE WHATEVER TO ANYTHING WHICH HAS ALREADY APPEARED. SO LONG AS IT IS ON A "BIRDY" SUBJECT, AND IS ORIGINAL, IT WILL BE ELIGIBLE TO COMPETE FOR THE PRIZE.

The Prize this week is awarded to Mr. T. J McMillan, 55, Vernon Street, Belfast.

Wasp Grubs as Bird Food.

How May They be Gathered and Preserved?

SIR,—I should be obliged if some reader of CAGE BIRDS would be kind enough to tell us the best methods to (1) capture wasp nests in ground; that is, kill wasps without damaging nest and grubs; (2) capture wasp nests hanging from trees, etc.; (3) preserve comb for the winter use. Now that live food is so expensive I think the information would be most valuable—certainly to me, and I am sure to many others. GEO. E. LOW.

Is Maw Seed Restricted?

Plantain as a Substitute.

SIR,—As I am a breeder of Canaries, and as maw seed is the seed which all bird fanciers use during the breeding season to their egg food, I should like to know if any other fancier has been refused maw seed. My wife, a few days ago, went into a large seed merchant's shop in the Midlands to purchase some maw seed, but the salesman, to her astonishment, said he was not allowed to sell this seed, it comes from foreign countries. We all know that most of our seeds come from foreign countries, so why is this one especially restricted? In place of maw seed now I use plantain seed which I gathered last autumn.

G. BALL.

Is Tredegar C.B.S. Dead?

A Protest Against a Suggestion.

SIR,—It is not my intention to reply to the letter written by the secretary, Mr. W. B. Watkins, until he unreservedly withdraws his statement that "I never thought my friend, Mr. G. O. Thomas, would allow himself to be a tool in other people's hands." This is an open statement, and evidently he is suspicious of some one who is innocent, and it is for the sake of the person or persons whom he suspects that I have adopted this attitude. If he does not withdraw, the matter will be put into other hands, and will have to take its course. I should never stoop so low as to sign my name to other people's letters, and I say openly the letters are my own, and written by

G. O. THOMAS.

The Trouble of the Sweating Hen.

SIR,—I read with great interest Mr. Allsopp's article on the sweating hen, and have no hesitation in agreeing with him that feeding has nothing whatever to do with it. I may say that my birds are fed very plainly indeed, without any kind of rich food. I do not start giving them egg food until they have their first egg, and then only twice a week until the eggs are hatched, and then, of course, they get it as often as I think they require it. I also feed on groundsel and lettuce, giving them these two greens in preference to all others. I think no birds are fed much more plainly than mine, yet I have had sweating hens. I have bred many birds in other seasons, but I am sorry to say that this season has not been quite so good. As for feeding being the cause of sweating I fail to see it, for although as mentioned above my birds are kept very plainly, yet I have been a victim. H. KAY.

IN-BREEDING:

WHAT IT IS, AND WHAT IT DOES.

A Treatise of the Greatest Interest to all Breeders of Live Stock.

BY

C. A. HOUSE.

Price tenpence, post free, from The Manager, CAGE BIRDS, 154, Fleet Street, London, E.C. 4.

Hand-reared Skylarks.

A Query as to Feeding.

SIR,—Would any reader of CAGE BIRDS kindly tell me what food to give Larks when they are about six weeks old, as I find when I hand-rear them they always die at about that age, even if they are picking.

T. HOOK.

Improving the Norwich Canary.

A Novice Seeks Information.

SIR,—I have read all the correspondence in CAGE BIRDS on the Norwich Plainheads. Mr. Johnson says the Norwich has been improved during the last few years; will he kindly let us know through CAGE BIRDS how it has been done, as they tell me mine are all too small for the show bench, too old-fashioned? I have been trying to breed them like the beautiful drawings of Mr. Norman's on the front of CAGE BIRDS, for five years, and then to be told that they are of no use is very disappointing to me. If he will tell me how to do it I shall be very much obliged.

INTERESTED NOVICE.

On Making a Start.

Honesty or Fitness?

SIR,—It is gratifying that Mr. Martin does not doubt the honesty of myself and other fanciers. In his lecture he said "Trust no one," now he is wobbling, and states he said "many" not "everybody," and he may tell us in a few days that he used neither statement. I say again that there are plenty of reliable and honest fanciers, and I am not quoting from books, or theory, but from practical experience. The "dozens that have been driven out of the fancy by taking such advice as 'Lover' gives" we have only Mr. M.'s word for. If the dozens had taken the valuable spoon-feed from our friend Mr. Martin, no doubt they would have been in the fancy to-day, and successful.

With regard to my fitness Mr. M. knows nothing of me, and why he made that statement I cannot imagine; I have never offered my services to buy a feather for him or any one else; when I do, then will be the time for him to comment on my fitness.

With regard to "A. Sticker," a man who makes use of such statements through your columns and has not the conscience to give his name and district, is not worth ink and paper. Fancy expecting a breeder to part with a pair of brids likely to breed a "Dreadnought." I wonder how many "Dreadnoughts" have been bred during the last ten years. A. HUTTON.

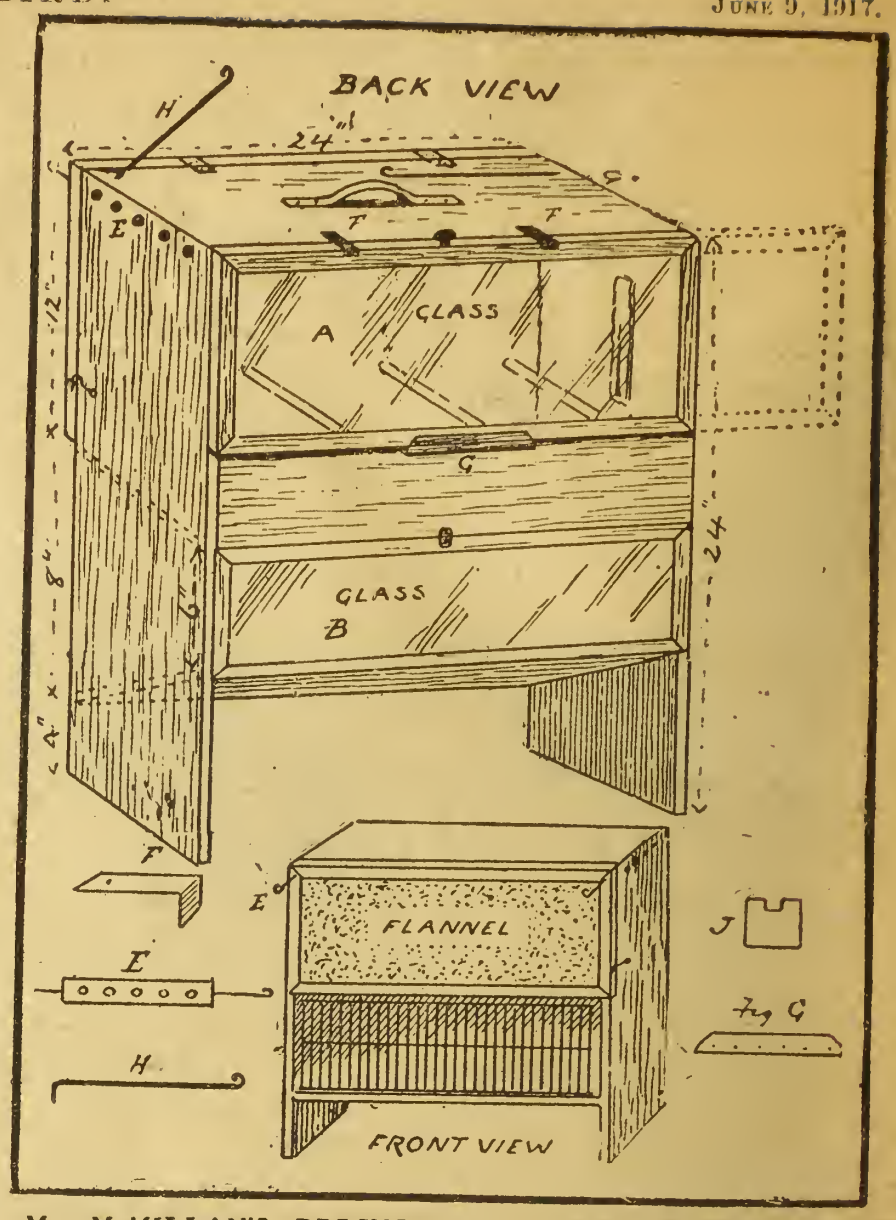
Non-sitting Hens.

How to Deal with Their Eggs.

SIR,—Having read in June 2 issue of CAGE BIRDS, the letter "A Novice's Experience in Breeding Canaries," which somewhat amused me, though I was glad to read of his ultimate success, I should like to give my experience of first round this season which may be a little service to many a novice, as I have been a breeder for a great many years. My first round, nine hens, brought me a total of 21 young ones, all on to hard seed.

On starting this season three of my hens were new to me, and of course I did not know their probable defects. However these three new comers each produced four grand eggs. Of course, all the nine hens I had were laying at about one and the same time. Now I had prepared myself ahead to catch these three new hens napping, and as it turned out they would not go on sitting their eggs, absolutely giving the sitting duty a complete miss, so I took the whole of the 12 eggs, and divided them among the other six hens. This rather overburdened them, yet it is as well I did so, otherwise I should not have had my grand total of 21 young birds. I shall give the same three lazy hens another trial, of course, but I shall prepare myself in fair time, to be ready to wink my other eye if they do it on me again next round. In conclusion I hope also our friend, "Novice" has a real good success in his second venture. Nil desperandum.

JOHN H. JOWETT.



Mr. McMILLAN'S DRYING CAGE. SEE LETTER BELOW.

A Home-made Drying Cage.

Full Particulars of Construction.

SIR,—I send you herewith sketch and particulars of a drying cage for use in front of the fire, in the hope that it may be of interest and benefit to other fanciers. I used a similar cage last show season, and it proved most satisfactory.

The material required to construct the cage is as follows:—Ordinary spruce, four pieces, 24in. x 9in. x ⅝in., one piece 24in. x 10in. x ⅝in.; two pieces 7in. x 2in. x ¼in. (for ventilator); one piece 24in. x 4in. x ⅝in.; yellow pine, 6ft. 6in. of 1in. x ⅝in., and 12ft of 1in. x ⅝in., ploughed ¼in. deep on top to suit glass (Fig. J).

Fittings, two pairs 2in. light narrow steel butts, two gib pieces, made from ⅜in. x ⅛in. iron (Fig. F), one lifting handle, one black turn button, two hooks and eyes, two pieces hoop iron 8in. x 1in. drilled (Fig. G), and the necessary glass. (In providing the glass it should be cut ⅛in. smaller to allow for contraction and expansion.) One piece of grey flannel 24in. by ⅝in. The flannel used for military shirts is very suitable, and keeps clean better than any other colour.

The method of construction is as follows:—Nail one of the 24in. x 9in. pieces on top of two others to form top and sides, taking care to drive the nails where they will not interfere with the ventilating holes when bored. Next place the bottom of the top compartment (A) in position and nail firmly in place.

Now proceed with bottom of compartment (B), sloping it toward the side which will face fire when the cage is in use. Use for this the 10in. wide piece of spruce, and when fixed in position clean off the projecting pieces which will have resulted. Nail on the bottom rail (24in. x 4in.) in compartment A. Then proceed with the two glass panels, the upper one measuring 24in. x 8⅝in., and the lower one 24in. x 6⅝in. over all, using the ploughed pine (Fig. J).

The flannel screen comes next; it should measure 24in. x 13¼in. over all. (It will be noted this door is fitted outside. At the first glance it would seem better flush, but the wood part would to a certain extent prevent the heat getting at bird sitting on bottom of cage.

Nail the frame temporarily to a firm board, and proceed by tacking the flannel on same. Unless the frame is secured the flannel cannot be properly stretched. Cut a small groove, ⅛in. x ⅛in., 1in. from the top of each side of this screw to allow the rods of ventilators to project (Fig. E).

Bore five ⅛in. holes at top of each side of cage to act as ventilators, and five similar holes in exactly the same position in the two pieces, 7in. x 2in. x ¼in. Drive carefully 3in. of galvanised wire 1½in. into one end of same, and another piece 5in. long with loop 1½in. into other end to act as a handle for adjustment (Fig. E). Fit the two ventilating slips in position inside cage, using two small staples, and allowing the slip to cover and uncover holes in side of cage, cranking the loop handle so that it may project towards the front between flannel screen and side of cage through the holes already provided.

Now let us come back to the glass panels, screw the two guide runners (Fig. G) in position on bottom rail of top panel; screw knob into centre of top rail; fix panel in position by means of the two iron gibs, Fig. F, which should be 6in. from each end. This will allow the sliding panel to be opened for six inches at either side of top compartment, to allow for placing in or taking birds out, and also to assist birds to the perches when necessary.

The panel of the "mummy" compartment is best hinged at bottom, being secured by the black button. Fix the wire front in this same compartment in the front toward fire. I prefer to use this wire front, as a bird sometimes get free of the cloth with disastrous results. Hinge flannel screen at front and provide hooks and eyes for securing.

Now fit three perches 6in. apart, in top compartment, fix in thermometer, screw on top handle and fix the rails for drying flannels, etc. (Fig. H), into two holes, and the contrivance is ready for action.

My method of using is as follows:—Strew the top compartment with sawdust ½in. deep, spread a flannel, size of bottom, over the sawdust, place in front of a bright fire until a steady temperature of 80 degrees is attained, and proceed.

The making of this cage will provide only a few nights' work, and will be complete for First Feather shows. It can be made more simple by using only glass (without frames) and nailing flannel without frame and netting wire towards fire, but the extra trouble and expense in making it correctly will amply repay any fancier who "makes a job of it."

T. J. MCMILLAN.

(Correspondence continued on next page.)

CORRESPONDENCE.

(Continued from page 308.)

Birds to and from Shows.

The Return Carriage Question.

Sir,—Experience teaches. Two shows have been held since the new rule came into force. Ossett was the first, and there was a little confusion, because no definite arrangement had been made. Some exhibitors sent the return carriage with their entry fees and some did not. At Lincoln Show, at the end of April, there was no trouble at all. Mr. Fenwick, the secretary, asked exhibitors to send the return carriage with their entry fees, and this was the result. Mr. Fenwick said: "To be candid it was a real success, and I am sure that when we have had a few shows exhibitors will fall into line, and it will be no trouble to the secretary."

Your correspondent speaks of the trouble of weighing the crates at the station from which they are returned. This has always been the practice. Parcels, whether "paid" or "carriage forward," are always weighed at the forwarding station, and the charges made there, and not at the receiving station, as W. R. S. seems to think.

If fanciers all do their bit there need be no trouble about the return carriage, as the railway authorities will supply the show secretaries with sheets so that they may enter up all the names and addresses, and the railway clerks will weigh the cases, stamp them, and collect the charges from the show secretaries.

C. A. House.

A Perfect Travelling Box.

Some Hints on Sending Birds.

Sir,—I would like to tell readers how to make a perfect travelling box for sending live birds by rail. I might say that, having received a lot of birds at different times from various advertisers, I have been sometimes struck with the condition in which they reached me. In most cases plenty of seed had been put in the cage or travelling box, but, after being tossed about by the railway people, in nearly every case the seed was found in the paper wrapper on arrival, being wasted, as the birds could not get at it.

After thinking the matter over for a time, I think I may claim to have made a perfect travelling box which provides sufficient air for the birds and entirely prevents the seed from coming out.

A light wood box about 3½in. high, 11in. long, and 8in. wide is necessary, with no cracks, and with a close fitting lid. In the centre of each end of the box, bore a hole 1½in. in diameter, with a brace and bit; then get some perforated zinc or tin, cut off a size sufficient to reach about a quarter of an inch beyond the hole all round (a square piece is best) and nail at each corner with small tacks on the inside of box. Do the other end in the same way.

Then put an oval perch across the middle of the box about half an inch from the bottom, and put a tack through each side to hold in position. Split two inches off one side of lid, (by this means you have a narrow opening through which to put your bird, and there is not the risk of bird escaping or injuring its feathers), nail the other six inches of lid on the box with strong nails, I find ¾in. boot rivets are good, and it is ready for the bird. This size is sufficient for two or three small birds.

If the birds which I am sending off are British I get some chickweed and soak it in water for ten minutes, also a small cube of bread soaked; these are put in the box with a good supply of seed. I treat Canaries the same, and for foreign birds I put soaked seeding grass, with a small piece of bread. This provides them with enough moisture during a long, hot journey.

If I am sending birds off at night, and that is the best time, I always water and feed again at mid-day in addition to their morning feed. On receipt the birds should be placed in a cool room with fresh water and seed like that in the box, and then left alone for an hour to recover from the effects of the journey.

Send your customer a card two days before sending the birds, telling him the necessary seeds and time of dispatch, and ask him, if possible, to get them from his station with all speed. Finally, an hour or so before sending off, put a "live bird label" on the box; they are very cheap at the office of Cage Birds. If you do this, it will dry on the box and not be so liable to be torn off.

If these little details are followed it will make a great difference to the condition of a bird when received by purchaser. I have sent birds over 300 miles in these boxes, and they have arrived in perfect condition, so I hope my fellow fanciers will give this plan a trial.

H. Hood.

Non-feeding and Sweating Hens.

How a Bad Case was Cured.

Sir,—I had one particular hen which was a very poor feeder, and also sweated the young birds very badly. With this hen I lost four young birds in the first nest through nonfeeding and sweating. I gave the hen a couple of doses of Epsom salts, and also salt-water baths, which took no effect. I could see the young birds turning a kind of yellowish colour through the hen sweating them so badly, and I lost them just at four days old.

In due time I had this hen nesting again, and I kept a close eye on her this time. When it was drawing near the time for the hen to hatch out her eggs I began by giving her a dose of Epsom salts two days previous to bringing the young birds out, and I also gave her salt-water baths as before. The treatment again had no good result, for the hen was just the same with her non-feeding and sweating.

At night of the day of the young birds being hatched I took all seeds away from the cage, and on the second day I gave the hen a small portion of yolk of egg in the morning, and sprinkled a small bit of white sugar on top of the yolk of egg. By doing this I drew the hen off the nest to feed, and she began feeding the young birds. This I did for three days, and then I commenced to give them white and yolk of egg and a little crushed biscuit, until seven days, when I gave crushed hemp, etc., and the feeding came all right.

On the second day, to prevent the hen sweating, I took a large-size nest-pan and knocked the bottom of it right off, leaving just the rim of the nest pan to hold the wire hanger. Then I took a clear piece of strainer and made a nest lining and a shallow nest. I put the young birds in this nest, which enabled them to have plenty of ventilation, and I could see the young birds gaining every day. The hen could not sweat them in this nest, so I managed to rear four good healthy birds. This nest certainly looked very peculiar in the cage, as if I was studying war economy and using half a nest at a time, but all the same it was pleasant to look into the half nest to see four whole young healthy birds.

Thos. Davies.

The Trouble of "Going Light."

Can it be Prevented?

Sir,—Having been a breeder of Canaries for four seasons, with much success on the whole, I would be greatly indebted to any experienced fanciers if they could enlighten me (and at the same time many others) as to the cause of this deadly complaint, and at the same time give a cure for it. Generally speaking, I have had very little trouble in breeding young Yorkshires until they have arrived at the age of six to ten weeks old, but at this age I have lost many a promising youngster.

The symptoms are as follows:—The bird eats greedily, feathers puff out, eyes become dull and heavy, and on examination the breast bone is found to be very prominent. After two or three days' illness they are as dead as a doornail. I have tried many so-called remedies, but without success, and if there is no definite cure I should be relieved if told so.

It will be as well, perhaps, if I roughly outline my method of feeding. Egg food given when young are due, a leaf of lettuce or dandelion on the appearance of young, in addition to egg food. After a day or two I scald some teazle, drying it off in pan before using; I give fresh supplies of all foods three times daily. I find that hens feed excellently on scalded teazle. I give a variety of green foods in addition to the above, such as groundsel and chickweed, etc.

When the young are quite capable of feeding themselves, at about the age of a month, I remove them to a double breeder, giving them plenty of exercise, and a bath regularly, supplying them with egg food, but gradually decreasing the supply of green foods and scalded teazle. Occasionally, in place of the latter, I give some scalded summer rape, until the birds are well on plain seed. At this period it is time to add colour food, with egg bread, for first moult, and I add a little linseed meal to the colour food occasionally until fully through moult.

Once safely through the first moult, they appear to be as safe from death as the German Emperor is from being bayoneted in a charge in France. I have not yet seen this subject of "Going Light" discussed in Cage Birds, and now seems the time to discuss it, and thus prevent, perhaps, a serious loss to fanciers who, like myself, are unable to cope with the difficulty. I hope that some kind fanciers will give us the benefit of their knowledge.

Another Novice.

A Veteran Border Canary Hen.

Nine Years Old, Still Going Strong.

Sir—I was quite surprised when I received my Cage Birds on Friday to find my old Cinnamon-marked Buff hen depicted on the front page although I have been expecting to see her in this position after her 51st first prize at the Cardiff Show. Since then she has stood 1st at Portb, 1st Llanelly, 1st Penygraig, and 2nd Swansea F. and F. S.

It is quite unnecessary for me to write anything further about her, as I gave a short career of her life in Cage Birds about six months ago. But one thing I should mention; this breeding season she has reared a nest of three and is now sitting on a clutch of five due to hatch on Thursday. I think it is a wonderful performance for a hen in her ninth year. Thank you again for conferring another honour on me, and I wish your paper every success. Last, but not least, the greatest praise is due to your able artist, Mr. Norman, for the life-like drawing of her.

D. Jenkins.

In-breeding.

Using it with a Definite Purpose.

Sir,—I am always interested in the correspondence columns of Cage Birds, and have been especially so latterly on the subject of inbreeding. I always consider that as controversialists Mr. House and Mr. Johnson are about a match for each other, and notwithstanding the latter's lack of "credentials" he is certainly no "mug" as regards a Norwich Canary.

To my mind all depends on what you are trying to produce, and so long as your stock keeps healthy what possible harm can there be in inbreeding. Now I have recently acquired a big Norwich cock, with a beautiful head and beak. I am anxious to perpetuate those qualities, and should I have any luck this season, I purpose another season to inbreed with the special object of retaining in my stock the fine head and beak of the cock mentioned, that is, presuming some of the youngsters bred this season are endowed with the same qualities.

I consider that by so doing I am more likely to achieve my purpose than by breeding from unrelated birds. What have Mr. House and Mr. Johnson to say with regard to my proposed action?

"Three Spires."

A Disclaimer.

Sir,—In your issue of Cage Birds for May 26, I see a letter over Mr. C. A. House's signature, re inbreeding, in which he mentions my name, and which I think is very detrimental to me as a breeder of high-class Yorkshires. He says he does not enter into controversy unless he is certain of his facts, and then goes on to say "as for, Mr. Dykes, that gentleman is more of an exhibitor than a breeder; if he cannot win with what he breeds at home, he will, if he can, get it elsewhere. Apart from this he is open at any time to buy, not one good bird, but a dozen, or a score if Mr. Johnson, or anyone else, can find them for him."

Now, Mr. House has never been in my rooms, nor seen my breeding stock, which I consider the finest in the country, and probably the largest for any one man, as I usually run about 60 hens, and am doing so this season, although putting in nearly 60 hours per week on munitions.

I have never empowered Mr. House, or anyone else to purchase a dozen, or a score winners or good birds for me, nor even to find them for me, so I think Mr. House is not so certain of his facts in this case.

I do not wish it to be thought that I am writing this to create the impression that I have bred all my own winners, but I do claim to have bred a very large percentage of them, therefore I consider Mr. House's remark unwarranted and uncalled for.

L. Dykes.

An Out-and-out Believer in Breeding In and In.

Sir,—As a student of inbreeding for well over thirty years I have been deeply interested in the many letters which have appeared in the correspondence columns of Cage Birds, and I have thought that a few lines from a breeder and systematic observer on the effects of inbreeding would perhaps be helpful to some of your younger readers.

Mr. House asks for credentials, rightly so! Not that a fancier has no right to speak or write upon the subject unless he has a life experience, but the success or non-success of those giving their experiences is of some guide to the reader in forming his, or her, opinion which is the best and proper line to take. My practice, like that of Mr. House, has been somewhat varied, but it does not include hedgehogs and mice, although of the latter I have dear recollections of bringing fourteen out of my bird room one night in a bunch. If they had been inbreeding, all I can say is to all appearances they had been quite a success.

Reverting to Canaries I might say that my knowledge gained by trial and practical test extends well over twenty years, whilst the previous ten years or thereabouts were spent in breeding Canarics from winners purchased here, there, or anywhere, so long as they could do the needful; win.

I will deal first with the ten years I was breeding in the dark, so to speak. Although I was breeding with the very best exhibition birds that money could buy, my success as a breeder of winners was at that time almost nil. At this stage I had one set object above all others, and that was to be a "top dog;" hence my reason for purchasing all the winners I could lay my bands on.

This having become an accomplished fact I returned to my old love, inbreeding, which I had previously practised with success in another branch of the fancy. It is fast approaching twenty years since I first began to inbreed with Canaries. I have practised it in a steadfast manner, and my stock today is as much inbred as at any time of my keeping Canaries, yet my birds are larger than those with which I originally commenced which is quite contrary to the theories most people advance.

I followed the lead of Mr. Battye who favours the idea of breeding up to the standard by using typical, good feathered, well bred stock, though they be on the small side, in preference to using big, sluggish stock birds, and breeding down to the standard so-to-speak. My Cinnamon marks have been built round a single bird, a clear, pink-eyed buff cock, little better than a cage bird in size, yet in other respects a real gem, and with judicious selecting of my stock, and applying the necessary discretion in pairing up, I am to-day the proud owner of some of the finest stock birds in the fancy. Not that alone, but during this time of inbreeding I have bred some of the finest specimens that ever graced a show bench, carrying off premier honours at the largest exhibitions.

In the green-eyed section I have done likewise, having bred birds that never suffered defeat whilst in my hands, birds which have carried off the very highest honours at the Crystal Palace, birds which, for size, have out-classed their progenitors, yet the theorist tells us that inbreeding tends to small birds, insufficient in feather, and otherwise weak.

To-day, after a great many years of practical tests, I stand a convert to inbreeding, feeling more convinced than ever that if we are to be successful we must know our stock and know it well. I can honestly say that I breed twenty winners where I bred one in the old days of face-value breeding.

I have often seen it stated that inbreeding tends to sterility, this I do not doubt in some fanciers' hands, but I contend that it has just the opposite effect if one's stock is properly handled. I well remember breeding with a marked buff cock for eight seasons, which was a very prolific breeder. I sold him to a London fancier for whom he sired several winners, and he was inbred. I might also say that my hens produce more eggs than the normal, six in a clutch being far from infrequent, and this I attribute to two causes, viz., careful selection and proper feeding.

After long years of practice I stand more convinced than ever that almost anything can be accomplished by inbreeding. Experience has taught me that face value in a stranger brought into one's room very very rarely produces a fac-simile, no matter what big figure one might have paid for same, whilst on the other hand inferior looking, but well inbred birds are generous in the production of stock superior in face-value.

I have one such instance in my room to-day. I well remember an old fancier looking through my stock four years ago, and he came across this particular bird which had been put aside for stock purposes. He remarked "tha'll nivver breed wi' that; that's nut thy sort I knaw." I assured this fancier that I felt positive that the bird in question would produce some right stuff. Since then I have run him with a distant relation three years in succession, and from this pair I have bred several winners, one a clear yellow cock whose lowest record during two seasons of exhibiting is a third prize, and which was in a letter to me by a very prominent exhibitor, characterised as the best young bird he had seen out that season. This very heavily variegated corpulent buff stock cock, now in his fourth season of breeding in face value has little to recommend him save carriage of wings, pipe tail, and good size, yet he has been the sire of several winners in clears and ticks, both yellows and buffs. So much for inbreeding. I could give many more such instances did time and space permit, but "nuff said."

Tee Bee.

(Some letters unavoidably held over.)

CLUB AND SOCIETY NOTICES.

ONE NOTICE of any forthcoming Society meeting inserted free. It must reach us not later than Tuesday morning's post. Specially printed Club notice Postcards may be had free on application to our Manager. Secretaries should always use them.

NOTE.—Only the details asked for on our cards can be published. Such phrases as "a large attendance desired," etc., must not be included. Classification for forthcoming shows, appeals for new members, and any other matter in the nature of an advertisement will only be inserted if paid for at advertisement rates.

Alfreton C.B.S.—June 9, Red Lion Hotel, 5.30. Table show of young birds. Birds staged by 5.30; Mr. R. Simpson judge; special on each class; other business.—G. Sawer.

Barry F. and F.S.—Aug. 11, Headquarters, 7.30. Owing to so many of our members being engaged on work of National importance, and finding it difficult for attendance, it was decided to postpone meetings until August 11. Show date fixed Nov. 24.—H. P. Thomas.

Beamish C.B.S.—June 9, Bird Inn, High Hold, 6.30. Business important; N.F. Show, June 30.—J. H. Elliot.

Bolton Roller C.C.—June 12, Joiners' Arms, 7.30. Rule books; judges for members' and open show.—T. Ormston.

Bradford West C.B.A.—June 9, Girlington Hotel, 7.30. Members' schedules.—F. P. Terry.

British Roller C.C.—June 12, The Cock and Lion, Wigmore Street, London, W., 7.30. Breeding problems; a hearty welcome to all Roller fanciers.—J. W. Norris.

Chester-le-St. C.B.S.—June 9, King's Head Hotel, 6.30. Confirmation N.F.S. schedule, business in connection with same.—R. Ward.

City and Suburban A.C.B.—June 11, Church Institute, Paddington St., W., 8. Young Yorkshire table show and judging competition.—F. J. Martin.

Clay Cross C.B.S.—June 16, Angel Hotel. Nest Feather show, also class for old birds and Mules, 4.30 p.m. staging; and general business.—F. Harrison.

Codnor Park and Eastwood C.B.S.—June 16, Three Tuns, Eastwood, 7 p.m. Election of officers and arrange for N.F. show.—Smith and Lees.

Crystal Palace and Penge C.B.S.—June 13, Alexandra Hotel, Penge, 7.30. Schedule Y.S.S.; lecture by H. Norman, "British Birds." Friends invited; audit books.—W. D. Fryett.

East Ham C.B.S.—June 14, Town Hall, 8. Demonstration of colour food mixing, by Mr. W. L. Taylor. Arrangements for ramble, June 17, and F.F. show, June 23.—H. J. Kybert.

East Ham F.S.—June 8, New Headquarters, Hasler Memorial Hall, Green Gate, Plaistow, opposite Free Library. General meeting; 1st show, Saturday, June 23.—E. Winser.

Gt. Horton O.S.—June 9, Station Hotel, 7.30. Business for 1st members' show. Schedules will be ready.—F. Hodgson.

Hirst East End C.B.S.—June 9, Social Club, 7.30. Business important; to take new members and subs.—Wm. Hall.

Huddersfield O.S.—June 14, White Hart Hotel, 7.30. Selecting room for open show; delegates' report and other business.—A. Lawford.

Hull C.B.S.—June 9, 2.30, Oddfellows' Hall, Charlotte St. N.F. show; final arrangements re ramble.—W. Furnandiz.

Larkhall C.B.S.—June 9, Y.M.C.A., 7. Fixing date of annual show.—A. Kerr

Liverpool B.B.A.—June 14, Oldham Hall, 8. Lecture, "Preparing Birds for Exhibition," by Mr. W. Young, also "Preparing Egg Food," by Mr. T. Plunkett. Syllabus for July, Aug., and Sept.—T. R. Jones.

Lochgelly C.B.S.—June 16, Ante-room Drill Hall, 6. Of the utmost importance.—W. Grewar.

Manchester and N. Counties O.S.—June 11, Deansgate Hotel, 8. Nest feather show business, etc.—F. Wilkinson.

Morley C.B.S.—June 9, Shoulder of Mutton, 7.—B. Cook.

Nantymoel, Ogmore Vale C.B.S.—June 13, Ogmore Hall, 6. Selecting judges for F.F. show.—T. Davies.

Newcastle C.B.S.—June 14, Shield's Cafe, Bigg Market, 7.30. Business very important, in regard to holding an open show.—F. W. Laidlow.

North West Glasgow C.B.S.—June 12, 308, New City Road, 7.45. Replies from judges and hat or question night. Ramble on June 16 to Cathkin. Members meet at Burnside Car Terminus at 4.—P. Houston.

Keighley C.B.S.—June 12, Black Horse Hotel, 7.30. Business very important.—J. Bower.

Open Norwich Plainhead Club.—June 16, Oddfellows' Hall, Thornton Road, 6.30. Arranging specials, shows, etc., and any other important business. Societies wanting our patronage write at once to S. Wilcock 16, Back Manor Street, Eccleshill, Bradford.

Openshaw Gorton C.B.S.—June 13, Room, back of stage, Alhambra, Higher Openshaw, 8.30. F.N., June 30; schedules ready; latest date, June 27.—A. W. Newton.

Porth and Rhondda Valleys C.B.S.—June 9, Llwyncellyn Hotel, Porth. F.F. show, 5 till 10; judge, Mr. J. Hoare.—A. H. C. Legg.

Plumstead and Woolwich C.B.S.—June 12, Trinity Schools, Beresford Street, Woolwich, 8. Minutes; arrangements for young stock show; other business to clear up.—G. H. Macleltan.

South London Col. and F.A.—General meeting and election of annual judges, June 14, 7.30. Headquarters, Druids Head, Deptford Broadway, S.E.—F. Tottle.

S. Shields "Always Ready."—June 13, Hunt's Shop, Ocean Road, 7.30. Consider specials for Young Bird show.—J. W. Watson.

Springburn and Possilpark C.B.C.—June 13, Reid Hall, Queenshill St., 8. Hat night; ramble to Cathkin Braes, Saturday, June 16; meet at Fire Station at 3, or Burnside Terminus at 4.—A. Hamilton.

Walton and Everton C.B.S.—June 13, Kilshaw St. Misson Room, 8. Table show of British birds; judge, W. Leadbetter.—J. Lloyd.

Wigan Roller Club.—Legs of Man Hotel, meeting postponed until June 16, at 7.30. Business important.—P. Greenall.

Country Rambles

The first ramble of the season of the Maesteg C.B.S. took place on May 29, beautiful weather prevailing when a start was made from near the Town Hall. The number of starters might have been better, and those that were absent missed a treat; several members no doubt were taking advantage of the holiday to snatch a few hours by the seaside. The route selected was tho well-known Margam Route, where bird-life was seen at its best, especially among the smaller birds; though some of the larger species were also seen. We worked Llestwen woods on both sides of the brook, starting from Gellilenor farm, for some considerable distance until we reached the roadway leading to Margam.

The first find was credited to Mr. T. Griffiths, the youngest member of the party, a Blackbird's nest with four bonnie young, and judging by their appearance food was fairly plentiful in that part. We now wended our way back across the fields towards Llangwynwd village, well-known throughout Wales as being the home at one time of the Maid of Cefn Ydfa, who now lies buried within its church. A few Linnets were seen, but we were unable to locate any of their nests, and the Cuckoo was heard to advantage. Reaching the highway, a walk of about a mile brought us to the village where a halt of about an hour was made, and refreshments were partaken of. We had now travelled a number of miles without having seen an egg, each nest containing young. Our next move was made in the direction of Tondu, the idea being to inspect the old ruins of Cefn Ydia, but we had only gone some little distance when a thunder storm of unusual severity swept over the district and put an end to rambling for the rest of the day. We, therefore, retraced our steps towards home, wet and tired, but nothing daunted, and at Garth railway station we parted, after having spent a most enjoyable day among the wild birds.—Chas. Williams, Sec.

THROUGH DELIGHTFUL SURREY

The annual ramble of the National British Bird and Mule Club took place June 2 to Gomshall and Shere, Surrey. The train left London Bridge at 9,55, and reached Gomshall at about 11. Fine weather favoured the company, amongst whom we noticed the old familiar faces of Messrs. Robson, Carr, Vale, Cooper, Trower, Cook, Sanders, Peck, etc.

Arriving in an ideal spot for bird life, all thought they were in for a good time. Hillside, lanes, meadows, commons and woods were well searched for nests, etc., but the results were most disappointing. A strong wind during the afternoon certainly tended to keep birds under cover, and very few nests were found. About 37 species of birds were seen and heard, the most prominent being the Willow Wren, Nightingale, Greater Tit, Blue Tit, Long-tailed Tit, Greater and Lesser Whitethroat, Blackcap, Chiff Chaff, Wren, Pied Wagtail, Garden Warbler, Flycatcher, Goldcrest, Tree Pipit, House and Sand Martin, Swallow and Swift.

What was lacking in bird life was compensated for by the lovely display of various butterflies, wild flowers, and ferns. It is many years since such an enchanting display was encountered in our rambles. After covering about six miles amidst a splendid panorama of scenery the company went in good form for the substantial tea provided at the Old White Horse Hotel, Shere, to which ample justice was done. Previous to sitting down, the club despatched a wire to our old and esteemed wounded member, Allen Silver, at Newport, Mon., sending him good wishes and wishing him a speedy recovery.

A mile walk from the lovely village of Shere to Gomshall Station found the company ready for the 8.4 train to London, which was reached about 9.40. Although the display of bird life had been somewhat disappointing, everyone was enthusiastic with the charms of this delightful neighbourhood. The results of the ramble bear out the serious inroads the late cold winter has made on wild bird life.

On Saturday, June 16, the ramble will be to Hatfield and district. Train leaves King's Cross at 1.45. Fanciers and friends welcome. J. R. Trower, hon. treasurer, L.B.B. and M.C., 442, Caledonian Road, London, N.

"Food."

THE GREAT NEW NATIONAL WEEKLY.

A practical journal which shows how to grow our own food.

The profitable rearing of Poultry and animals which help to fill our food bill is dealt with each week, and invaluable advice is given to those who have started to produce home-grown fruit and vegetables.

No one with a garden, large or small, should be without this wonderful penny-worth, and the small holder will find in it a veritable treasury of practical knowledge.

Every Thursday 1d.

Advertisement forms and specimen copy sent post free on application to "Food" Offices,

154, Fleet St., London, E.C., 4.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. Kills all insects. Harmless to everything else.

Queries Answered

For Rules see last week's issue.

CANARY QUERIES

Answered by CLAUDE ST. JOHN

RED-EYED ROLLER.

D. J. W.—The bright red eyes, as you term them, are undoubtedly analogous with what we in England call the pink-eye, and as such are the hall-mark of Cinnamon blood in the hen. You do not mention anything about the general colour of the plumage, but this is, I surmise, more of a dun or dove colour than the ordinary yellow or buff colour of the Canary, this peculiar colour being what is termed cinnamon colour. Unless the cock with which the hen was mated also had more or less Cinnamon blood in his veins, it is certainly remarkable that the young of the hen should also possess the red eye, as the pink-eye or the cinnamon hue is not in any ordinary circumstances transmitted by the hen alone. The bird would not be of any greater intrinsic value on account of the colour of its eyes.

ALARMING SYMPTOMS.

C. SIMPSON.—There can be little doubt that some abnormal occurrence took place in the passage of the egg from the ovary to the oviduct the effect of which will probably be to put a stop to the hen's breeding career for the rest of the season at least, but the way it will terminate cannot be foreseen; very often this trouble ends the breeding career permanently. You can only leave the remedy—such as there may be—to nature, but you may do something to relieve the diarrhœa by giving six drops of syrup of rhubarb and a crystal of sulphate of soda the size of a small pea for one day only, and after this four drops each of dilute sulphuric acid, tincture of gentian and tincture of opium daily until the symptoms are relieved. You should endeavour to clear the mice out of the room. Their presence there is always most objectionable, but it would not necessarily be the cause of this trouble with the hen. The ordinary seed diet may be given, but add to it a morsel of bread and milk with two drops of the oil you are using on it every second day for a fortnight or so, and on the alternate days a little seedy chickweed or groundsel, but do not give any dandelion at all to this hen.

CAGES AND SWEATING.

A NOVICE (Bedworth).—(1) As a rule most of the single breeding cages sold in shops are somewhere round about the size you give, though they vary a little in length. The full standard size, so to speak, is 20 in. long, with the same height and depth as you give. The pattern you describe, without any sand tray or any other means of removing the dirt, except through the door, is the cheapest and most objectionable type. It is well worth the little extra cost to have them made with proper sand trays to draw out for cleaning, as it is not only a great aid to cleanliness, but saves a very considerable amount of disturbance of the birds. Removing the dirt through the door with a small scoop or scraper is a most objectionable procedure during the breeding season, especially with highly-strung, nervous hens. (2) You may quite safely continue giving steel to birds in soft moult two days in every three for a fortnight, and after that every second day until the feathers cease dropping, even if the whole course lasts five or six weeks, which is not often the case. (3) Practical experience, coupled with close observation and familiarity with the birds will enable one to tell the sex quite apart from the song with a large amount of certainty, but there must always be cases which are puzzling even to the experienced. In comparison with the hen, the cock has a bolder and more defiant appearance, the eye is more bolting, the "tweeting" more short, incisive, and liquid than the drawn-out and harsher note of the hen. When the birds are in breeding condition a fairly good judgment may be made from the appearance of the vent, that of the cock being more prominent and pointed than that of the hen, which is flatter and more in a line with the abdomen. (4) Hens that are incorrigible "sweaters" are best discarded altogether, to avoid the possibility of implanting the taint in the stock as an hereditary defect. If of exceptional typical qualities, the most rational method, supposing one intends breeding with them, is to provide a few common foster hens and transfer the young to them to be reared. But with young or nervous hens the type of cages described in No. 1, are by no means unlikely to turn a passable parent into a "sweater." If the cocks have hitherto been left with the hens during the period of incubation, try removing them, and leave the hens to hatch out and rear the young by themselves. You will find several replies in last week's issue, notably, to "Will Pill," and "Nat," giving fuller details for combating this trouble, which I need not repeat.

LEAVING NEST PREMATURELY

ROLLER.—I take it you are using the ordinary nest pans and hanging them on the wall or other supports in the same way as you would place them in a breeding cage. This is certainly not a good method for use in an aviary where the birds have liberty to fly about, as there is always the risk of the young fluttering over the side of the pan as soon as they begin to clamber on to the side of the nest to meet the parents returning with food. When nest pans are used at all it is best to place each one on a small shelf or bracket, which may be easily made by nailing together two small pieces of wood at right angles, with a hole bored in one to hang on the wall. This, of course, means you would require pans with more or less of a flat bottom, or otherwise you would need to turn out a round hole into this shelf into which you could drop the pan up to the rim. In either case this gives a small platform all round the pan itself on to which the young bird drops if it stumbles over the side of the nest before it is able to use its wings sufficient to return. But the best method of all would be to employ the small wicker travelling cages used for Roller Canaries as nesting sites, as frequently advised in this column for use in aviaries. These you can simply hang on the wall after removing the seed box, perches, water-pot, and, most or all of the short bars at the end where the seed-box was. Nursery cages would serve very much the same purpose, or cages similar to the wicker ones might be quite easily improvised. In the absence of anything of a more permanent description, fix up a piece of board about eight inches square immediately beneath each nest pan to catch any young that may topple over, and be careful not to scare them when they begin to get fairly well fledged.

YORKSHIRES DYING.

A. N.—There is nothing whatever in your letter which gives me any clue to the probable cause of the death of the birds, though it is quite certain that the safflower seed of which you enclosed sample would not be the responsible agent. Sturdy, rank-grown dandelion has been known to give rise to serious trouble, and even death, but this almost, or quite, invariably occurs among hens that are going to nest and not after they have commenced sitting. I can only suggest that possibly the deaths may have occurred from a sudden chill setting up pneumonia, or, if the birds were mated with newly introduced ones without quarantine, it may have been due to some infectious disease. The one and only satisfactory method of discovering the truth was to have sent one of the bodies for post-mortem, as per instructions under that heading. I would advise you to make a point of doing this in case another death occurs under similar circumstances.

LAYING UNSHELLED EGGS.

M. C.—Errata: Please note that in reply last week a line of type seems to have been inadvertently omitted between the fifth and sixth lines. It should have read "four drops each of dilute sulphuric acid, tincture of gentian, and tincture of steel," and so on.

A SUDDEN TERMINATION.

NO NAME.—The only way to have got a really reliable opinion as to the cause of death was to have sent the body at once to our Mr. Yates, as per instructions under the heading post-mortems. There is just a possibility that it was due to a bacterial disease, but this would imply either that the bird was infected after it came into your possession or very shortly before you bought it. But in either case the cage it occupied should be thoroughly disinfected before another bird is put into it if this surmise were correct. Apart from this the most likely thing was a chill, with broncho-pneumonia supervening, but in this case I should have expected more pronounced symptoms than your letter suggests.

REMOVING COCKS, ETC.

A. SCOTT.—(1) It sometimes happens that a hen will leave the nest and refuse to sit when the cock is removed from her, and in these cases there is nothing for it but to let him remain, unless you should by chance have a quiet old hen or cock, which is unmatched and then it will often answer if this odd bird is put in the place of the cock removed. Another plan which will sometimes answer is, to let the hen sit for a day or so, that is, until she has got thoroughly broody, and then take the cock away quietly in the evening. Then you must take particular notice of her last thing at night and next morning to see if she leaves the nest and shows no disposition to return. If this happens, the only way out is to return the cock and leave them together. You can do nothing to compel a hen to sit when she has not the desire to do so. (2) You could improve upon your feeding either by adding a fourth part of bulk of the staple of summer rape, or giving

(Continued on next page).

a little rape separately daily. Give a teaspoonful of the seed mixture you will see frequently advised in this column to each pair three times a week and egg food daily when young are in the nest, and twice a week at other times. Give a little green food daily during the summer and vary it according to the season. For the fullest details of feeding all the year round you should get our Manager to send you a copy of "Canary Breeding for Beginners," 7d., post free. (3) It is the custom of many fanciers to give a clean nest when the young are about a fortnight old. This, however, is not essential, and may be determined by the condition of the nest—that is, if it is dirty and unsightly you may give a clean nest of cowhair, but it is neither necessary nor advisable to interfere with the felt lining at this time, unless, indeed, you had a spare nest pan of the same size and type, when there would be no harm in preparing the nest beforehand and transferring the young to it, destroying the dirty nest, cleaning the pan and fixing it up afresh for another pair when required. (4) Canaries bred and reared under normal conditions of temperature are quite able to withstand the cold of any ordinary English winter in an open air aviary, and will thrive under such conditions, especially if the aviary has one portion covered in so that they can seek shelter from wet or cold winds if so disposed. (5) Sorry, but it is not possible to give plans for aviaries in this column. You should get our Manager to send you a copy of "Aviaries, Birdrooms and Cages," 2s. 3d., post free, wherein you will find full instructions and plans for this kind of work.

SWELLING ON ABDOMEN.

A. McKIE.—You ought to have given much fuller details about the substance, its size, colour, general appearance and described its actual position as closely as you could. Without such information it is most difficult to even hazard a guess as to what the mischief is without seeing the bird, as you will all the more readily understand when a medical man, with the advantage of seeing the bird, does not express a definite opinion about the cause of the swelling. Anyway, you cannot do any harm by painting the substance slightly with a feather or small camel-hair brush dipped in tincture of iodine, four times with an interval of four days between each application. If this does not cause the substance to be asborbed, write again and give the fullest particulars you can, and I will do my best to help you further.

DANDELION SEED HEADS FOR YOUNG.

SALOPIAN.—(1) Provided the use of the dandelion in unlimited quantities does not force the hens to re-commence nesting before the young are able to look after themselves, I see no objection to the hens having as much as they like, seeing that they prefer it to anything else for feeding the young. See that it is given freshly gathered, and I do not think it is at all likely to be responsible for the slight looseness you notice. To correct this add a sprinkling of carbonate of bismuth to one supply of soft food daily; do not add any excess of sugar to the soft food, and mix with the bread or biscuit, whichever you may use in making the egg food, a little crushed arrowroot biscuit. (2) As the loss of voice has come on since he was mated you should look into it to see whether he is more exposed to cold draughts or extreme fluctuations than in his former quarters. If so, try to protect him from this effect. Then every second day for a week or so you may add to the drinking water ten drops of lemon juice, two of pure honey, and as much chlorate of potash as will cover a sixpence, and on the alternate days give a morsel of bread and milk with two drops of cod liver oil emulsion on it. It will not matter about the hen helping to dispose of these items, but I would not advise any further dosing whilst they are together.

DULL YORKSHIRE COCK.

D. E. D.—You do not give sufficient details of the symptoms for me to say much definitely about the health of the Yorkshire cock. The lack of vigorous song does not necessarily indicate either ill-health or that the bird would not be suitable for breeding, and the frequent opening and shutting of the beak, if unaccompanied by any other symptoms, may be due to sheer nervousness, or it may be due to a slight catarrhal cold or to bronchial trouble. Judging from your description I should imagine that the birds are a suitably matched pair, the cock being a buff and the hen a yellow. Whether the cock is old or young you might judge from the condition of its legs and feet, large coarse scales and thick blunt toe-nails being generally indicative of age. With regard to your separate questions: (1) Yes, in all probability. (2) Without more details of the bird's condition and symptoms, if any, shown it is impossible to say definitely what is wrong with the big bird. The above leading remarks might help you to judge. (3) The above remarks will tell you how to form an idea as to whether the bird is old. For reasons given in No. 2 I cannot say whether he is diseased or unfit for breeding. The lack of song does not necessarily imply this. (4) Again for reasons in No. 2 I cannot tell why he does not sing. Good vigorous song is certainly the ideal breeding condition, but is not absolutely essential to success. (5) If not quite satisfied in your own mind about the condition of the bird by all means return it whilst you may. I have no doubt whatever the vendor would prefer that course and be pleased to exchange the bird, and it would be much more satisfactory to both sides than to risk losing confidence in future dealings. (6) If you decide to keep him, keep in a fairly warm and equable temperature, and in addition to the staple seed diet give a morsel of bread and milk sprinkled with soft sugar daily for a week or so, and meantime write again and give the fullest particulars you can about the bird, and I shall be pleased to help you as far as possible.

BRITISH BIRDS, MULES AND HYBRIDS

Answered by H. NORMAN.

HAND-REARING CHAFFINCHES.

CHIFF-CHAFF.—Young Chaffinches are not particularly easy birds to hand-rear, but it can be managed with care. Do not take the young at too early an age from the parents; remember the food they are giving them is far better than any you can supply, and wait until they show their feathers nicely. Mix two Osborne biscuits to the yolk and half the white of a hard-boiled egg, and beat up very finely with a thin fork. Take a small quantity of this mixture and make to a thin paste with new milk. See that it is perfectly sweet before using. Make it fresh as often as possible. As the youngsters grow add a little soaked rape to the mixture. Prepare the rape by soaking in cold water, changing the water daily until the seed commences to sprout, when it is ready for use; dry it in a cloth before mixing it with the egg food. Gradually increase the quantity of rape until they can peck up, and then offer other seeds soaked and cracked, such as canary, rape, hemp, maw, etc. From the first the young ones should be given pieces of mealworms, some house flies, small caterpillars, and other insects, and a few good ants' eggs should be mixed with the egg food if they can be obtained. One may sometimes manage to procure a few live ants' eggs, and these are particularly good for them. Keep the little ones warm by covering them with a piece of flannel, and give the first meal early in the morning. Do not cram them, feed with judgment, but the last meal at night should be a rather heavy one. Put a pinch of fine grit in the soft food occasionally.

USING HEN MULES.

POWER & CO.—All hen Mules will not nest, but some do so, and will make quite as reliable mothers as Canaries. If you have an aviary and a spare cock Canary you could turn them in, and doubtless some of them would soon show signs of nesting. You could let them set on their own eggs and change them just before hatching with the eggs from any known, reliable Canary hens. When they once commence to feed the young, they generally do it pretty well. (2) "Unflighted" is a term applied to a bird that has not moulted its flights, that is, a bird that has only had one moult. After the second moult a show bird is no longer eligible for the unflighted classes.

HAND-REARING RED-BACKED SHRIKE.

SHRIKE.—You can hand-rear a nest of Red-backed Shrikes providing you are willing to give them all they require in the matter of food and attention. They should be taken just as the quill feathers are nicely formed. Late in the evening is the best time, so that they have their first feed early in the morning. This should consist of hard-boiled egg and powdered biscuit, with a spoonful of good ants' eggs. Take a small quantity and make rather sloppy with new milk, and feed every hour at first, and later every two hours. As they grow, mix with the egg and biscuit some best insectile food, which will be their principal food when feeding themselves. From the first they should have insects, pieces of mealworms, caterpillars, beetles, etc., and a little scraped raw lean beef or mutton or rabbits' flesh. When grown up, young Sparrows and mice are greatly relished, and you must remember that without food of this nature they will not thrive. These should be offered as soon as killed. It is a good plan to soak the raw meat in a saucer of water to wash out the blood, as this appears to upset the birds if given in any quantity.

BULLFINCHES IN AN AVIARY.

A BEGINNER.—I fancy if your pair of Bullfinches act up to their natural instincts they should rear their young ones on the food you are now giving them, although it would be as well to offer a little soft food in addition. A daily supply of egg and biscuit, or soaked rape dried off with a little powdered biscuit. You should collect bunches of wild food such as chickweed, sow-thistle, groundsel, and all kinds of seeding grasses; get the sow-thistle from near the hedgerows or under trees, as when growing in these positions it is usually infested with green fly, which is just the food that is required for the young one. If you are fortunate enough to get young and rear them, they could be left in the aviary over the moult, if they all agreed; they would moult out better in colour than if moulted inside. (2) Do not overdo the salts. A dose occasionally when the birds appear to be dull is quite sufficient.

HAND-REARING HAWFINCHES.

S. W. F.—You will have no difficulty in hand-rearing young Hawfinches, and on the method advised for rearing Chaffinches in this issue. Carefully follow all the instructions, and when they start to feed themselves offer cracked hemp and sunflower, canary, a little soft food, a few garden peas, with seeding shepherd's purse and chickweed, also one or two mealworms. Later on sunflower will be their principal food; get it sound and plump, with good full kernels. They will live on this and a mealworm or two every day, but it is as well to offer a little hemp, safflower, linseed, canary, oats, wheat, dari, summer rape, maize, etc. They will also eat various other things, and one can easily make a change in their diet by offering the different seeds and berries as they come into season. Keep in nice roomy cages, and let them bathe freely.

SAMPLES OF SEEDS.

S. M.—The samples of canary seed are both good ones, No. 1 being particularly bright and clear. Rape is good. Linnet mixture should have an extra quantity of canary added and an equal quantity of teazle. Finch mixture should also have teazle added. The canary mixture is good, but would be just as well without the millet. The Lark food is all right for the bird to peck over in addition to his usual soft food, although whole seeds are considered to be better. You omitted to send your name and address.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S.

TALKING CAPACITY OF INDIAN PARROTS.

PARROT NOVICE.—All the Indian Green Parrots have the power to form and utter words, but vary considerably in the extent to which they use it. There is no royal road to achieve this end. From your description you have a young bird, and it should ultimately talk if you expend a little time upon it. Little can be done in the teaching till it is fairly tame and thoroughly accustomed to those around it. Most of the talented Parrots we hear of have picked up their vocabulary for themselves; their cages have stood in the midst of the home life, and they have copied the sounds and words they heard. Thus a Hawk-head Parrot of mine became a very talented talker; now, alas! he is no more. I have heard Parrots kept in the vicinity of children, which have not only uttered amusing childish prattle, but have mimicked their joyous laughter and also their tears and sobs when they were in disgrace. At the same time, till a bird is thoroughly at home to its surroundings, you must avoid it getting scared by too much of the vim and vivacity of young folk around; the time will come when it will enjoy these, but it must not be teased, or it will become a bad tempered screamer. Much depends on the temperament of the individual bird, and more still on the judgment and common sense of its trainer. When it is tame and steady you can also teach it, when it is in quiet and restful mood, by the constant repetition of such words and phrases as you wish it to repeat. Also, when offering it some tit-bit, accompany it with some such remark as "Something nice for Polly." On these lines, with kindness, patience, and perseverance, you should ultimately have a talking Parrot of more or less talent.

SCARCITY OF MILLET.

J. GRIFFITHS.—Budgerigars and Cockatiels will do well on canary seed and white oats (crushed or whole) and unlimited green food. However, as they are accustomed to this, continue to supply it as long as it is obtainable (you can use all three kinds, Indian, white, and red), but when making your mixture use two or three parts (by measure) of canary to one of millet, and keep a pan of oats continually in the aviary. At this period of the year supply the flowering and seeding heads of any of our indigenous grasses, as green food, ad lib. You can also supply, in addition, groundsel, chickweed, dandelion, etc. The birds prefer the weeds when they possess not only leaves, but also flowers and partially ripened seeds. When the winter period comes round sweet apple and frame lettuce are the best green food. Biscuit crumbs or broken pieces of same can also be supplied. At the same time it would be well for you to get in what stock of millet you can from several sources. Consult our advert. columns under the head of Foods. Hope your boys will return safely to enjoy the peaceful pleasures of aviculture once more.

FEEDING A YOUNG KING AMAZON.

M. TOWNSEND.—A mixture of canary seed, oats, hemp, safflower, and sunflower seeds and shelled pea nuts would suit your bird well. Get a quart of each and well mix together, storing same in dust-tight receptacle in any dry cupboard, etc.; also supply ripe fruit and any kind of shelled nuts it cares for (Barcelona and walnuts are as good as any), biscuits, and you can continue the rice (boiled in water) and chemical food. Also keep cuttlebone, grit, and a chunk of wood continually in the cage. Give every fourth day, for a month at least, one teaspoonful of fluid magnesia in the drinking water, and on the intermediate days lightly colour the water with the chemical food. Ten drops of cod-liver oil emulsion mixed into the daily supply of boiled rice will also prove a good conditioner. Keep the cage very clean, and if it appears to need a stimulant of any kind give it a few sips of weak brandy and water (tepid) occasionally. Keep it out of draught, but where it will get plenty of light and air. It has, most probably, not yet fully recovered from the hardships of importation.

DULL AND INACTIVE AMAZON.

DULLARD.—The seed mixture and other items of dietary advised to M. Townsend in this issue will meet the requirements of your bird fully, and as yours is a fairly new acquisition also give fluid magnesia and chemical food as advised to that correspondent. Also give cod-liver oil emulsion (ten drops) with the daily supply of boiled rice (boiled in water only). Thinly spread a little honey and borax on the toast crusts, say for as long as a small box (procurable from any chemist) lasts. Spray its nostrils with a dilute solution of glyco-thymoline. Keep strictly out of draught, but not away from light and air. You should find "Parrots for Pleasure and Profit," 7d. post free from our manager, of much help to you in treating your bird. Shall be pleased to hear how it progresses.

DISCHARGE FROM NOSTRILS.

MRS. BURNARD.—You must continue with the treatment already advised. If it would permit you to handle it, first sponging the nostrils with tepid water containing a little Condy's Fluid, and then bathing with the glyco-thymoline solution would be much more efficacious than spraying. The sides of the face could also be bathed with the water containing Condy's Fluid, and then wiped over with a dilute rose water and zinc eye solution, but the latter is rather risky to use as a spraying solution. It will greatly benefit your bird if you can get it to take honey and borax once or twice a day, either from the end of a stick or thinly spread on biscuit, bread, or plain cake. Give it a few sips of tepid brandy and water (say 3 drops of brandy in a teaspoonful of chilled water) twice a day, for about a fortnight. I think, in spite of your fears, the bird is gradually improving. The above are merely additions and slight modifications to the treatment already advised, and to be used in conjunction with same. If unexpected adverse symptoms should develop it would be better to take it to a vet. at once, and not lose time waiting for a reply per post. I shall be pleased to hear how the bird continues to progress.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 1, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. The Post Office regulation is that bodies of birds must be sent at the letter rate of postage, and must be packed in hermetically-sealed receptacles which must themselves be enclosed in strong wooden, leather, or metal cases. If this regulation be infringed the packets may be destroyed by the authorities. **Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.**

D. I. P.—Heart failure following congestion of the lungs, attributable to the heat and probably the storm experienced the previous night.

PENHITE.—Regret to state "septic fever." Do not introduce any new birds. It is doubtful whether any of the remaining birds will weather the storm. Isolate diseased from apparently healthy stock, and take measures to disinfect everything very thoroughly. One of the "Nutshell" series, Disinfection of Cages and Aviaries, obtainable from this office, will give you full particulars.

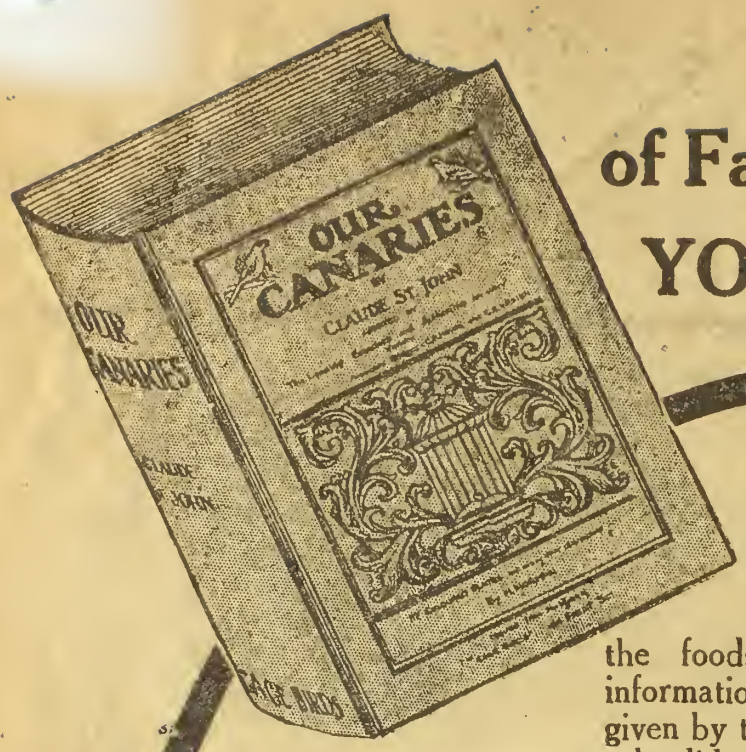
GENERAL.

Answered by THE EDITOR.

ON MAKING A START.

ANOTHER STICKER.—You send neither your own name and address as authenticating your letter, nor the name (in confidence) of the person referred to therein. If you will supply these we shall be pleased to insert your letter. At the same time, however, we would point out that it was a little unreasonable to expect "topping" pairs of birds at £1 per pair or "champion" cocks at 10s. each.

SECRETS
of Famous Canary Breeders
YOURS for only 1/- down



Judging the position of a bird by the clock.

HOW well-known Canary Fanciers bred their prize-winning birds—birds literally worth their weight in gold—how they trained them—the foods used. All this priceless information and much more is clearly given by the Breeders themselves in this splendid Canary Book. Every page—every line—is full of the *practical experience* of practical men—experts in their line. Fanciers who have specialised in Lizards give valuable information. Breeders of famous prize-winning crested varieties contribute to its 380 pages. Every feature of Canary Breeding and Exhibiting is clearly and fully dealt with—you have only to glance at the comprehensive index to turn up the information you desire.

The book contains 133 illustrations, a few of which are here reproduced. Thus, "Our Canaries" not only *tells* you but *shows* you. If you are a novice, or breed only for pleasure, you will be delighted with the increased enjoyment which the book will enable you to derive from your hobby. If you are an "old hand," or breed for profit, it will help you to *increase* profits.

"Our Canaries" will be sent you for Free Examination—Approval for a deposit of only 1/-. If, after examination, you return the book, your deposit will at once be refunded. If, however, you decide to keep the book, you can pay the balance by easy monthly instalments. Thus you have everything to gain and nothing to lose by sending for a copy. Do so TO-DAY.
